PT	Use of G protein-coupled receptor ligands - for modulating prolactin	
PT	secretion or placental function, e.g. for treating menopausal syndrome,	
PT	tumours, autoimmune disease or abnormal pregnancy.	
XX		
PS	Disclosure; Page 71; 241pp; English.	
XX		
CC	The present sequence represents a probe used to screen for cDNA encoding	
CC	a G protein-coupled receptor protein. The specification describes an	
CC	agent for modulating prolactin secretion which comprises a ligand	
CC	polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein.	
CC	The agents for promoting prolactin secretion can be used for treating or	
CC	preventing hypovarianism, gonocyst cacogenesis, menopausal syndrome, in	
CC	euthyroid or hypometabolism. They can be used for promoting lactation in	
CC	a domestic mammal and as an aphrodisiac. The agents for inhibiting	
CC	prolactin secretion can be used for treating or preventing pituitary	
CC	adenomatosis, brain tumour, emmenopathy, autoimmune disease,	
CC	prolactinoma, infertility, impotence, amenorrhea, galactorrhea,	
CC	acromegaly, Chiari-Frommel syndrome, Argonz-del Castillo syndrome, Forbes-	
CC	Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The	
CC	modulating agents can also be used as contraceptives. The agents for	
CC	inhibiting placental function can be used for treating or preventing	
CC	chorioncarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,	
CC	abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia

CC The core region of human NK1R sf was isolated by PCR and sequenced (see
CC AAQ30774-Q30778). The antisense primers hsp345, hsp341, hsp342,
CC hsp341 and hsp342 (AAQ30784-Q30788) were synthesised based on the human
CC core sequence. Human glioblastoma mRNA and each of these primers were
CC used in first strand cDNA synthesis to produce the template for a primary
CC PCR amplification. Primer hsp345 was used with 2 rat sense primers r3p1n
CC and r3p1n (AAQ30779 and AAQ30780) for the primary amplification. The PCR
CC product was then used as template for secondary PCR with the same rat
CC primers and the human antisense primer hsp344 (AAQ30783). The secondary
CC PCR product was the template for tertiary PCR amplification, again using
CC the same rat sense primers but with human antisense primer hsp341
CC (AAQ30782). The amplified DNA fragment hybridised to hsp342 (AAQ30781),
CC indicating it is not a non-specific by-product. The DNA was sequenced and
CC found to encode the human NK1R sf N-terminal region and also contains a
CC 5' UTR. (Updated on 25-MAR-2003 to correct PN field.)

CC Double-stranded cDNA was prepared from human glioblastoma mRNA and large-
CC size cDNA was ligated to EcoRI linkers. Linker-ligated cDNA was then
CC ligated to the calf intestinal phosphatase-treated EcoRI site of the
CC vector Bluescript SK+. The ligated plasmid DNA was used as template in a
CC primary PCR amplification with human primers hsp341 and hsp342
CC (AAQ30789 and AAQ30790) and the vector-specific primer t3 (from
CC "Stratagene"). The primary PCR product was used as template for secondary
CC PCR with the human primer hsp343 (AAQ30791) and t3. The product of this
CC reaction was amplified in a tertiary PCR amplification with hsp344
CC (AAQ30792) and vector-specific primer SK (also from "Stratagene"). A
CC 400bp DNA fragment was detected which hybridised to human oligoprobe
CC hsp345 (AAQ30793). This fragment was subcloned and sequenced. It was
CC found to encode the C-terminal region of human NK1R sf and also contains
CC 3' UTR. (Updated on 25-MAR-2003 to correct PN field.)

PT New recombinant human neurokinin-1 receptor - used to detect and evaluate  
PT substances that bind to substance P receptor, and to determine substance  
PT P in body fluid of arthritis patients.  
XX  
PS Disclosure; Page 8; 35pp; English.  
XX  
CC The sequences given in AAQ29670-82, AAQ29783 and AAQ29746-48 are primers  
CC which were used in the isolation of fragments of the human neurokinin-1  
CC receptor (NKIR) cDNA. Human NKIR is a membrane receptor for the  
CC neurotransmitter substance P. The primers were designed using regions of  
CC the human NKIR cDNA and also regions of the rat NKIR which were thought  
CC to be similar to human regions. Part of the human cDNA sequence was  
CC derived by amplification using these primers. The remaining part of human  
CC NKIR cDNA was obtained from a human cDNA library utilising portions of  
CC PCR generated fragments as probes. See also AAQ29749. (Updated on 25-MAR-  
CC 2003 to correct PN field.)

XX New isolated nucleic acid with at least one polymorphic position, useful  
PT for detecting, diagnosing and treating disorders such as angioedema,

PT cancer, viral, bacterial or fungal infection, cardiovascular and  
PT autoimmune diseases.

PS Disclosure; Page 717; 977bp; English.

XX The invention relates to an isolated nucleic acid from a human gene  
CC encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDKRB1),  
CC tachykinin receptor B1 (TRACR1), C1 esterase inhibitor (C1NH), kallikrein  
CC 1 (K1K1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme  
CC 2 (ACE2), or protease inhibitor 4 (PI4), comprising at least one  
CC polymorphic position. Also included are (1) a probe that hybridises to a  
CC polymorphic position as provided in the detailed summary of single  
CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic  
CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising  
CC the sample from one or more individuals and determining the  
CC nucleic acid sequence at one or more polymorphic positions in a gene  
CC encoding a protein selected from the group above; (3) constructing (M2)  
CC haplotypes using the genes comprising grouping at least two nucleic acids  
CC ; (4) identifying (M3) an individual at risk of developing a disorder  
CC upon administration of an ACE inhibitor and/or vasopressin inhibitor  
CC using the polymorphic data; (5) a library of nucleic acids, each of which  
CC comprises one or more polymorphic positions within a gene encoding a  
CC human protein selected from the group above; and (6) genotyping (M4) an  
CC individual comprising obtaining a nucleic acid sample, determining the  
CC nucleotide present in at least one polymorphic position, and comparing at  
CC least one position with a known data set. The genes, (M1, M2, M3 and M4)  
CC and compositions are useful for detecting, diagnosing, treating,  
CC preventing various disorders such as angioedema and diseases which  
CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's  
CC disease, trachomas, and cardiovascular diseases like angina pectoris,  
CC hypertension, heart failure, myocardial infarction, ventricular  
CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary  
CC artery disease, arteriosclerosis and/or atherosclerosis, and  
CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory  
CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic  
CC obstructive pulmonary disease (COPD) and enterocolitis (many other  
CC diseases and disorders are listed in the specification). The  
CC polynucleotides are also useful for chromosome identification. Antibodies  
CC against the proteins may be utilised for immunophenotyping of cell lines  
CC and biological samples. The present sequence is included in the sequence  
CC listing but is not referred to anywhere else in the specification

XX Disclosure; Page 726; 977bp; English.  
XX  
XX The invention relates to an isolated nucleic acid from a human gene  
CC encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDKRB1),  
CC tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein  
CC 1 (K1K1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme  
CC 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one  
CC polymorphic position. Also included are (1) a probe that hybridises to a  
CC polymorphic position as provided in the detailed summary of single  
CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic  
CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising  
CC obtaining the sample from one or more individuals and determining the  
CC nucleic acid sequence at one or more polymorphic positions in a gene  
CC encoding a protein selected from the group above; (3) constructing (M2)  
CC haplotypes using the genes comprising grouping at least two nucleic acids  
CC ; (4) identifying (M3) an individual at risk of developing a disorder  
CC upon administration of an ACE inhibitor and/or vasopeptidase inhibitor  
CC using the polymorphic data; (5) a library of nucleic acids, each of which  
CC comprises one or more polymorphic positions within a gene encoding a  
CC human protein selected from the group above; and (6) genotyping (M4) an  
CC individual comprising obtaining a nucleic acid sample, determining the  
CC nucleotide present in at least one polymorphic position, and comparing at  
CC least one position with a known data set. The genes, (M1, M2, M3 and M4)  
CC and compositions are useful for detecting, diagnosing, treating,  
CC preventing various disorders such as angioedema and diseases which  
CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's  
CC disease, trachomas, and cardiovascular diseases like angina pectoris,  
CC hypertension, heart failure, myocardial infarction, ventricular  
CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary  
CC artery disease, arteriosclerosis and/or atherosclerosis, and  
CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory  
CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic  
CC obstructive pulmonary disease (COPD) and enterocolitis (many other  
CC diseases and disorders are listed in the specification). The  
CC polynucleotides are also useful for chromosome identification. Antibodies  
CC against the proteins may be utilised for immunophenotyping of cell lines  
CC and biological samples. The present sequence is included in the sequence  
XX listing but is not referred to anywhere else in the specification

 CC The invention relates to an isolated nucleic acid from a human gene  
 CC encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDKRB1),  
 CC tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein  
 CC 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme  
 CC 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one  
 CC polymorphic position. Also included are (1) a probe that hybridises to a  
 CC polymorphic position as provided in the detailed summary of single  
 CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic  
 CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising  
 CC obtaining the sample from one or more individuals and determining the  
 CC nucleic acid sequence at one or more polymorphic positions in a gene  
 CC encoding a protein selected from the group above; (3) constructing (M2)  
 CC haplotypes using the genes comprising grouping at least two nucleic acids  
 CC ; (4) identifying (M3) an individual at risk of developing a disorder  
 CC upon administration of an ACE inhibitor and/or vasopressinase inhibitor  
 CC using the polymorphic data; (5) a library of nucleic acids, each of which  
 CC comprises one or more polymorphic positions within a gene encoding a  
 CC human protein selected from the group above; and (6) genotyping (M4) an  
 CC individual comprising obtaining a nucleic acid sample, determining the  
 CC nucleotide present in at least one polymorphic position, and comparing at  
 CC least one position with a known data set. The genes, (M1, M2, M3 and M4)  
 CC and compositions are useful for detecting, diagnosing, treating,  
 CC preventing various disorders such as angioedema and diseases which  
 CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's  
 CC disease, trachomas, and cardiovascular diseases like angina pectoris,  
 CC hypertension, heart failure, myocardial infarction, ventricular  
 CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary

artery disease, arteriosclerosis and/or atherosclerosis, and  
hyperinsensitivity reactions, sepsis, autoimmune diseases, inflammatory  
arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic  
obstructive pulmonary disease (COPD) and enterocolitis (many other  
diseases and disorders are listed in the specification). The  
polynucleotides are also useful for chromosome identification. Antibodies  
against the proteins may be utilized for immunophenotyping of cell lines  
and biological samples. The present sequence is included in the sequence  
listing but is not referred to anywhere else in the specification

 PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
 PT pathway.  
 XX  
 PS Claim 24; Page 20; 100pp; English.  
 XX  
 CC The invention relates to a method of treating a pathological condition  
 CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
 CC receptor, especially treating, attenuating or preventing pain or  
 CC inflammatory condition. The method comprises administering to a mammal, a  
 CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
 CC which interferes with function or production of NK-1 receptors. The  
 CC method is useful for treating a pathological condition characterised by  
 CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
 CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
 CC psychiatric and central nervous system disorders (e.g. anxiety,  
 CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
 CC peripheral aspects of chronic or acute pain, and for treating,  
 CC attenuating or preventing pain or inflammation such as peripheral,  
 CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
 CC pain relating to psychiatric disorders and central nervous system  
 CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
 CC in a mammal, in particular human. NK-1 receptor related disorders,  
 CC diseases, or pathological conditions treatable by this method include  
 CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
 CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
 CC (allergic dermatitis), intestinal conditions (stroke), chronic  
 CC Crohn's disease), cardiovascular conditions (stroke), chronic  
 CC gastrointestinal tract inflammation, and inflammatory diseases such as  
 CC inflammatory bowel diseases. Other disorders and diseases include  
 CC cardiovascular pathologies including stroke, chronic inflammatory  
 CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
 CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
 CC disorders such as allergies and poison ivy, vasospastic diseases such as  
 CC angina, addiction disorders such as alcoholism, neurodegenerative  
 CC disorders such as acquired immune deficiency syndrome (AIDS) related  
 CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
 CC disorders such as peripheral neuropathy, oedema, stress related and  
 CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
 CC effectively treat chronic conditions and other pathological states  
 CC without the co-administration of substance P, and reduce the number of  
 CC activated receptors while not reducing the number of quiescent NK-1  
 CC receptors. Receptors not chronically stimulated are less affected,  
 CC reducing side effects of treatment. ABK63834-ABK63906 represent NK-1  
 CC receptor coding sequences and oligonucleotides of the invention

PT Treating pathological condition involving neurokinin receptor-1, e.g. pain or inflammation, by administering oligonucleotide or a non-nucleotide disruptor compound which modulate NK-1 receptor biosynthetic pathway.

PS Claim 24; Page 65; 100pp; English.

The invention relates to a method of treating a pathological condition characterised partially by involvement of neurokinin receptor-1 (NK-1) receptor, especially treating, attenuating or preventing pain or inflammatory condition. The method comprises administering to a mammal, compound chosen from an oligonucleotide, its analogue, and a disruptor which interferes with function or production of NK-1 receptors. The method is useful for treating a pathological condition characterised by involvement of NK-1 receptor such as dermatological, immune, autoimmune, cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic, psychiatric and central nervous system disorders (e.g. anxiety, psychosis, schizophrenia), gut inflammation, arthritis, and central or peripheral aspects of chronic or acute pain, and for treating, attenuating or preventing pain or inflammation such as peripheral, chronic, acute pain or inflammation, neuropathic pain, inflammation or pain relating to psychiatric disorders and central nervous system disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia in a mammal, in particular human. NK-1 receptor related disorders, diseases, or pathological conditions treatable by this method include respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic conditions (e.g. conjunctivitis), cutaneous/dermatological conditions (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and Crohn's disease), cardiovascular conditions (stroke), chronic gastrointestinal tract inflammation, and inflammatory diseases such as inflammatory bowel diseases. Other disorders and diseases include cardiovascular pathologies including stroke, chronic inflammatory diseases such as rheumatoid arthritis, demyelinating diseases such as multiple sclerosis, small cell lung cancer, depression, hypersensitivity disorders such as allergies and poison ivy, vasospastic diseases such as angina, addiction disorders such as alcoholism, neurodegenerative disorders such as acquired immune deficiency syndrome (AIDS) related dementia, epilepsy, Alzheimer's disease, and other neuro-pathological disorders such as peripheral neuropathy, oedema, stress related and somatic disorders, and osteoarthritis. Antisense oligonucleotides effectively treat chronic conditions and other pathological states without the co-administration of substance P, and reduce the number of activated receptors while not reducing the number of quiescent NK-1 receptors. Receptors not chronically stimulated are less affected, reducing side effects of treatment. ABR63834-ABK63906 represent NK-1 receptor coding sequences and oligonucleotides of the invention

PT Treating pathological condition involving neurokinin receptor-1, e.g.  
 PT pain or inflammation, by administering oligonucleotide or a non-  
 PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
 PT pathway.

PS Example 18; Page 65; 100pp; English.

The invention relates to a method of treating a pathological condition characterised partially by involvement of neurokinin receptor-1 (NK-1) receptor, especially treating, attenuating or preventing pain or inflammatory condition. The method comprises administering to a mammal, a compound chosen from an oligonucleotide, its analogue, and a disruptor which interferes with function or production of NK-1 receptors. The method is useful for treating a pathological condition characterised by involvement of NK-1 receptor such as dermatological, immune, autoimmune, cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic, psychiatric and central nervous system disorders (e.g. anxiety, psychosis, schizophrenia), gut inflammation, arthritis, and central or peripheral aspects of chronic or acute pain, and for treating, attenuating or preventing pain or inflammation such as peripheral, chronic, acute pain or inflammation, neuropathic pain, inflammation or pain relating to psychiatric disorders and central nervous system disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia in a mammal, in particular human. NK-1 receptor related disorders, diseases, or pathological conditions treatable by this method include respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic conditions (e.g. conjunctivitis), cutaneous/dermatological conditions (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and Crohn's disease), cardiovascular conditions (stroke), chronic gastrointestinal tract inflammation, and inflammatory diseases such as inflammatory bowel diseases. Other disorders and diseases include cardiovascular pathologies including stroke, chronic inflammatory diseases such as rheumatoid arthritis, demyelinating diseases such as multiple sclerosis, small cell lung cancer, depression, hypersensitivity disorders such as allergies and poison ivy, vasospastic diseases such as angina, addiction disorders such as alcoholism, neurodegenerative disorders such as acquired immune deficiency syndrome (AIDS) related dementia, epilepsy, Alzheimer's disease, and other neuro-pathological disorders such as peripheral neuropathy, oedema, stress related and somatic disorders, and osteoarthritis. Antisense oligonucleotides effectively treat chronic conditions and other pathological states without the co-administration of substance P, and reduce the number of activated receptors while not reducing the number of quiescent NK-1 receptors. Receptors not chronically stimulated are less affected, reducing side effects of treatment. ABR63834-ABR63306 represent NK-1 receptor coding sequences and oligonucleotides of the invention

PT	Treating pathological condition involving neurokinin receptor-1, e.g.
PT	pain or inflammation, by administering oligonucleotide or a non-
PT	nucleotide disruptor compound which modulate NK-1 receptor biosynthetic
PT	pathway.
PS	
PS	Claim 24; Page 65; 100pp; English.
XX	
CC	The invention relates to a method of treating a pathological condition
CC	characterised partially by involvement of neurokinin receptor-1 (NK-1)
CC	receptor, especially treating, attenuating or preventing pain or
CC	inflammatory condition. The method comprises administering to a mammal, a
CC	compound chosen from an oligonucleotide, its analogue, and a disruptor
CC	which interferes with function or production of NK-1 receptors. The
CC	method is useful for treating a pathological condition characterised by
CC	involvement of NK-1 receptor such as dermatological, immune, autoimmune,
CC	cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,
CC	psoriasis, central nervous system disorders (e.g. anxiety,
CC	psychosis, schizophrenia), gut inflammation, arthritis, and central or
CC	peripheral aspects of chronic or acute pain, and for treating,
CC	attenuating or preventing pain or inflammation such as peripheral,

CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
CC pain relating to psychiatric disorders and central nervous system  
CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions and inflammatory diseases such as  
CC gastrointestinal tract inflammation, and inflammatory diseases include  
CC inflammatory bowel diseases. Other disorders and diseases include  
CC cardiovascular pathologies including stroke, chronic inflammatory  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
CC disorders such as allergies and poison ivy, vasospastic diseases such as  
CC angina, addiction disorders such as alcoholism, neurodegenerative  
CC disorders such as acquired immune deficiency syndrome (AIDS) related  
CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
CC disorders such as peripheral neuropathy, oedema, stress related and  
CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
CC effectively treat chronic conditions and other pathological states  
CC without the co-administration of substance P, and reduce the number of  
CC activated receptors while not reducing the number of quiescent NK-1  
CC receptors. Receptors not chronically stimulated are less affected.  
CC reducing side effects of treatment. ABK63834-ABK63906 represent NK-1  
CC receptor coding sequences and oligonucleotides of the invention

 CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
 CC which interferes with function or production of NK-1 receptors. The  
 CC method is useful for treating a pathological condition characterised by  
 CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
 CC cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic,  
 CC psychiatric and central nervous system disorders (e.g. anxiety, anxiety,  
 CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
 CC peripheral aspects of chronic or acute pain, and for treating,  
 CC attenuating or preventing pain or inflammation such as peripheral,  
 CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
 CC pain relating to psychiatric disorders and central nervous system  
 CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
 CC in a mammal, in particular human. NK-1 receptor related disorders,  
 CC diseases, or pathological conditions treatable by this method include  
 CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
 CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
 CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
 CC Crohn's disease), cardiovascular conditions (stroke), chronic  
 CC gastrointestinal tract inflammation, and inflammatory diseases such as  
 CC inflammatory bowel diseases. Other disorders and diseases include  
 CC cardiovascular pathologies including stroke, chronic inflammatory  
 CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
 CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
 CC disorders such as allergies and poison ivy, vasospastic diseases such as  
 CC angina, addiction disorders such as alcoholism, neurodegenerative  
 CC disorders such as acquired immune deficiency syndrome (AIDS) related  
 CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
 CC disorders such as peripheral neuropathy, oedema, stress related and  
 CC somatic disorders, and osteoarthritis. Antisense oligonucleotides

effectively treat chronic conditions and other pathological states without the co-administration of substance P, and reduce the number of activated receptors while not reducing the number of quiescent NK-1 receptors. Receptors not chronically stimulated are less affected, reducing side effects of treatment. ABR63834-ABR63906 represent NK-1 receptor coding sequences and oligonucleotides of the invention

Treating pathological condition involving neurokinin receptor-1, e.g. pain or inflammation, by administering oligonucleotide or a non-nucleotide disruptor compound which modulate NK-1 receptor biosynthetic pathway.

Example 18; Page 65; 100pp; English.

The invention relates to a method of treating a pathological condition characterised partially by involvement of neurokinin receptor-1 (NK-1) receptor, especially treating, attenuating or preventing pain or inflammatory condition. The method comprises administering to a mammal, a compound chosen from an oligonucleotide, its analogue, and a disruptor which interferes with function or production of NK-1 receptors. The method is useful for treating a pathological condition characterised by involvement of NK-1 receptor such as dermatological, immune, autoimmune, cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic, psychiatric and central nervous system disorders (e.g. anxiety, psychosis, schizophrenia), gut inflammation, arthritis, and central or peripheral aspects of chronic or acute pain, and for treating,

attenuating or preventing pain or inflammation such as peripheral, chronic, acute pain or inflammation, neuropathic pain, inflammation or pain relating to psychiatric disorders and central nervous system disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia in a mammal, in particular human. NK-1 receptor related disorders, diseases, or pathological conditions treatable by this method include respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic conditions (e.g. conjunctivitis), cutaneous/dermatological conditions (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and Crohn's disease), cardiovascular conditions (stroke), chronic gastrointestinal tract inflammation, and inflammatory diseases such as inflammatory bowel diseases. Other disorders and diseases include cardiovascular pathologies including stroke, chronic inflammatory diseases such as rheumatoid arthritis, demyelinating diseases such as multiple sclerosis, small cell lung cancer, depression, hypersensitivity disorders such as allergies and poison ivy, vasospastic diseases such as angina, addiction disorders such as alcoholism, neurodegenerative disorders such as acquired immune deficiency syndrome (AIDS) related dementia, epilepsy, Alzheimer's disease, and other neuro-pathological disorders such as peripheral neuropathy, oedema, stress related and somatic disorders, and osteoarthritis. Antisense oligonucleotides effectively treat chronic conditions and other pathological states without the co-administration of substance P, and reduce the number of activated receptors while not reducing the number of quiescent NK-1 receptors.  XX  
 XX The invention relates to a method of treating a pathological condition  
 CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
 CC receptor, especially treating, attenuating or preventing pain or  
 CC inflammatory condition. The method comprises administering to a mammal, a  
 CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
 CC which interferes with function or production of NK-1 receptors. The  
 CC method is useful for treating a pathological condition characterised by  
 CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
 CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
 CC psychiatric and central nervous system disorders (e.g. anxiety,  
 CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
 CC peripheral aspects of chronic or acute pain, and for treating,  
 CC attenuating or preventing pain or inflammation such as peripheral,  
 CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
 CC pain relating to psychiatric disorders and central nervous system  
 CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
 CC in a mammal, in particular human. NK-1 receptor related disorders,  
 CC diseases, or pathological conditions treatable by this method include  
 CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
 CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
 CC (allergic dermatitis), intestinal conditions (stroke), chronic  
 CC Crohn's disease), cardiovascular, and inflammatory diseases such as  
 CC gastrointestinal tract inflammation, and inflammatory diseases include

XX CC rat primers rspr2s4, rspr2s4h and rspr7a2 (AAQ30774-6) in first round PCR  
XX CC amplification. Secondary PCR was performed on the amplified product using  
XX CC the same 3 primers prior to a third round of amplification, this time  
XX CC using the primers rspr2s4, rspr2s4h, rspr7a1 (AAQ30777) and rspr7a1h  
XX CC (AAQ30778). The tertiary PCR product was sequenced and was found to have  
XX CC 90% identity at the nucleotide level with the central core region of the  
XX CC rat NK1R from amino acid 91 to 280. Primer rspr7a1h is an antisense  
XX CC primer based on the rat NK1R sequence 864-841 (numbering as in  
XX CC J Biol. Chem. 264: 17649-17652, 1989), but designed to incorporate the

CC human codon bias. (Updated on 25-MAR-2003 to correct PN field.)

 PT New isolated nucleic acid with at least one polymorphic position, useful  
 PT for detecting, diagnosing and treating disorders such as angioedema,  
 PT cancer, viral, bacterial or fungal infection, cardiovascular and  
 PT autoimmune diseases.  
 XX  
 PS Example 3; Page 899; 977pp; English.  
 XX  
 XX The invention relates to an isolated nucleic acid from a human gene  
 CC encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDKRB1),  
 CC tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein  
 CC 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme  
 CC 2 (ACE2) or protease inhibitor 4 (P14), comprising at least one  
 CC polymorphic position. Also included are (1) a probe that hybridises to a  
 CC polymorphic position as provided in the detailed summary of single  
 CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic  
 CC sequence; (2) analysis (MI) at least one nucleic acid sample comprising

CC obtaining the sample from one or more individuals and determining the  
 CC nucleic acid sequence at one or more polymorphic positions in a gene  
 CC encoding a protein selected from the group above; (3) constructing (M2)  
 CC haplotypes using the genes comprising group above; (4) developing a disorder  
 CC ; (4) identifying (M3) an individual at risk of developing a disorder  
 CC upon administration of an ACE inhibitor and/or vasopeptidase inhibitor  
 CC using the polymorphic data; (5) a library of nucleic acids, each of which  
 CC comprises one or more polymorphic positions within a gene encoding a  
 CC human protein selected from the group above; and (6) genotyping (M4) an  
 CC individual comprising obtaining a nucleic acid sample, determining the  
 CC nucleotide present in at least one polymorphic position, and comparing at  
 CC least one position with a known data set. The genes, (M1, M2, M3 and M4)  
 CC and compositions are useful for detecting, diagnosing, treating,  
 CC preventing various disorders such as angioedema and diseases which  
 CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's  
 CC disease, trachomas, and cardiovascular diseases like angina pectoris,  
 CC hypertension, heart failure, myocardial infarction, ventricular  
 CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary  
 CC artery disease, arteriosclerosis and/or atherosclerosis, and  
 CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory  
 CC arthritis, cancer, wounds, viral, bacterial or fungal infection. Chronic  
 CC obstructive pulmonary disease (COPD) and enterocolitis (many other  
 CC diseases and disorders are listed in the specification). The  
 CC polymucleotides are also useful for chromosome identification. Antibodies  
 CC against the proteins may be utilised for immunophenotyping of cell lines  
 CC and biological samples. The present sequence is a genotyping PCR primer  
 CC for the gene encoding one of the proteins listed above

CC	Double-stranded cDNA was prepared from human glioblastoma mRNA and large-	

CC	size cDNA was ligated to EcoRI linkers. linker-ligated cDNA was then
CC	ligated to the calf intestinal phosphatase-treated EcoRI site of the
CC	vector Bluescript SK+. The ligated plasmid DNA was used as template in a
CC	primary PCR amplification with human primers hsp661 and hsp662
CC	(AAQ30789 and AAQ30790) and the vector-specific primer t3 (from
CC	"Stratagene"). The primary PCR product was used as template for secondary
CC	PCR with the human primer hsp663 (AAQ30791) and t3. The product of this
CC	reaction was amplified in a tertiary PCR amplification with hsp664
CC	(AAQ30792) and vector-specific primer SK (also from "Stratagene"). A
CC	400bp DNA fragment was detected which hybridised to human oligoprobe
CC	hsp665 (AAQ30793). This fragment was subcloned and sequenced. It was
CC	found to encode the C-terminal region of human NK1R 6F and also contains
CC	3' UTR. (Updated on 25-MAR-2003 to correct FN field.)

CC	
CC	The core region of human NK1R 6F was isolated by PCR and sequenced (see
CC	AAQ30774-Q30778). The antisense primers hsp635, hsp651, hsp652,
CC	hsp661 and hsp662 (AAQ30784-Q30788) were synthesised based on the human
CC	core sequence. Human glioblastoma mRNA and each of these primers were
CC	used in first strand cDNA synthesis to produce the template for a primary
CC	PCR amplification. Primer hsp635 was used with 2 rat sense primers reprim
CC	and reprimb (AAQ30779 and AAQ30780) for the primary amplification. The PCR
CC	product was then used as template for secondary PCR with the same rat
CC	primers and the human antisense primer hsp634 (AAQ30783). The secondary
CC	PCR product was the template for tertiary PCR amplification. Again using

CC the same rat sense primers but with human antisense primer hsp3a1  
CC (AAQ30782). The amplified DNA fragment hybridised to hsp3a2 (AAQ30781),  
CC indicating it is not a non-specific by-product. The DNA was sequenced and  
CC found to encode the human NK1R sf N-terminal region and also contains a  
CC 5' UTR. (Updated on 25-MAR-2003 to correct PN field.)

XX
XX Novel polymorphisms in the human neurokinin 1 receptor gene used for
XX diagnosis and treatment of NK1R ligand mediated diseases such as asthma.
XX
XX Disclosure; Page 10; 43pp; English.
XX
XX This sequence represents an allele specific primer used to detect the
XX 2361 'T' polymorphism in exon 1 of the human neurokinin 1 receptor gene
XX (see AA292286). The invention relates to single nucleotide polymorphisms
XX (SNPs) in human neurokinin 1 receptor (NK1R). Detection of these
XX polymorphisms is useful for the diagnosis and treatment of NK1R ligand
XX mediated diseases. A method for the diagnosis of one or more SNPs in the
XX NK1R gene in a human, comprises determining the sequence of the nucleic
XX acid at one or more of the polymorphic positions. Diagnostic primers can
XX be used to detect the presence of the polymorphisms. The methods of the
XX invention are used to identify SNPs in the human neurokinin 1 receptor
XX (NK1R) gene. The presence or absence of these polymorphisms can be used
XX in the diagnosis and treatment of NK1R-ligand mediated diseases, such as
XX asthma and depression. A NK1R ligand antagonist drug can also be used to
XX treat pain, migraine, anxiety, depression, urinary incontinence, and
XX inflammatory bowel disease. The methods may also be used for the
XX development of new drug therapies which selectively target one or more
XX allelic variants of the NK1R gene

 CC The invention relates to an isolated nucleic acid from a human gene  
 CC encoding aminopeptidase P (XPNBP2), bradykinin receptor B1 (BDKRB1),  
 CC tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein  
 CC 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme  
 CC 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one  
 CC polymorphic position. Also included are (1) a probe that hybridises to a  
 CC nucleotide polymorphism comprising additional 5' and 3' flanking genomic  
 CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising  
 CC obtaining the sample from one or more individuals and determining the  
 CC nucleic acid sequence at one or more polymorphic positions in a gene  
 CC encoding a protein selected from the group above; (3) constructing (M2)  
 CC haplotypes using the genes comprising grouping at least two nucleic acids  
 CC ; (4) identifying (M3) an individual at risk of developing a disorder  
 CC upon administration of an ACE inhibitor and/or vasopressinase inhibitor  
 CC using the polymorphic data; (5) a library of nucleic acids, each of which  
 CC comprises one or more polymorphic positions within a gene encoding a  
 CC human protein selected from the group above; and (6) genotyping (M4) an  
 CC individual comprising obtaining a nucleic acid sample, determining the  
 CC nucleotide present in at least one polymorphic position, and comparing at  
 CC least one position with a known data set. The genes, (M1, M2, M3 and M4)  
 CC and compositions are useful for detecting, diagnosing, treating,  
 CC preventing various disorders such as angioedema and diseases which  
 CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's  
 CC disease, trachomas, and cardiovascular diseases like angina pectoris,  
 CC hypertension, heart failure, myocardial infarction, ventricular  
 CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary  
 CC artery disease, arteriosclerosis and/or atherosclerosis, and  
 CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory  
 CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic  
 CC obstructive pulmonary disease (COPD) and enterocolitis (many other  
 CC diseases and disorders are listed in the specification). The  
 CC polynucleotides are also useful for chromosome identification. Antibodies  
 CC against the proteins may be utilised for immunophenotyping of cell lines  
 CC and biological samples. The present sequence is a genotyping PCR primer  
 CC for the gene encoding one of the proteins listed above

PT Treating pathological condition involving neurokinin receptor-1, e.g.

PT pain or inflammation, by administering oligonucleotide or a non-  
PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
PT pathway.

CC The invention relates to a method of treating a pathological condition

characterised partially by involvement of neurokinin receptor-1 (NK-1) receptor, especially treating, attenuating or preventing pain or inflammatory condition. The method comprises administering to a mammal, a compound chosen from an oligonucleotide, its analogue, and a disruptor which interferes with function or production of NK-1 receptors. The method is useful for treating a pathological condition characterised by involvement of NK-1 receptor such as dermatological, immune, autoimmune, cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic, psychosomatic and central nervous system disorders (e.g. anxiety, psychosis, schizophrenia), gut inflammation, arthritis, and for treating, attenuating or preventing pain or inflammation such as peripheral, central, acute pain or inflammation, neuropathic pain, inflammation or pain relating to psychiatric disorders and central nervous system disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia in a mammal, in particular human. NK-1 receptor related disorders, diseases, or pathological conditions treatable by this method include respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic conditions (e.g. conjunctivitis), cutaneous/dermatological conditions (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and Crohn's disease), cardiovascular conditions (stroke), chronic gastrointestinal tract inflammation, and inflammatory diseases such as inflammatory bowel diseases. Other disorders and diseases include cardiovascular pathologies including stroke, chronic inflammatory diseases such as rheumatoid arthritis, demyelinating diseases such as multiple sclerosis, small cell lung cancer, depression, hypersensitivity disorders such as allergies and poison ivy, vasospastic diseases such as angina, addiction disorders such as alcoholism, neurodegenerative disorders such as acquired immune deficiency syndrome (AIDS) related dementia, epilepsy, Alzheimer's disease, and other neuro-pathological disorders, such as peripheral neuropathy, oedema, stress related and somatic disorders, and osteoarthritis. Antisense oligonucleotides effectively treat chronic conditions and other pathological states without the co-administration of substance P, and reduce the number of activated receptors while not reducing the number of quiescent NK-1 receptors. Receptors not chronically stimulated are less affected, reducing side effects of treatment. ABK6384-ABK63906 represent NK-1 receptor coding sequences and oligonucleotides of the invention

PT Treating pathological condition involving neurokinin receptor-1, e.g.  
 PT pain or inflammation, by administering oligonucleotide or a non-  
 PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
 PT pathway.

PS Example 18; Page 65; 100pp; English.

CC The invention relates to a method of treating a pathological condition  
CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
CC receptor, especially treating, attenuating or preventing pain or  
CC inflammatory condition. The method comprises administering to a mammal, a  
CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
CC which interferes with function or production of NK-1 receptors. The  
CC method is useful for treating a pathological condition characterised by  
CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
CC cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic,  
CC psychiatric and central nervous system disorders (e.g. anxiety,  
CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
CC peripheral aspects of chronic or acute pain, and for treating,  
CC attenuating or preventing pain or inflammation such as peripheral,  
CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
CC pain relating to psychiatric disorders and central nervous system  
CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions (stroke), chronic  
CC gastrointestinal tract inflammation, and inflammatory diseases such as  
CC inflammatory bowel diseases. Other disorders and diseases include  
CC cardiovascular pathologies including stroke, chronic inflammatory  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
CC disorders such as allergies and poison ivy, vasospastic diseases such as

PT pathway.

PS Example 18; Page 65; 100pp; English.

The invention relates to a method of treating a pathological condition characterised partially by involvement of neurokinin receptor-1 (NK-1) receptor, especially treating, attenuating or preventing pain or inflammatory condition. The method comprises administering to a mammal, a compound chosen from an oligonucleotide, its analogue, and a disruptor which interferes with function or production of NK-1 receptors. The method is useful for treating a pathological condition characterised by involvement of NK-1 receptor such as dermatological, immune, autoimmune, cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic, psychiatric and central nervous system disorders (e.g. anxiety, psychosis, schizophrenia), gut inflammation, arthritis, and central or peripheral aspects of chronic or acute pain, and for treating, attenuating or preventing pain or inflammation such as peripheral, chronic, acute pain or inflammation, neuropathic pain, inflammation or pain relating to psychiatric disorders and central nervous system disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia in a mammal, in particular human. NK-1 receptor related disorders, diseases, or pathological conditions treatable by this method include respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic conditions (e.g. conjunctivitis), cutaneous/dermatological conditions (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and Crohn's disease), cardiovascular conditions (stroke), chronic gastrointestinal tract inflammation, and inflammatory diseases such as inflammatory bowel diseases. Other disorders and diseases include cardiovascular pathologies including stroke, chronic inflammatory diseases such as rheumatoid arthritis, demyelinating diseases such as multiple sclerosis, small cell lung cancer, depression, hypersensitivity disorders such as allergies and poison ivy, vasospastic diseases such as angina, addiction disorders such as alcoholism, neurodegenerative disorders such as acquired immune deficiency syndrome (AIDS) related dementia, epilepsy, Alzheimer's disease, and other neuro-pathological disorders, such as peripheral neuropathy, oedema, stress related and somatic disorders, and osteoarthritis. Antisense oligonucleotides effectively treat chronic conditions and other pathological states without the co-administration of substance P, and reduce the number of activated receptors while not reducing the number of quiescent NK-1 receptors. Receptors not chronically stimulated are less affected, reducing side effects of treatment. ABRK3934-ABK63906 represent NK-1 receptor coding sequences and oligonucleotides of the invention

 PS Example; Page 12; 27pp; English.  
 XX  
 CC The invention relates to a nucleic acid segment from the human neurokinin  
 CC 1 receptor (TACR1) gene of 10-100 nucleotides comprising a fragment  
 CC having a polymorphic site or a complement of the fragment. The TACR1  
 CC segment is useful for analysing a nucleic acid, by obtaining the nucleic  
 CC acid from an individual, and determining the base occupying any one of  
 CC the polymorphic sites in the segment. The nucleic acid is obtained from  
 CC several individuals, and the base occupying one of the polymorphic sites  
 CC is determined in each of the individuals, and further involves testing  
 CC each of the individuals for the presence of a disease phenotype, and  
 CC correlating the presence with the base. The TACR1 segment is useful for  
 CC diagnosing and treating TACR1 ligand mediated diseases, such as asthma.  
 CC The TACR1 segment is also useful in forensics, paternity testing,  
 CC correlating polymorphisms with phenotypic traits, and genetic mapping of  
 CC phenotypic traits. The TACR1 segment is useful in diagnosing and  
 CC monitoring of diseases such as cancer, inflammation, heart disease,  
 CC disorders of central nervous system, and susceptibility to infection to  
 CC microorganisms. The TACR1 segment is also useful in the manufacture of a  
 CC medicament for the treatment of the diseases. This polynucleotide  
 CC sequence represents a PCR primer of the human neurokinin 1 receptor  
 CC (TACR1) gene of the invention

CC The sequences given in AAQ29670-82, AAQ29783 and AAQ29746-48 are primers  
CC which were used in the isolation of fragments of the human neurokinin-1  
CC receptor (NK1R) cDNA. Human NK1R is a membrane receptor for the  
CC neurotransmitter substance P. The primers were designed using regions of  
CC the human NK1R cDNA and also regions of the rat NK1R which were thought  
CC to be similar to human regions. Part of the human cDNA sequence was  
CC derived by amplification using these primers. The remaining part of human  
CC NK1R cDNA was obtained from a human cDNA library utilising portions of  
CC PCR generated fragments as probes. See also AAQ29749. (Updated on 25-MAR-  
CC 2003 to correct PN field.)

PT Treating pathological condition involving neurokinin receptor-1, e.g.  
PT pain or inflammation, by administering oligonucleotide or a non-  
PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
PT pathway.  
XX  
PS Example 18; Page 65; 100pp; English.  
XX  
CC The invention relates to a method of treating a pathological condition  
CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
CC receptor, especially treating, attenuating or preventing pain or  
CC inflammatory condition. The method comprises administering to a mammal, a

CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
CC which interferes with function or production of NK-1 receptors. The  
CC method is useful for treating a pathological condition characterised by  
CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
CC psychiatric and central nervous system disorders (e.g. anxiety,  
CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
CC peripheral aspects of chronic or acute pain, and for treating,  
CC attenuating or preventing pain or inflammation such as peripheral,  
CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
CC pain relating to psychiatric disorders and central nervous system  
CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions (stroke), chronic  
CC gastrointestinal tract inflammation, and inflammatory diseases such as  
CC inflammatory bowel diseases. Other disorders and diseases include  
CC cardiovascular pathologies including stroke, chronic inflammatory  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
CC disorders such as allergies and poison ivy, vasospastic diseases such as  
CC angina, addiction disorders such as alcoholism, neurodegenerative  
CC disorders such as acquired immune deficiency syndrome (AIDS) related  
CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
CC disorders such as peripheral neuropathy, oedema, stress related and  
CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
CC effectively treat chronic conditions and other pathological states  
CC without the co-administration of substance P, and reduce the number of  
CC activated receptors while not reducing the number of quiescent NK-1  
CC receptors. Receptors not chronically stimulated are less affected,  
CC reducing side effects of treatment. ABK63824-ABK63906 represent NK-1

PT Novel modified tachykinin receptors useful for removing or suppressing  
PT substance P in body fluids, and treatment or prophylaxis of a condition  
PT associated with substance P or other tachykinin receptor-binding ligand.

PS Example 1; Page 27; 45pp; English.

XX The invention relates to a mutant tachykinin receptor in which the three  
CC amino acids of the DRV sequence that occurs adjacent to the junction of  
CC the TM3 domain with intracellular loop 2 are replaced with amino acids  
CC whose side chains are neither lipophilic nor contain charged groups.  
CC Mammalian tachykinins include substance P (SP), neurokinin A (NKA) and  
CC neurokinin B (NKB). The mutant receptor of the invention is useful for  
CC treatment or prevention of a condition associated with over-expression or  
CC inappropriate or of an endogenous tachykinin ligand, including protein and  
CC gene therapy. It is useful as a substitute in an assay to identify and/or  
CC evaluate entities that bind to the wild type tachykinin receptor, and in  
CC an assay to determine the concentration of ligand in body fluids in  
CC patients with arthritis, pain, migraine, anxiety, schizophrenia, asthma,  
CC rheumatoid arthritis and in gastrointestinal disorders and diseases of

CC the gastrointestinal tract. Other conditions or disease states that can  
CC be treated, ameliorated or prevented include, attention deficit disorder,  
CC premenstrual syndrome, mania, depression, inflammation, eating disorders,  
CC such as obesity, cognitive disorders, movement disorders, schizophrenic  
CC disorders, sexual dysfunction, stress, Alzheimer's disease, angina,  
CC multiple sclerosis, scleroderma, central nervous system (CNS) disorders  
CC and other conditions where excess tachykinin peptides such as SP are  
CC involved. Tachykinins have an established role in neurotransmission. The  
CC current sequence represents an oligonucleotide designated sense-C, used  
CC in an example from the invention for the preparation of a modified human  
CC NK-1 receptor (NK-1v) by site-directed mutagenesis

Method for introducing genetic material into cells - utilises

polynucleotide function enhancer and nucleic acid free of retroviral

particles, e.g. HIV immunisation.

Example 22; Page 54; 136pp; English.

Two primers (AA067148, AA067149) were used to amplify a DNA segment

encoding the entire envelope region from HTLV-1/TSP and /ATK isolates.

The genetic material can then be introduced into the cells of an

individual by (a) contacting the individual's cells with a polynucleotide

function enhancer (bupivacaine) and (b) administering to the cells the

nucleic acid molecule free of retroviral particles. Nucleic acid

molecules which are delivered to cells may serve as genetic templates for

proteins that function as prophylactic and/or therapeutic immunising

agents; replacement copies of defective, missing or non-functional genes;

CC genetic templates for therapeutic proteins; genetic templates for

CC antisense molecules or as genetic templates for ribozymes. The HTLV env

CC target protein is useful in the immunisation against and treatment of

CC infection by HTLV and T-cell lymphoma. (Updated on 25-MAR-2003 to correct

CC PN field.)

 PT Treating pathological condition involving neurokinin receptor-1, e.g.  
 PT pain or inflammation, by administering oligonucleotide or a non-  
 PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic

PT pathway.  
XX  
XX Example 18; Page 65; 100pp; English.  
XX  
XX The invention relates to a method of treating a pathological condition  
CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
CC receptor, especially treating, attenuating or preventing pain or  
CC inflammatory condition. The method comprises administering to a mammal, a  
CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
CC which interferes with function or production of NK-1 receptors. The  
CC method is useful for treating a pathological condition characterised by  
CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
CC cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic,  
CC psychiatric and central nervous system disorders (e.g. anxiety,  
CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
CC peripheral aspects of chronic or acute pain, and for treating,  
CC attenuating or preventing pain or inflammation such as peripheral,  
CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
CC pain relating to psychiatric disorders and central nervous system  
CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions (stroke), chronic  
CC gastrointestinal tract inflammation, and inflammatory diseases such as  
CC inflammatory bowel diseases. Other disorders and diseases include  
CC cardiovascular pathologies including stroke, chronic inflammatory  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, vasospastic diseases such as

XX  
XX The invention relates to a method of treating a pathological condition  
CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
CC receptor, especially treating, attenuating or preventing pain or  
CC inflammatory condition. The method comprises administering to a mammal, a  
CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
CC which interferes with function or production of NK-1 receptors. The  
CC method is useful for treating a pathological condition characterised by  
CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
CC cardiovascular, vascular disorders (e.g. migraine), allergy, neuropathic,  
CC psychiatric and central nervous system disorders (e.g. anxiety,  
CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
CC peripheral aspects of chronic or acute pain, and for treating,  
CC attenuating or preventing pain or inflammation such as peripheral,  
CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
CC pain relating to psychiatric disorders and central nervous system  
CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions (stroke), chronic  
CC gastrointestinal tract inflammation, and inflammatory diseases such as  
CC inflammatory bowel diseases. Other disorders and diseases include  
CC cardiovascular pathologies including stroke, chronic inflammatory  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, vasospastic diseases such as  
CC disorders such as allergies and poison ivy, vasospastic diseases such as  
CC angina, addiction disorders such as alcoholism, neurodegenerative  
CC disorders such as acquired immune deficiency syndrome (AIDS) related

 XX Inducing differentiation of undifferentiated mammalian cells into  
 PT osteoblasts, for treating e.g. osteoporosis, by contacting the cell with  
 PT an expression or translation inhibitory agent for a polyribonucleotide  
 PT encoding a polypeptide.  
 XX  
 XX Claim 9; SEQ ID NO 52; 88pp; English.  
 PS  
 XX  
 XX The invention relates to a method of inducing differentiation of  
 CC undifferentiated mammalian cells into osteoblasts comprising inhibiting  
 CC the biological activity of a polypeptide, its fragments and/or  
 CC derivatives, comprising contacting the cell with an expression or  
 CC translation inhibitory agent that inhibits the expression or translation  
 CC in the cell of a polyribonucleotide encoding the polypeptide. The  
 CC invention also relates to a method of identifying a compound that induces  
 CC differentiation of undifferentiated mammalian cells into osteoblasts, a  
 CC vector comprising a nucleotide sequence of the invention, in vitro  
 CC production of bone tissue, osteoblast cells obtainable by the method and  
 CC a method of diagnosing a pathological condition involving a systemic or  
 CC local decrease in mean bone density or a susceptibility to the condition  
 CC in a subject. In the method above, the expression inhibitory agent is  
 CC selected from antisense RNA, a nucleic acid expressing the antisense RNA,  
 CC a ribozyme that cleaves the polyribonucleotide, an antisense  
 CC oligodeoxynucleotide, a small interfering RNA (siRNA) that is  
 CC sufficiently homologous to a portion of the polyribonucleotide such that  
 CC the siRNA is capable of inhibiting the polyribonucleotide that would  
 CC otherwise cause the production of the polypeptide, and an antibody  
 CC reactive to the polypeptide. The osteoblast cells are useful for in vitro

CC production of bone tissue. The polynucleotide or the vector is useful as  
 CC a medicament or for manufacturing a medicament for the treatment of a  
 CC disease involving a systemic or local decrease in mean bone density,  
 CC selected from osteoporosis, hypercalcaemia, multiple myeloma,  
 CC hyperparathyroidism and hyperthyroidism. The method is useful for  
 CC inducing differentiation of undifferentiated mammalian cells into  
 CC osteoblasts. This sequence represents a human siRNA molecule of the  
 CC invention.

 PT Inducing differentiation of undifferentiated mammalian cells into  
 PT osteoblasts, comprises contacting undifferentiated cells with inhibitors  
 PT of polypeptides of isolated knock-down constructs and corresponding  
 PT target gene sequences.

XX  
 PS Claim 8; SEQ ID NO 53; 98bp; English.  
 XX  
 XX The invention relates to inducing differentiation of undifferentiated  
 CC mammalian cells into osteoblasts, comprising contacting the  
 CC undifferentiated cells with an inhibitor of any of the 220 polypeptides  
 CC given in the specification (table 4 for overview of isolated knock-down  
 CC constructs and corresponding target gene sequences), their fragments  
 CC and/or derivatives. Also included are identifying a compound that induces  
 CC differentiation of undifferentiated mammalian cells into osteoblasts  
 CC (comprising contacting one or more compounds with a polypeptide listed in  
 CC table 4 of the specification, encoded by any of the genes listed in table  
 CC 4 of the specification, and/or their fragments and/or derivatives,  
 CC determining the binding affinity of the compound to the polypeptide,  
 CC contacting a population of undifferentiated mammalian cells with the  
 CC compound that exhibits a binding affinity of at least 10 micromolar and  
 CC identifying the compound that induces the differentiation of the

CC undifferentiated mammalian cells), identifying a compound or mixture of  
 CC compounds that induces differentiation of undifferentiated mammalian  
 CC cells into osteoblasts, a polynucleotide comprising a sequence of 17-23  
 CC nucleotides homologous to a nucleotide sequence of the target genes  
 CC listed in table 4 of the specification, a vector comprising a  
 CC polynucleotide comprising a sequence of 17-23 nucleotides, in vitro  
 CC production of bone tissue (comprising applying undifferentiated mammalian  
 CC cells on a substrate to form a cellular substrate, introducing a  
 CC polynucleotide comprising a sequence of 17-23 nucleotides or a vector  
 CC comprising the polynucleotide to differentiate the undifferentiated cells  
 CC into osteoblasts, to produce a continuous bone matrix), diagnosing a  
 CC pathological condition involving a systemic or local decrease in mean  
 CC bone density (or a susceptibility to the condition) in a subject (  
 CC comprising determining the level of expression of a polynucleotide  
 CC encoded by any of the target genes (listed in table 4 of the  
 CC specification) in a biological sample and comparing the level of  
 CC expression with the level of expression of the polynucleotides in a  
 CC sample derived from a healthy subject, and diagnosing a pathological  
 CC condition involving a systemic or local decrease in mean bone density (or  
 CC a susceptibility to the condition) comprising determining the amount of  
 CC polypeptide encoded by the genes. The method is useful for inducing  
 CC differentiation of undifferentiated mammalian cells into osteoblasts. The  
 CC vector comprising the polynucleotide is useful in medicaments for the  
 CC treatment of diseases involving a systemic or local decrease in mean bone  
 CC density. The method is useful for in vitro production of bone tissue and  
 CC osteoblast cells, and for diagnosing a pathological condition involving a  
 CC systemic or local decrease in mean bone density or a susceptibility to  
 CC the condition (e.g. osteoporosis, musculoskeletal disease, Paget's  
 CC disease, bone disease, rheumatoid arthritis, periodontal disease,  
 CC Crohn's syndrome, rickets, opsismodysplasia, pycnodysostosis, Toulouse-  
 CC Lautrec syndrome and osteogenesis). The present sequence is an siRNA  
 CC (short interfering RNA) that targets the mRNA of a gene listed in table 4  
 CC or 5 of the specification (genes which, when their expression is reduced,  
 CC promote differentiation into osteoblasts). NOTE: The present sequence is  
 CC described as an siRNA but appears as a DNA sequence.

 PT respiratory, or neurological, comprises contacting a test compound with a  
 PT tachykinin receptor 1.  
 XX  
 XX Example 2; SEQ ID NO 4; 118bp; English.  
 PS  
 XX The invention relates to a method of screening for therapeutic agents  
 CC useful for treating a disease, comprising contacting a test compound with  
 CC a tachykinin receptor 1 (TACRI), polypeptide or polynucleotide, detecting  
 CC binding of the polypeptide or polynucleotide, determining the activity of  
 CC TACRI at a certain concentration of the test compound, in the absence of  
 CC the compound or in the presence of a known regulator of the TACRI  
 CC polypeptide. The invention also relates to a method of diagnosing a  
 CC disease in a mammal comprising determining the amount of a TACRI  
 CC polynucleotide in a sample taken from the mammal and/or diseased mammals, a  
 CC amount of TACRI polynucleotide in healthy and/or diseased mammals, a  
 CC pharmaceutical composition for treating diseases in a mammal comprising a  
 CC TACRI polynucleotide or polypeptide or a therapeutic agent which binds to  
 CC or regulates the activity of a TACRI polypeptide, and preparing a  
 CC pharmaceutical composition useful for treating diseases in a mammal. The  
 CC disease is chosen from cardiovascular diseases, infections, cancer, inflammation,  
 CC dermatological diseases, gastrointestinal diseases, cancer, inflammation,  
 CC metabolic disorders, hematological diseases, respiratory diseases,  
 CC musculoskeletal diseases, neurological diseases, gynecological disorders  
 CC and genitourinary diseases. This sequence represents a PCR primer used in  
 CC expression profiling of the human TACRI cDNA of the invention.

 PT polymorphism in a genetic locus comprising the dopamine receptor D2  
 PT (DRD2) gene.  
 PT  
 XX Claim 31; SEQ ID NO 1320; 634bp; English.  
 PS  
 XX The invention relates to a method of identifying a genetic profile  
 CC associated with a neurological, psychiatric or psychological condition,  
 CC phenotype or state including a sub-threshold neurological, psychiatric or  
 CC psychological condition, phenotype or state in an individual, comprising  
 CC screening individuals for a polymorphism in a genetic locus comprising  
 CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a  
 CC genetic mutation providing a genetic marker for a neurological,  
 CC psychiatric, or psychological condition, state or phenotype in an  
 CC individual, where the presence of a 957C polymorphism is indicative of a  
 CC predisposition to developing a neurological, psychiatric or psychological  
 CC condition, phenotype or state. The compositions and methods are useful  
 CC for identifying a genetic profile associated with a neurological,  
 CC psychiatric or psychological condition. The method enables clinicians to  
 CC make a genetic-based diagnosis of a neurological, psychiatric or  
 CC psychological condition and can thereby implement treatment or  
 CC preventative or symptom-ameliorating protocols to reduce the adverse  
 CC consequences of the condition. This sequence represents a human dopamine  
 CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the  
 CC invention.

PS Claim 2; Fig 2A; 17pp; English.  
XX  
CC Consensus sequences are identified from nine rat gene receptors. The  
CC receptors are for somatostatin, substance K, substance P, neuromedin K,  
CC thyrotropin, HH/CG and others designated mas, mrg and rta. Four regions  
CC of nucleotide sequence are found to exhibit a degree of conservation  
CC significant enough to design degenerate oligo primers for PCR (see  
CC AAQ55045-49). Five oligos are designed with 4- to 64-fold direct  
CC degeneracy plus 5'-23% inosines. The oligos are designed to anneal  
CC sequences in G protein-linked peptide receptor genes. They are used as  
CC six different primer pairs for PCR using rat genomic DNA as template. All  
CC six reactions produce DNA fragments of the expected size. Nucleotide  
CC sequences of two of these fragments are given in AAQ55054 and AAQ55055.

 PT patients.

XX Example 1; Page 8; 36pp; English.

XX Double-stranded cDNA was prepared from human glioblastoma mRNA and large-  
 CC size cDNA was ligated to EcoRI linkers. Linker-ligated cDNA was then  
 CC ligated to the calf intestinal phosphatase-treated EcoRI site of the  
 CC vector Bluescript SK+. The ligated plasmid DNA was used as template in a  
 CC primary PCR amplification with human primers hsp651 and hsp652

CC (AAQ30789 and AAQ30790) and the vector-specific primer t3 (from  
 CC "Stratagene"). The primary PCR product was used as template for secondary  
 CC PCR with the human primer hsp653 (AAQ30791) and t3. The product of this  
 CC reaction was amplified in a tertiary PCR amplification with hsp654  
 CC (AAQ30792) and vector-specific primer SK (also from "Stratagene"). A  
 CC 400bp DNA fragment was detected which hybridised to human oligoprobe  
 CC hsp655 (AAQ30793). This fragment was subcloned and sequenced. It was  
 CC found to encode the C-terminal region of human NKIR sf and also contains  
 CC 3'UTR. (Updated on 25-MAR-2003 to correct PN field.)

PT Treatment of airway diseases such as asthma - by topically applying  
PT adenosine-free antisense oligonucleotide to airway epithelium of  
PT subject.  
XX  
PS Example 5; Page 40; 71pp; English.  
XX  
CC A method for treating airway disease in a subject has been produced,  
CC which involves the topical administration of an essentially adenosine  
CC free antisense oligonucleotide (ON) to the airway epithelium of the  
CC subject. The present sequence is an antisense oligonucleotide specific  
CC for the substance P receptor. The method can be used to treat airway  
CC diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary  
CC disease, bronchitis and other airway diseases characterised by an  
CC inflammatory response. By eliminating adenosine from the antisense ON,  
CC the liberation upon antisense degradation is prevented, thereby  
CC preventing adenosine-induced bronchoconstriction in patients with hyper-  
CC reactive airways

PT New antisense oligonucleotides used in treatment of, e.g. pulmonary  
PT vasoconstriction.  
XX  
PS Disclosure; Page 59; 120pp; English.  
XX  
CC The specification describes antisense oligonucleotides (AA52869-X55271)  
CC directed against at least 2 mRNAs selected from target genes, coding and  
CC non-coding regions of RNAs corresponding to target genes, gene initiation  
CC codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-  
CC end and the juxta-section between coding and non-coding regions and all  
CC segments of RNAs encoding proteins associated with one or more diseases,  
CC conditions or mixtures. The antisense oligonucleotides may be derived  
CC from sequences AA55272-74. These multiple target oligonucleotides  
CC (specifically AA55180-271) can be used for the antisense treatment of  
CC diseases and conditions. Typical diseases and conditions are those  
CC associated with impaired respiration and inflammation, including lung  
CC diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,  
CC acute asthma, allergies, asthma, impeded respiration, respiratory  
CC distress syndrome, pain, cystic fibrosis, pulmonary hypertension,  
CC pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary  
CC disease (COPD), and cancers such as leukemia, lymphomas, carcinomas e.g.  
CC colon cancer, breast cancer, lung cancer, pancreatic cancer,  
CC hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as  
CC well as all types of cancers which may metastasize or have metastasized  
CC to the lungs, including breast and prostate cancer

 XX New antisense oligonucleotides useful for treating e.g. pulmonary  
 XX PT vasoconstriction, inflammation, allergies, asthma, hypertension,  
 XX PT bronchitis, emphysema, respiratory distress syndrome, ischemia or  
 XX PT cancers.  
 XX PS  
 XX Claim 18; Page 436; 1343pp; English.  
 XX  
 XX The present invention describes a new composition comprising an antisense  
 XX CC oligonucleotide (ON) with low adenosine (up to 15%), which targets  
 XX CC nucleic acids involved in bronchoconstriction, allergies, and/or  
 XX CC inflammation. The ON can have antiinflammatory, antiallergic,  
 XX CC antiasthmatic, cyostatic and analgesic activities. The compositions are  
 XX CC useful for the treatment of diseases associated with inflammation  
 XX CC impaired airways, including lung disease and diseases whose secondary  
 XX CC effects afflict the lungs of a subject. They can be used for treating  
 XX CC e.g. ischemic conditions, pulmonary vasoconstriction, allergies, asthma,  
 XX CC e.g. ischemic conditions, respiratory distress syndrome, pain, cystic  
 XX CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
 XX CC pulmonary disease (COPD), and cancers such as leukemias, lymphomas,  
 XX CC carcinomas, and cancers which may metastasize to the lungs, including  
 XX CC breast and prostate cancer. The reduction of the adenine content of the  
 XX CC ONs reduces side effects. The A-containing ONs break down with the  
 XX CC release of deoxyadenosine which activates adenosine receptors causing the  
 XX CC bronchoconstriction and inflammation. AAA32313 to AAA5312 represent the  
 XX CC nucleotide sequences given in the sequence listing from the present  
 XX CC invention, which correspond to SEQ ID NO:1 to 185, and then the last 185  
 XX CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ  
 XX CC from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to  
 XX CC AAA33992) are specifically claimed ONs from the present invention. N.B.  
 XX CC Sequences given in the disclosure of the present invention do not match  
 XX CC up with their corresponding SEQ ID NO: sequences given in the sequence  
 XX CC listing

 PT Treating pathological condition involving neurokinin receptor-1, e.g.  
 PT pain or inflammation, by administering oligonucleotide or a non-  
 PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
 PT pathway.  
 XX  
 PS Example 18; Page 66; 100pp; English.  
 XX  
 CC The invention relates to a method of treating a pathological condition  
 CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
 CC receptor, especially treating, attenuating or preventing pain or  
 CC inflammatory condition. The method comprises administering to a mammal, a  
 CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
 CC which interferes with function or production of NK-1 receptors. The  
 CC method is useful for treating a pathological condition characterised by  
 CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
 CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
 CC psychiatric and central nervous system disorders (e.g. anxiety,  
 CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
 CC peripheral aspects of chronic or acute pain, and for treating,  
 CC attenuating or preventing pain or inflammation such as peripheral,  
 CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
 CC pain relating to psychiatric disorders and central nervous system  
 CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
 CC in a mammal, in particular human. NK-1 receptor related disorders,  
 CC diseases, or pathological conditions treatable by this method include  
 CC respiratory conditions (e.g. asthma, allergic rhinitis), ocular  
 CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
 CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
 CC Crohn's disease), cardiovascular conditions (stroke), chronic  
 CC gastrointestinal tract inflammation, and inflammatory diseases such as  
 CC inflammatory bowel diseases. Other disorders and diseases include  
 CC cardiovascular pathologies including stroke, chronic inflammatory  
 CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
 CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
 CC disorders such as allergies and poison ivy, vasospastic diseases such as  
 CC angina, addiction disorders such as alcoholism, neurodegenerative  
 CC disorders such as acquired immune deficiency syndrome (AIDS) related  
 CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
 CC disorders such as peripheral neuropathy, oedema, stress related and  
 CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
 CC effectively treat chronic conditions and other pathological states  
 CC without the co-administration of substance P, and reduce the number of  
 CC activated receptors while not reducing the number of quiescent NK-1

CC receptors. Receptors not chronically stimulated are less affected.  
 CC reducing side effects of treatment. ABK63867-ABK63906 represent NK-1  
 CC receptor coding sequences and oligonucleotides of the invention

XX Novel nucleic acid segment from human neurokinin 1 receptor, including  
PT polymorphic sites for diagnosing and treating asthma, and in forensics,  
PT paternity testing, and genetic mapping of the trates.  
XX  
PS Example; Page 12; 27pp; English.

The invention relates to a nucleic acid segment from the human neurokinin 1 receptor (TACR1) gene of 10-100 nucleotides comprising a fragment having a polymorphic site or a complement of the fragment. The TACR1 segment is useful for analysing a nucleic acid, by obtaining any one of acid from an individual, and determining the base occupying any one of the polymorphic sites in the segment. The nucleic acid is obtained from several individuals, and the base occupying one of the polymorphic sites is determined in each of the individuals, and further involves testing each of the individuals for the presence of a disease phenotype, and correlating the presence with the base. The TACR1 segment is useful for diagnosing and treating TACR1 ligand mediated diseases, such as asthma. The TACR1 segment is also useful in forensics, paternity testing, correlating polymorphisms with phenotypic traits, and genetic mapping of phenotypic traits. The TACR1 segment is useful in diagnosing and monitoring of diseases such as cancer, inflammation, heart disease, diseases of central nervous system, and susceptibility to infection to microorganisms. The TACR1 segment is also useful in the manufacture of a medicament for the treatment of the diseases. This polynucleotide (TACR1) gene of the invention

XX Pharmaceutical composition for treating ailments associated with impaired  
PT respiration, has oligo(s) antisense to specific gene(s) or its  
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or  
PT ubiquinone.  
XX  
PS Disclosure; SEQ ID NO 10741; 872pp; English.

XX The invention relates to a novel pharmaceutical composition, which has a  
CC first active agent comprising an oligonucleotide antisense to the  
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,  
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of  
CC junctions of genes encoding a polypeptide associated with lung and/or  
CC nasal airway dysfunction and a second active agent comprising an  
CC antiinflammatory steroid and ubiquinone. A composition of the invention  
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,  
CC immunosuppressive, and cytostatic activity. The composition may have a  
CC use in antisense gene therapy. The composition is useful for treating or  
CC preventing a respiratory, lung or malignant disease or condition, also  
CC for enhancing the prophylactic or therapeutic respiratory effect of an  
CC antiinflammatory steroid in a subject, for reducing or depleting levels  
CC of, or reducing sensitivity to, adenosine, reducing levels of adenosine  
CC receptor, producing bronchodilation, increasing levels of ubiquinone or  
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,  
CC lung inflammation, lung allergies, or a respiratory disease or condition.  
CC Note: The sequence data for this patent is not represented in the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pat\_sequences

PT Pharmaceutical composition for treating asthma, has antisense  
PT oligonucleotide containing less percentage of adenosine, targeted to  
PT nucleic acids associated with lung airway or lung dysfunction, and  
PT bronchodilating agent.

XX Claim 15; SEQ ID NO 10741; 763pp; English.

XX This invention describes a novel composition (a) a first active agent,  
CC comprising oligonucleotides, effective for alleviating  
CC bronchoconstriction, respiratory tract inflammation, allergies and  
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,  
CC surfactant depletion or hyposecretion, when administered to a mammal. The  
CC oligonucleotides are derived from a gene encoding or regulating  
CC expression of a target polypeptide associated with lung airway or lung  
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
CC The invention also describes a kit, that comprises: (a) a delivery  
CC device, in separate containers, (b) the oligonucleotides, (c)  
CC instructions for adding a carrier and for use of the kit. The composition  
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,  
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a  
CC beta-adrenergic agonist. The composition is useful for preventing or  
CC treating a respiratory, lung or malignant disease. The administered  
CC composition comprises oligo and is administered to reduce the production  
CC or availability, or to increase the degradation of the target mRNA or to  
CC reduce the amount of target polypeptide present in the lungs. The  
CC pulmonary obstruction, allergies and/or bronchoconstriction and/or lung  
CC inflammation, allergies and/or surfactant hypoproduction are associated  
CC with a disease or condition such as pulmonary vasoconstriction,  
CC inflammation, allergies, asthma, impeded respiration, respiratory  
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
CC hyperplasia, emphysema, chronic obstructive pulmonary disease, pulmonary  
CC transplantation rejection, pulmonary infections, bronchitis or cancer.  
CC The reduced adenosine content of the anti-sense oligos corresponding to  
CC thymidines present in the target RNA serves to prevent the breakdown of  
CC the oligonucleotides into products that free adenosine into the system  
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
CC prevent any unwanted effects due to it

PT Identifying genetic profile associated with a neurological, psychiatric,  
 PT or psychological condition, comprises screening individuals for a  
 PT polymorphism in a genetic locus comprising the dopamine receptor D2  
 PT (DRD2) gene.  
 XX  
 XX Claim 31; SEQ ID NO 1319; 634bp; English.  
 PS  
 CC The invention relates to a method of identifying a genetic profile  
 CC associated with a neurological, psychiatric or psychological condition,  
 CC phenotype or state including a sub-threshold neurological, psychiatric or  
 CC psychological condition, phenotype or state in an individual, comprising  
 CC screening individuals for a polymorphism in a genetic locus comprising  
 CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a  
 CC genetic mutation providing a genetic marker for a neurological,  
 CC psychiatric, or psychological condition, state or phenotype in an  
 CC individual, where the presence of a 957c polymorphism is indicative of a  
 CC predisposition to developing a neurological, psychiatric or psychological  
 CC condition, phenotype or state. The compositions and methods are useful  
 CC for identifying a genetic profile associated with a neurological,  
 CC psychiatric or psychological condition. The method enables clinicians to  
 CC make a genetic-based diagnosis of a neurological, psychiatric or  
 CC psychological condition and can thereby implement treatment or  
 CC preventative or symptom-ameliorating protocols to reduce the adverse  
 CC consequences of the condition. This sequence represents a human dopamine  
 CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the  
 CC invention.

PT for detecting, diagnosing and treating disorders such as angioedema,  
PT cancer, viral, bacterial or fungal infection, cardiovascular and  
PT autoimmune diseases.  
XX  
XX Example 3; Page 931; 977pp; English.  
XX  
XX The invention relates to an isolated nucleic acid from a human gene  
CC encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDRB1),  
CC tachykinin receptor B1 (TRCR1), C1 esterase inhibitor (C1NH), kallikrein  
CC 1 (KLK1), bradykinin receptor B2 (BDRB2), angiotensin converting enzyme  
CC 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one  
CC polymorphic position. Also included are (1) a probe that hybridises to a  
CC polymorphic position as provided in the detailed summary of single  
CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic  
CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising  
CC obtaining the sample from one or more individuals and determining the  
CC nucleic acid sequence at one or more polymorphic positions in a gene  
CC encoding a protein selected from the group above; (3) constructing (M2)  
CC haplotypes using the genes comprising grouping at least two nucleic acids  
CC ; (4) identifying (M3) an individual at risk of developing a disorder  
CC upon administration of an ACE inhibitor and/or vasopeptidase inhibitor  
CC using the polymorphic data; (5) a library of nucleic acids, each of which  
CC comprises one or more polymorphic positions within a gene encoding a  
CC human protein selected from the group above; and (6) genotyping (M4) an  
CC individual comprising obtaining a nucleic acid sample, determining the  
CC nucleotide present in at least one polymorphic position, and comparing at  
CC least one position with a known data set. The genes, (M1, M2, M3 and M4)  
CC and compositions are useful for detecting, diagnosing, treating,  
CC preventing various disorders such as angioedema and diseases which  
CC involve angiotensin like haemangiomatosis, tumours, sarcomas, Crohn's  
CC disease, trachomas, and cardiovascular diseases like angina pectoris,  
CC hypertension, heart failure, myocardial infarction, ventricular  
CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary  
CC artery disease, arteriosclerosis and/or atherosclerosis, and  
CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory  
CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic  
CC obstructive pulmonary disease (COPD) and enterocolitis (many other  
CC diseases and disorders are listed in the specification). The  
CC polynucleotides are also useful for chromosome identification. Antibodies  
CC against the proteins may be utilised for immunophenotyping of cell lines  
CC and biological samples. The present sequence is a genotyping PCR primer  
CC for the gene encoding one of the proteins listed above, using the method  
CC of automated genetic bit analysis, GBA

XX Identifying an agent that modulates Chem23 polypeptide using TIG2 gene,  
PT useful for the preparation of a medicament for the treatment of  
PT disorders, such as cancer, inflammatory and autoimmune diseases,  
XX osteoporosis and psoriasis.  
XX  
PS Example 10; Page 60; 99pp; English.  
XX  
XX The invention relates to a novel method for identifying an agent that  
CC modulates the function of an orphan G-protein coupled receptor, Chem23.  
CC The identification comprises contacting a Chem23 polypeptide with a  
CC tazarotene-induced gene 2 (TIG2) polypeptide in the presence and absence  
CC of a candidate modulator to permit the binding of the TIG2 polypeptide to  
CC the Chem23 polypeptide, and measuring the binding of the Chem23 to the  
CC TIG2 polypeptide, where a decrease in the presence of the candidate  
CC modulator, identifies the modulator as an agent that modulates the  
CC function of Chem23. The agent or composition is useful for the  
CC preparation of a medicament for the treatment of a Chem23- or TIG2-  
CC related disease or disorder, such as cancer, tumour metastasis,  
CC inflammatory disease, autoimmune disease, inherited or acquired immune  
CC deficiencies, osteoporosis, bone healing, bone tissue grafts, graft  
CC rejection, psoriasis, eczema, inflammatory infection, trophic diseases of  
CC skin, viral, bacterial and parasitic infections, female infertility and  
CC ovarian and uterine tumours. The truncated or full-length TIG2  
CC polypeptide is useful for the production of a composition of an isolated  
CC Chem23 or TIG2 polypeptide, and/or for the production of a kit for  
CC screening agents that modulate the signalling of Chem23, and/or ligand  
CC for Chem23. This sequence represents a PCR primer used in the  
CC exemplification of the invention

 PT e.g. neoplasms, hypergammaglobulinemia, paraproteinemia, purpura,  
 PT sarcoidosis, Sezary Syndrome, Waldenström's Macroglobulinemia, Gaucher's  
 PT disease, or histiocytosis.  
 XX  
 XX Example 6; SEQ ID NO 38; 183bp; English.  
 PS The invention describes a polypeptide (I) of up to 50 amino acids where  
 XX the polypeptide binds specifically to a chemerin polypeptide. Also  
 CC described are: a nucleic acid sequence encoding (I); an expression vector  
 CC comprising the coding sequence of the nucleic acid; a transgenic animal  
 CC transfected with the expression vector; a (therapeutic) composition  
 CC comprising (I) and an isolated Chemerin polypeptide or a nucleic acid  
 CC sequence of (I); an antibody that selectively binds to (I); identifying  
 CC an agent that modulates the interaction between a Chemerin polypeptide and  
 CC a Chemerin polypeptide; detecting the presence, in a sample, of an  
 CC agent that modulates the interaction between a Chemerin polypeptide and a  
 CC Chemerin polypeptide; identifying an agent that modulates  
 CC the function of Chemerin polypeptide; detecting the presence, in a  
 CC sample, of an agent that modulates the function of Chemerin polypeptide;  
 CC diagnosing a disease or disorder characterized by dysregulation of  
 CC Chemerin (polypeptide) signaling; a kit, for screening agents that  
 CC modulate the signaling activity of Chemerin polypeptide or for  
 CC diagnosing a disease or disorder characterized by dysregulation of  
 CC Chemerin polypeptide signaling, comprising an isolated Chemerin  
 CC Chemerin polypeptide, (I), an isolated polynucleotide encoding (I), a cell  
 CC transfected with a polynucleotide encoding (I), and its packaging  
 CC materials; a non-human mammal transgenic for a Chemerin polynucleotide  
 CC encoding (I); identifying an antibody inhibiting Chemerin activation;  
 CC and an in vitro method of inhibiting cell proliferation. The  
 CC (therapeutic) composition or expression vector is useful for preparing a  
 CC medicament for ex vivo gene therapy or for in vivo gene therapy or a  
 CC medicament for inhibiting cell proliferation, where the medicament is  
 CC used for treating a disease, e.g. neoplasms, hypergammaglobulinemia,  
 CC lymphoproliferative diseases, disorders, and/or conditions,  
 CC paraproteinemia, purpura, sarcoidosis, Sezary Syndrome, Waldenström's  
 CC Macroglobulinemia, Gaucher's disease, histiocytosis, and any other  
 CC hyperproliferative disease. The polypeptides and polynucleotides and  
 CC methods are useful for diagnosing and treating the cited diseases. This  
 CC sequence represents a reverse transcriptase PCR primer used in an  
 CC analysis of human chemerin receptor (chemerin) expression by quantitative  
 CC RT-PCR.

 PT Quantitating messenger RNA in sample - using immobilised-polynucleotide  
 PT having sequence complementary to sequence unique to the mRNA.  
 XX  
 XX Claim 12 and 40; Page 56; 177bp; English.  
 XX  
 XX This sequence is a probe which was used in the quantification of human  
 CC substance P receptor mRNA from substance P receptor cDNA-transferred  
 CC cells. This probe was used in the method of the invention, for the  
 CC detection and quantification of mRNA in a sample without the need to  
 CC purify the mRNA from cells. The claimed method comprises identifying a  
 CC polynucleotide sequence unique to the mRNA, and immobilising an oligomer  
 CC complementary to this sequence to an insoluble support. The sample is  
 CC then incubated with the bound oligomer and be immobilised. Non-immobilised  
 CC will hybridise to the bound oligomer and be immobilised. Components are  
 CC components are washed from the support and bound RNA is labelled in such  
 CC a way that the label is incorporated onto the support relative to the  
 CC amount of mRNA on the support. The amount of bound label is then  
 CC determined. This method can be used for the reliable, rapid, simultaneous  
 CC quantification and recognition of patho- physiology of various diseases.  
 CC diagnosing and recognition of patho- physiology of various diseases.  
 CC states, eg. hereditary diseases, cancer, and infectious diseases.  
 CC Substance P is a neurotransmitter. Because the nerves expressing  
 CC substance P are involved in pain receptor pathways, the ability to  
 CC measure the mRNA of substance P would be useful in the development of  
 CC analgesics. See also AAQ47381-666. (Updated on 25-MAR-2003 to correct PN  
 CC field.)

New isolated nucleic acid with at least one polymorphic position, useful  
for detecting, diagnosing and treating disorders such as angioedema,  
cancer, viral, bacterial or fungal infection, cardiovascular and  
autoimmune diseases.  
Disclosure; Page 653; 977pp; English.  
The invention relates to an isolated nucleic acid from a human gene  
encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDRB1),  
tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein  
1 (KLK1), bradykinin receptor B2 (BDRB2), angiotensin converting enzyme  
2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one  
polymorphic position. Also included are (1) a probe that hybridises to a  
polymorphic position as provided in the detailed summary of single  
nucleotide polymorphisms comprising additional 5' and 3' flanking genomic  
sequence; (2) analysing (M1) at least one nucleic acid sample comprising  
obtaining the sample from one or more individuals and determining the  
nucleic acid sequence at one or more polymorphic positions in a gene  
encoding a protein selected from the group above; (3) constructing (M2)  
haplotypes using the genes comprising grouping at least two nucleic acids  
(4) identifying (M3) an individual at risk of developing a disorder  
upon administration of an ACE inhibitor and/or vasopressinase inhibitor  
using the polymorphic data; (5) a library of nucleic acids, each of which  
comprises one or more polymorphic positions within a gene encoding a  
human protein selected from the group above; and (6) genotyping (M4) an  
individual comprising obtaining a nucleic acid sample, determining the  
nucleotide present in at least one polymorphic position, and comparing at  
least one position with a known data set. The genes, (M1, M2, M3 and M4)  
and compositions are useful for detecting, diagnosing, treating,  
preventing various disorders such as angioedema and diseases which  
involve angiotensin II like haemangiomas, tumours, sarcomas, Crohn's  
disease, trachomas, and cardiovascular diseases like angina pectoris,  
hypertension, heart failure, myocardial infarction, ventricular  
hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary  
artery disease, arteriosclerosis and/or atherosclerosis, and  
hyperensitivity reactions, sepsis, autoimmune diseases, inflammatory  
arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic  
obstructive pulmonary disease (COPD) and enterocolitis (many other  
diseases and disorders are listed in the specification). The  
polymorphisms are also useful for immunophenotyping of cell lines  
and biological samples. The present sequence represents or contains the

XX Identifying genetic profile associated with a neurological, psychiatric,  
PT or psychological condition, comprises screening individuals for a  
PT polymorphism in a genetic locus comprising the dopamine receptor D2  
PT (DRD2) gene.  
XX  
XX Claim 31; SEQ ID NO 1318; 634pp; English.  
XX  
XX The invention relates to a method of identifying a genetic profile  
XX associated with a neurological, psychiatric or psychological condition,  
XX phenotype or state including a sub-threshold neurological, psychiatric or  
XX psychological condition, phenotype or state in an individual, comprising  
XX screening individuals for a polymorphism in a genetic locus comprising  
XX the dopamine receptor D2 (DRD2) gene. The invention also relates to a  
XX genetic mutation providing a genetic marker for a neurological,  
XX psychiatric, or psychological condition, state or phenotype in an  
XX individual, where the presence of a 957C polymorphism is indicative of a  
XX predisposition to developing a neurological, psychiatric or psychological  
XX condition, phenotype or state. The compositions and methods are useful  
XX for identifying a genetic profile associated with a neurological,  
XX psychiatric or psychological condition. The method enables clinicians to  
XX make a genetic-based diagnosis of a neurological, psychiatric or  
XX psychological condition and can thereby implement treatment or  
XX preventative or symptom-ameliorating protocols to reduce the adverse  
XX consequences of the condition. This sequence represents a human dopamine  
XX receptor D2 (DRD2) DNA oligonucleotide used in the scope of the  
XX invention.

PS	
XX	
XX	Example 21; Page 103; 231pp; English.
CC	This synthetic double-stranded oligonucleotide encodes a lysine-rich
CC	heptad repeat peptide. It can be inserted into the unique BstI site in
CC	the 'base gene' (see AAV99509) of vector PSK5 to provide repetitive
CC	heptad coding sequences. Chimeric genes for lysine-rich synthetic seed
CC	storage proteins suitable for expression in the seeds of plants have been
CC	constructed (see AAV9513-18, AAV9527-32, AAV9539-41). The invention
CC	provides methods for improving the nutritional quality of seeds from
CC	transgenic plants by increasing lysine content

XX Transformed plants that accumulate lysine at higher levels in its seeds  
XX than untransformed plants, has gene fragments encoding lysine-insensitive  
XX dihydrodipicolinic acid synthase and lysine ketoglutarate reductase.  
XX  
XX Example 21; Col 79; 109pp; English.

XX The invention relates to a plant comprising two foreign nucleotide  
XX sequences which cause seeds obtained from the plant to accumulate lysine  
XX at a level of at least 10% higher than seeds of a plant that do not  
XX comprise the nucleotide, where the nucleotide comprises a fragment  
XX encoding a dihydrodipicolinic acid synthase (DHDPs) that is insensitive  
XX to lysine inhibition, and a fragment encoding a plant lysine  
XX ketoglutarate reductase (LKR) or its subfragment. The nucleotide fragment  
XX is operably linked to a plant chloroplast transit sequence (CTS) and the  
XX plant lysine ketoglutarate reductase subfragment is used in antisense  
XX inhibition or cosuppression. Also included are progeny plants from the  
XX above mentioned plant and seeds obtained from the above mentioned plant.  
XX The seeds obtained from the above mentioned plant (e.g., rapeseed,  
XX soybean or corn) comprising the foreign nucleic acid sequences accumulate  
XX lysine at a higher level, preferably at a level of at least 10% higher  
XX than seeds of a plant that do not comprise the foreign nucleic acid  
XX sequences. Chimeric gene comprising DHDPs from *C. glutamicum* and  
XX aspartokinase III (from the *lysC* gene) of *E. coli* (mutated to be lysine-  
XX insensitive) are also used to generate the above transgenic plants. Also  
XX disclosed are synthetic seed storage proteins (SSP) used as an internal  
XX source of lysine, built up from synthetic peptide monomers based around  
XX an *Eari* site sequence (for generating multimeric proteins). The present  
XX sequence is a strand of an oligonucleotide encoding an SSP monomer.

XX New nucleic acid fragment encoding aspartokinase and dihydrodipicolinic

PT acid synthase, useful for increasing threonine or lysine content of seeds  
 PT of plant.  
 XX Example 21; Page 43; 116pp; English.  
 CC The invention relates to an isolated nucleic acid fragment comprising a  
 CC first nucleic acid subfragment encoding aspartokinase (AK) that is  
 CC substantially insensitive to inhibition by lysine, and a second nucleic  
 CC acid subfragment encoding dihydrodipicolinic acid synthase (DHDS) that  
 CC is substantially insensitive to inhibition by lysine. Also included are  
 CC an isolated nucleic acid fragment comprising a nucleic acid subfragment  
 CC encoding lysine ketoglutarate reductase (LKR), a chimeric gene (where  
 CC the nucleic acid fragment is operably linked to a plant chloroplast  
 CC transit sequence and to a seed-specific regulatory sequence, a plant  
 CC comprising the nucleic acid/chimeric gene in its genome, a seed obtained  
 CC from the plant, increasing threonine or lysine content of the seeds of  
 CC a plant, a plant capable of transmitting the chimeric gene to a progeny of  
 CC plant having the ability to produce levels of free threonine or lysine at  
 CC least two times greater than the free threonine levels of untransformed  
 CC plants, a transformed (soybean) plant comprising seeds that accumulate  
 CC lysine at a level at least ten percent to four-fold higher than the seeds  
 CC of an untransformed plant, a transformed rapeseed comprising seeds that  
 CC accumulate lysine to a level between ten percent and one hundred percent  
 CC higher than that of the seeds of an untransformed plant, a monocot plant  
 CC comprising in its genome the nucleic acid fragment having the monocot-  
 CC embryo specific promoter and a transformed corn plant comprising seeds  
 CC that accumulate lysine to a level between ten percent and one hundred  
 CC thirty percent higher than the seeds of the untransformed plant. Also  
 CC disclosed are synthetic lysine-rich seed storage proteins (SSP), built up  
 CC from monomer lysine-rich heptad repeats (encoded by Bari restriction  
 CC enzyme-based oligonucleotides) used as a pool of lysine in a transformed  
 CC plant. The nucleic acid fragments, genes and methods are useful for  
 CC increasing threonine or lysine content of the seeds of the plant. Seeds  
 CC containing increased threonine or lysine content eliminate the need to  
 CC supplement mixed grain feeds with lysine or threonine produced via  
 CC microbial fermentation. The present sequence is one strand of a DNA  
 CC encoding a lysine-rich heptad repeat for use as a monomer unit in a  
 CC synthetic seed storage protein

CC of an untransformed plant, a transformed rapeseed comprising seeds that  
CC accumulate lysine to a level between ten percent and one hundred percent  
CC higher than that of the seeds of an untransformed plant, a monocot plant  
CC comprising in its genome the nucleic acid fragment having the monoco-  
CC embryo specific promoter and a transformed corn plant comprising seeds  
CC that accumulate lysine to a level between ten percent and one hundred  
CC thirty percent higher than the seeds of the untransformed plant. Also  
CC disclosed are synthetic lysine-rich seed storage proteins (SSP), built up  
CC from monomer lysine-rich heptad repeats (encoded by Bari restriction  
CC enzyme-based oligonucleotides) used as a pool of lysine in a transformed  
CC plant. The nucleic acid fragments, genes and methods are useful for  
CC increasing threonine or lysine content of the seeds of the plant. Seeds  
CC containing increased threonine or lysine content eliminate the need to  
CC supplement mixed grain feeds with lysine or threonine produced via  
CC microbial fermentation. The present sequence is one strand of a DNA  
CC encoding a lysine-rich heptad repeat for use as a monomer unit in a  
CC synthetic seed storage protein

XX  
XX  
PS Claim 31; SEQ ID NO 1325; 634pp; English.  
XX  
XX The invention relates to a method of identifying a genetic profile  
CC associated with a neurological, psychiatric or psychological condition,  
CC phenotype or state including a sub-threshold neurological, psychiatric or  
CC psychological condition, phenotype or state in an individual, comprising  
CC screening individuals for a polymorphism in a genetic locus comprising  
CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a  
CC genetic mutation providing a genetic marker for a neurological,  
CC psychiatric, or psychological condition, state or phenotype in an  
CC individual, where the presence of a 957C polymorphism is indicative of a  
CC predisposition to developing a neurological, psychiatric or psychological  
CC condition, phenotype or state. The compositions and methods are useful  
CC for identifying a genetic profile associated with a neurological,  
CC psychiatric or psychological condition. The method enables clinicians to  
CC make a genetic-based diagnosis of a neurological, psychiatric or  
CC psychological condition and can thereby implement treatment or  
CC preventative or symptom-ameliorating protocols to reduce the adverse  
CC consequences of the condition. This sequence represents a human dopamine  
CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the  
CC invention.

PT	Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA		

PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,  
PT rheumatoid arthritis, etc., in a human patient.  
PS Claim 4; Page 150; 218pp; English.  
XX  
CC The present invention describes nucleic acid molecules which modulate the  
CC synthesis, expression and/or stability of a mRNA encoding 1 or more  
CC receptors of vascular endothelial growth factor (VEGF). A patient  
CC (preferably human) having a condition associated with the level of the  
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing  
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour  
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be  
CC treated by administering the nucleic acid molecule or the expression  
CC vector to the patient. AAY57275 to AAY5752 represent specific examples  
CC of nucleic acid molecules from the present invention

XX  
XX The invention relates to the screening of therapeutic agents useful in  
CC the treatment of haematological diseases, cancer, cardiovascular  
CC diseases, inflammatory diseases, gastrointestinal diseases and disorders  
CC of the peripheral and central nervous system in a mammal. The method  
CC comprises contacting a test compound with an ovarian cancer G-protein  
CC coupled receptor 1 (OGR-1) polypeptide or polynucleotide. The method is  
CC useful in screening for therapeutic agents, and also for the treatment of

CC diseases mentioned above. The regulators of an OGR-1 are useful for  
CC regulating OGR-1 activity or for preparing a pharmaceutical composition  
CC for the treatment of the stated diseases in a mammal. The current  
CC sequence represents a probe used in the expression profiling of human OGR  
CC -1 receptor encoding DNA.

XX Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense  
PT constructs, which down regulate expression of a CD20 gene or neurite  
PT growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and  
PT central nervous system injury.  
XX  
XX Claim 30; Page 154; 2000P; English.  
XX  
XX The invention relates to a nucleic acid molecule which down regulates  
XX expression of a CD20 gene and a nucleic acid molecule which down  
XX regulates expression of a neurite growth inhibitor gene (NOGO). The  
XX nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a  
XX DNAzyme) an inozyme (an endolytic nucleic acid cleaving an RNA molecule  
XX possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) or  
XX an amberzyme (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA  
XX with a XGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
XX of CD20 in the presence of a divalent cation that is preferably Mg<sup>2+</sup>.  
XX Furthermore, it may be contacted with a condition associated with the level  
XX of the cell and treat a patient having a condition associated with the level  
XX of CD20. The treatment may further comprise the use of one or more  
XX therapies. In particular, the CD20 targeting nucleic acid may be used to  
XX treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular non-  
XX Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
XX leukemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
XX lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
XX immune thrombocytopaenia, and inflammatory arthropathy. The NOGO-  
XX targeting nucleic acid is used to cleave RNA of the NOGO gene in the  
XX presence of a divalent cation that is preferably Mg<sup>2+</sup>. Furthermore, the  
XX nucleic acid may be contacted with a cell to reduce NOGO activity of the

cell and treat a patient having a condition associated with the level of  
CC NOGO. The treatment may further comprise the use of one or more  
CC therapies. In particular, the NOGO-targeting nucleic acid may be used to  
CC treat central nervous system (CNS) injury and cerebrovascular accident  
CC (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),  
CC chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),  
CC Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob  
CC disease, muscular dystrophy, and/or other neurodegenerative disease  
CC states which respond to the modulation of NOGO expression. The present  
CC sequence is a zinzyme molecule of the invention

(GRON/) GRONDAHL C.

(WAHL/) WAHL P.

Stennicke VM, Norby PL, Grondahl C, Wahl P;

WPI; 2004-060179/06.

Novel transducer of meiosis activating sterols designated SAM1a and SAM1b  
 useful for screening for agonist or antagonist of meiosis activating  
 sterols used to treat infertility or to provide a way of contraception.

Example 2; SEQ ID NO 10; 31pp; English.

The invention relates to a novel isolated transducer of meiosis  
 activating sterols (MAS)-signalling, its peptide fragment or a salt. The  
 isolated MAS-signalling transducer has antiinfertility activity. The MAS-  
 signalling transducer is useful for detecting the presence of a compound  
 or its salt which has affinity for the MAS-signalling transducer. The MAS  
 -signalling transducer is useful for detecting the presence of an  
 antagonist or agonist of the MAS-signalling transducer. The MAS-  
 signalling transducer is useful for detecting the presence of an  
 antagonist of the MAS-signalling transducer. The MAS-signalling  
 transducer is useful for screening for agonist or antagonist activity of  
 4,4-dimethyl-5-alpha-cholesta-8,14,24-triene-3-beta-ol (FF-MAS) or MAS. An  
 expression vector containing the nucleic acid which encodes the MAS-  
 signalling transducer is useful for isolation of tissue and/or organ  
 specific variants of the MAS-signalling transducer. The agonist or  
 antagonist of the MAS-signalling transducer identified using the  
 transducer provides a way to control meiosis in order to treat  
 infertility or to achieve a novel principle of contraception. This  
 polynucleotide sequence represents a primer used in the exemplification  
 of the invention.

XX expression vector containing the nucleic acid which encodes the MAS-  
XX signalling transducer is useful for isolation of tissue and/or organ  
XX specific variants of the MAS-signalling transducer. The agonist or  
XX antagonist of the MAS-signalling transducer identified using the  
XX transducer provides a way to control meiosis in order to treat  
XX infertility or to achieve a novel principle of contraception. This  
XX polynucleotide sequence represents a primer used in the exemplification  
XX of the invention.

XX New oligonucleotide primers amplifying gene regions conserved among  
PT mammals - useful for developing genomic maps, isolating clones and making  
PT cross-species comparisons.  
XX  
XX Claim 1; Page 10; 26pp; English.  
XX  
XX The present sequence represents a specifically claimed oligonucleotide  
XX PCR primer. The oligonucleotide can be used for polymerase chain reaction  
XX (PCR) amplification of DNA, specifically regions of specific genes that  
XX are conserved among mammalian species, i.e. pairs of oligonucleotides  
XX from the present specification represent universal mammalian sequence-  
XX tagged site (UM-STS) primers. The primers are used to develop genomic  
XX maps, to isolate clones from libraries, to make cross-species comparisons  
XX and to develop additional genetic markers. UM-STS allow genomic  
XX comparisons to be made between more species

 PS The present invention relates to the polypeptide haemofiltrate (HP) -  
 CC chondro-osteomodulin (COM) and its natural or pharmacologically tolerable  
 CC derivatives, especially amidated, acetylated, phosphorylated or  
 CC glycosylated derivatives, or with N-terminal pyroglutamate. COM and its  
 CC derivatives are useful for treatment of parathyroid disease (especially  
 CC hypoparathyroidism), degenerative bone disease (especially osteoporosis),  
 CC bone fractures, cartilage and connective tissue diseases, rheumatism and  
 CC arthritis, fatty degeneration and diabetes type II, immune system  
 CC disorders, disorders that can be treated by modifying migration of stem  
 CC cells, kidney diseases associated with disrupted electrolyte excretion  
 CC (especially renal insufficiency), also phosphate/calcium excretion, and  
 CC skin diseases, e.g. psoriasis, eczema and acne, also viral, bacterial and  
 CC parasitic infections, female infertility, ovarian and uterine tumours,  
 CC autoimmune diseases and immune defects. They are also useful for  
 CC diagnosis. The present sequence is a PCR primer used to isolate the  
 CC protein of the invention.

 PT New RNAi agent targeted to a target transcript encoding a protein  
 PT involved in the development, pathogenesis, or symptoms of an IGE-mediated  
 PT disease or condition, useful for treating or preventing, e.g. allergic  
 PT rhinitis or asthma.  
 XX  
 PS Claim 10; SEQ ID NO 256; 133pp; English.  
 XX  
 CC The present invention relates to an RNAi agent targeted to a transcript  
 CC that encodes a protein involved in the development, pathogenesis, or  
 CC symptoms of an IGE-mediated disease or condition. Also claimed are a  
 CC composition comprising an RNAi agent; a method of treating or preventing  
 CC a disease characterized by inappropriate or excessive mast cell activity  
 CC or Th2 helper cell responses, or an IGE-mediated disease or condition  
 CC (e.g. hypersensitivity), or sepsis, shock or a burn-related injury; an  
 CC analog of the siRNA or shRNA; inhibiting expression of a target  
 CC transcript; and identifying an RNAi agent as comprising a sequence  
 CC suitable for treatment of a condition characterized by IGE-mediated  
 CC hypersensitivity or inappropriate or excessive mast cell activity or Th2  
 CC helper cell activity. The transcript encodes a protein selected from  
 CC FcεR1α chain; chain, FcεR1β chain; chain, c-Kit, Lyn, Syk, ICOS,  
 CC CXCR4, CD40, CD80, CD86, RelB, 4-1BB ligand, TLR1, TLR2, TLR3,  
 CC TLR4, TLR5, TLR6, TLR7, TLR9, CD83, SLAM, common gamma chain, and  
 CC COX-2. The RNAi agent is an RNAi vector, siRNA or shRNA. The composition  
 CC and methods are useful for diagnosing, preventing or treating IGE-  
 CC mediated diseases, such as allergic rhinitis, asthma, hypersensitivity,  
 CC sepsis, shock or a burn-related injury. These may also be used in  
 CC screening for agents that may treat or prevent such disease conditions.  
 CC The present sequence is a RNAi sense strand, targeting CD83.

XX
XX New chemically modified double stranded short interfering nucleic acid
PT (siRNA) molecule that directs cleavage of a NOGO receptor (NOGOR) RNA via
PT RNA interference (RNAi), useful for modulating gene expression.
XX
XX Disclosure; SEQ ID NO 14; 171bp; English.
XX
XX The invention relates to chemically synthesized short interfering nucleic
CC acids (siRNAs) which downregulate expression of a NOGO receptor gene by
CC RNA interference. The siRNAs may or may not comprise ribonucleotides, can
CC contain deoxyribonucleotides, can be chemically modified and may be,
CC double or single stranded. They further comprise sense and antisense
CC regions, or alternatively are assembled from a sense oligonucleotide and
CC an antisense oligonucleotide. Specifically, the siRNAs include short
CC interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short
CC hairpin RNA (shRNA). The invention also relates to pharmaceutical
CC compositions comprising a siRNA targeted to a NOGO receptor mRNA. It
CC further discloses siRNAs targeted to a NOGO receptor gene, siRNAs targeted
CC to a NOGO gene itself, and expression vectors and host cells comprising
CC to a siRNA of the invention. In particular, the invention discloses siRNAs
CC (AEF75903-AEF76100 and AEF76101-AEF76112) targeted to the human NOGO
CC receptor gene of GenBank accession number BC011787, and siRNAs (AEF75451-
CC AEF75902) targeted to the human NOGO-A (KIAA0886) gene of DDBJ accession
CC number AB020693. The siRNAs are used to modulate expression of NOGO
CC receptor or NOGO genes in cells, tissue explants or organisms (e.g., by
CC ex vivo gene therapy), or in grafts and transplants for the treatment of
CC a variety of neurodegenerative conditions such as central nervous system
CC (CNS) injury (e.g., spinal cord injury or stroke), multiple sclerosis
CC (MS), muscular dystrophy, chemotherapy-induced neuropathy, amyotrophic
CC lateral sclerosis (ALS), ataxia, Parkinson's disease, Huntington's
CC disease, dementia, Creutzfeldt-Jakob disease and especially Alzheimer's
CC disease. The siRNAs may also be used in drug screening, diagnosis,
CC therapeutic target identification and validation, genetic engineering,
CC pharmacogenomics, studying gene function, and gene mapping (e.g., of
CC single nucleotide polymorphisms). The present sequence represents the
CC sense strand of a human NOGO-A-targeted double-stranded siRNA, which is
CC identical to the NOGO-A transcript target sequence.

XX  
XX New chemically modified double stranded short interfering nucleic acid  
PT (siRNA) molecule that directs cleavage of a NCOG receptor (NOCOR) RNA via  
PT RNA interference (RNAi), useful for modulating gene expression.  
XX  
XX  
PS Disclosure; SEQ ID NO 240; 171bp; English.  
XX  
XX The invention relates to chemically synthesized short interfering nucleic  
CC acids (siRNAs) which downregulate expression of a NCOG receptor gene by  
CC RNA interference. The siRNAs may or may not comprise ribonucleotides, can  
CC contain deoxyribonucleotides, can be chemically modified and may be  
CC double or single stranded. They further comprise sense and antisense  
CC regions, or alternatively are assembled from a sense oligonucleotide and  
CC an antisense oligonucleotide. Specifically, the siRNAs include short  
CC interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short  
CC hairpin RNA (shRNA). The invention also relates to pharmaceutical  
CC compositions comprising an siRNA targeted to a NCOG receptor mRNA. It  
CC further discloses siRNAs targeted to a NCOG receptor gene, siRNAs targeted  
CC to a NCOG gene itself, and expression vectors and host cells comprising  
CC an siRNA of the invention. In particular, the invention discloses siRNAs  
CC (AEF75903-AEF76100 and AEF76101-AEF76112) targeted to the human NCOG  
CC receptor gene of GenBank accession number BC011787, and siRNAs (AEF75451-  
CC AEF75902) targeted to the human NCOG-A (KIAA0866) gene of DDBJ accession  
CC number AB020693. The siRNAs are used to modulate expression of NCOG  
CC receptor or NCOG genes in cells, tissue explants or organisms (e.g., by  
CC ex vivo gene therapy), or in grafts and transplants for the treatment of  
CC a variety of neurodegenerative conditions such as central nervous system  
CC (CNS) injury (e.g., spinal cord injury or stroke), multiple sclerosis  
CC lateral sclerosis (ALS), ataxia, Parkinson's disease, Huntington's  
CC disease, dementia, Creutzfeldt-Jakob disease and especially Alzheimer's  
CC disease. The siRNAs may also be used in drug screening, diagnosis,  
CC therapeutic target identification and validation, genetic engineering,  
CC pharmacogenomics, studying gene function, and gene mapping (e.g., of  
CC single nucleotide polymorphisms). The present sequence represents the  
CC antisense strand of a human NCOG-A-targeted double-stranded siRNA.

XX Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA  
PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,  
PT rheumatoid arthritis, etc., in a human patient.  
XX  
XX Claim 4; Page 129; 218bp; English.  
PS  
XX The present invention describes nucleic acid molecules which modulate the  
CC synthesis, expression and/or stability of a mRNA encoding 1 or more  
CC receptors of vascular endothelial growth factor (VEGF). A patient  
CC (preferably human) having a condition associated with the level of the  
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing  
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour  
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be  
CC treated by administering the nucleic acid molecule or the expression  
CC vector to the patient. AAK7275 to AAK75752 represent specific examples  
CC of nucleic acid molecules from the present invention

PT Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense  
PT constructs, which down regulate expression of a CD20 gene or neurite  
PT growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and  
PT central nervous system injury.  
XX  
XX  
PS Claim 88; Page 98; 200pp; English.  
XX  
CC The invention relates to a nucleic acid molecule which down regulates  
CC expression of a CD20 gene and a nucleic acid molecule which down  
CC regulates expression of a neurite growth inhibitor gene (NOGO). The  
CC nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a  
CC DNazyme) an inozyme (an endolytic nucleic acid cleaving an RNA molecule  
CC possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) or  
CC an amberyze (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA  
CC with a YGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
CC of CD20 in the presence of a divalent cation that is preferably Mg<sup>2+</sup>.  
CC Furthermore, it may be contacted with a cell to reduce CD20 activity of  
CC the cell and treat a patient having a condition associated with the level  
CC of CD20. The treatment may further comprise the use of one or more  
CC therapies. In particular, the CD20 targeting nucleic acid may be used to  
CC treat lymphoma, leukemia, B-cell lymphoma, low-grade or follicular non-  
CC Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
CC leukemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
CC lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
CC immune thrombocytopenia, and inflammatory arthropathy. The NOGO-  
CC targeting nucleic acid is used to cleave RNA of the NOGO gene in the  
CC presence of a divalent cation that is preferably Mg<sup>2+</sup>. Furthermore, the  
CC nucleic acid may be contacted with a cell to reduce NOGO activity of the  
CC cell and treat a patient having a condition associated with the level of  
CC NOGO. The treatment may further comprise the use of one or more  
CC therapies. In particular, the NOGO-targeting nucleic acid may be used to  
CC treat central nervous system (CNS) injury and cerebrovascular accident  
CC (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),  
CC chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),  
CC Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob  
CC disease, muscular dystrophy, and/or other neurodegenerative disease  
CC states which respond to the modulation of NOGO expression. The present  
CC sequence is a zinzyme molecule of the invention

CC The present invention relates to the use of enzymatic nucleic acid  
CC molecules (e.g. ribozymes) to modulate gene expression. The invention  
CC also methods for their use to down regulate or inhibit the expression of

CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1B), methionine  
CC aminopeptidase (MeAP-2), human telomerase (hTERT), protein kinase C  
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor  
CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),  
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic  
CC nucleic acid molecules used to inhibit the expression of the said genes  
CC include hammerhead (HH), hairpin, NCH (inosyme), G-cleaver, amberzyme,  
CC zincyme, and/or DNzyme motifs. The methods of the invention are useful  
CC for treating cancer, in particular breast cancer, Alzheimer's disease,  
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related  
CC diseases, hepatitis B infections, and hepatitis and hepatocellular  
CC carcinoma. The enzymatic nucleic acid molecules can also be used as  
CC diagnostic tools to examine genetic drift and mutations within diseased  
CC cells and to detect the presence of specific RNA in a cell. The present  
CC sequence represents a substrate/target sequence for a ribozyme used in  
CC the examples of the present invention. Note: Some SEQ ID Nos are repeated  
CC more than once in the specification, but these have different sequences  
CC associated with them.

PT Novel 18S ribosome RNA gene derived from common marmoset, or its partial  
PT fragment, useful as internal standard for measuring difference in  
PT expression level of gene of interest in two or more types of test  
PT samples.  
XX  
XX Disclosure; SEQ ID NO 10; 21bp; Japanese.  
PS

XX The invention relates to a novel 18S ribosome RNA gene (I) derived from a  
CC common marmoset, or its partial fragment (AEF82499). Also claimed is a  
CC composition for detecting DNA or RNA, comprising the 18S rRNA gene. The  
CC 18S rRNA gene is useful as an internal standard or a reference of the  
CC expression level of a gene in the test sample during the measurement of  
CC the difference in the expression level of a gene of interest in two or  
CC more types of test sample, based on the difference in the transcription  
CC product amount of the gene, where the test sample is derived from a  
CC common marmoset. The transcription product amount of the gene of interest  
CC is measured using a DNA array or by quantitative reverse transcriptase-  
CC PCR. The present sequence represents an RT-PCR primer (see also AEF82507)  
CC directed at the 18S rRNA gene.

 PS  
 XX The present invention describes a double-stranded short interfering  
 CC nucleic acid (siNA) that downregulates expression of the vascular  
 CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a  
 CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo  
 CC delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors  
 CC that express siNA; and (5) single-stranded siNA with similar properties.  
 CC The siNAs have antiangiogenic, cytostatic, antidiabetic,  
 CC ophthalmological, antiarthritic, antipsoriatic, nephrotropic and  
 CC gynaecological activities. The siNA are useful for modulating  
 CC (downregulating) the expression of VEGFR genes. The siNA are potentially  
 CC useful for treating a wide range of angiogenesis-associated conditions,  
 CC particularly cancers, diabetic retinopathy, macular degeneration,  
 CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiodiroma,  
 CC and polycystic kidney disease. The siNA may also be useful for diagnosis,  
 CC drug screening, target identification and validation, genetic  
 CC engineering, studying gene function, and also for gene mapping (e.g. of  
 CC single-nucleotide polymorphisms). The present sequence is used in the  
 CC exemplification of the present invention.

PT      Selecting siRNA by selecting an siRNA molecule of 19-25 nucleoside bases
PT      by selecting a target gene and measuring the functionality of the
PT      nucleotide sequences that are complementary to a stretch of nucleotides
PT      of the target sequence.
XX
PS      Example 12; SEQ ID NO 2195; 199pp; English.
XX
CC      The invention relates to a novel method for selecting siRNA (short
CC      interfering RNA) comprising selecting an siRNA molecule of 19-25
CC      nucleoside bases by selecting a target gene and measuring the
CC      functionality of sequences of 19-25 nucleotides in length that are
CC      substantially complementary to a stretch of nucleotides of the target
CC      sequence, where the functionality is dependent upon non-target specific
CC      criteria. Also claimed are methods for gene-silencing, developing an
CC      siRNA algorithm for selecting siRNA, selecting an siRNA with improved
CC      functionality, selecting hyperfunctional siRNA, an siRNA molecule
CC      effective at silencing Bcl-2, and a kit for gene silencing comprising the
CC      siRNA. The siRNA molecule comprises a sequence substantially similar to a
CC      sequence consisting of GGGAGAUGAGUAGAUA; GAAGCAUCUUCUCUACAUU;
CC      GUAGCAACACCGGAGUA; AGAUGAGUAGUAGAUAU; UGAAGAUUCUUCUCUACAUU;
CC      CAUCCGCCUCUUGUAUA; UGCGCCUCUCUGUAGUU; GGAUAGUAGUAGUAGUA;
CC      GGAGAUGAGUAGUAGUAG; and GAAGCUCUCUCUAGUU. The siRNA molecule
CC      comprises a sense strand and an anti-sense strand. The siRNA molecule
CC      comprises a hairpin. The siRNA molecule comprises between 18 and 30 base
CC      pairs. The kit comprises at least two siRNA, comprising a first optimised
CC      siRNA and a second optimised siRNA. The method is useful in selecting
CC      siRNA for generating a gene silencing reagent. The present sequence is
CC      used in the exemplification of the invention.

XX DR WPI; 2004-546139/53.  
XX PT New hyperactive mutant of the mariner transposase, useful for targeted  
XX insertion of DNA, particularly for gene therapy, has at least one  
XX phosphorylatable amino residue replaced by non-phosphorylatable residue.  
XX PS Disclosure; SEQ ID NO 3; 62pp; French.  
XX CC The present invention relates to a hyperactive transposase mutant (A)  
XX from a mariner mobile genetic element (BGM). It has at least one mutation  
XX of a phosphorylatable residue (pr), in at least one phosphorylation site,  
XX that renders the site non-phosphorylatable. The BGM is from *Drosophila*  
XX *maritima* and represents the transposon from the Mos-1 element  
XX (AD805764). Unlike the wild-type transposase, (A), when expressed in  
XX eukaryotes, is not subjected to phosphorylation (post-translation  
XX modification), a process that reduces affinity for DNA and limits  
XX conformational activity, resulting in a low capacity for catalysis of  
XX transposition. The non-phosphorylatable mutants are at least 25,  
XX preferably 100, times more active. (A) is useful for in vitro  
XX transposition of transposable DNA of interest into a target DNA,  
XX particularly for use in gene therapy where the transposable DNA is  
XX introduced into a host cell genome. The present sequence was used for  
XX cloning a ribosome binding site for vector construction.

XX  
XX The invention describes a chemically synthesized double stranded short  
CC interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a G

CC protein-coupled receptor for asthma susceptibility (GPR) RNA through RNA  
CC interference (RNAi), where each strand of (I) has 18-23 nucleotides and  
CC one strand of (I) comprises nucleotide sequence having sufficient  
CC complementarity to the GPR RNA to direct cleavage of the GPR RNA by RNA  
CC interference. Also described is a composition comprising (I) and a siRNA  
CC carrier or diluent; validating GPR; a kit comprising (I); and an siRNA  
CC construct. (I) exhibits improved stability, bioavailability and  
CC activation of cellular responses, thus mediating RNA interference. This  
CC sequence represents the target polynucleotide of a G protein-coupled  
CC receptor 154 (GPR154) specific siRNA used to control GPR gene  
CC expression.

PS
XX
XX The invention relates to chemically synthesized short interfering nucleic
XX acids (siRNAs) which downregulate expression of telomerase genes by RNA
XX interference. The siRNAs may or may not comprise ribonucleotides, can
XX contain deoxyribonucleotides, can be chemically modified and may be
XX double or single stranded. They further comprise sense and antisense
XX regions, or alternatively are assembled from a sense oligonucleotide and
XX an antisense oligonucleotide. Specifically, the siRNAs include short
XX interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short
XX hairpin RNA (shRNA). The invention also relates to pharmaceutical
XX compositions comprising an siRNA targeted to the human telomerase mRNA
XX which may have a cytosolic, immunosuppressive, vasotropic or
XX antimicrobial activity. The invention further discloses expression
XX vectors and host cells comprising an siRNA of the invention. The siRNAs are
XX used to modulate expression of the telomerase gene in cells, tissue
XX explants or organisms (for example by ex vivo gene therapy), or in grafts
XX and transplants for the treatment of a variety of conditions. They may be
XX used in the treatment of cancer, restenosis, infectious, and age-related
XX rejection, and/or autoimmune, proliferative, and age-related
XX diseases, disorders or conditions. The siRNAs may also be used in drug
XX screening, diagnosis, therapeutic target identification and validation,
XX genetic engineering, pharmacogenomics, studying gene function, and gene
XX mapping (for example of single nucleotide polymorphisms). The present
XX sequence represents the sense strand of a human telomerase-targeted
XX double-stranded siRNA, which is identical to the telomerase transcript
XX target sequence.

XX (SIRN-) SIRNA THERAPEUTICS INC.  
XX Mcewlggen J, Belgelman L;  
XX WPI; 2005-496858/50.  
XX PT Novel chemically synthesized double-stranded short interfering nucleic  
XX acid molecule directing cleavage of telomerase RNA by RNA interference,  
XX useful for treating cancer and restenosis.  
XX PS Claim 33; SEQ ID NO 439; 304pp; English.  
XX CC The invention relates to chemically synthesized short interfering nucleic  
XX acids (siRNAs) which downregulate expression of telomerase genes by RNA  
XX interference. The siRNAs may or may not comprise ribonucleotides, can  
XX contain deoxyribonucleotides, can be chemically modified and may be  
XX double or single stranded. They further comprise sense and antisense  
XX regions, or alternatively are assembled from a sense oligonucleotide and  
XX an antisense oligonucleotide. Specifically, the siRNAs include short  
XX interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short  
XX hairpin RNA (shRNA). The invention also relates to pharmaceutical  
XX compositions comprising an siRNA targeted to the human telomerase mRNA  
XX which may have a cytoskeletal, immunosuppressive, vasotropic or  
XX antimicrobial activity. The invention further discloses expression

CC vectors and host cells comprising an siRNA of the invention. The siRNAs are  
CC used to modulate expression of the telomerase gene in cells, tissue  
CC explants or organisms (for example by ex vivo gene therapy), or in grafts  
CC and transplants for the treatment of a variety of conditions. They may be  
CC used in the treatment of cancer, restenosis, transplant and/or tissue  
CC rejection, and/or autoimmune, proliferative, infectious, and age-related  
CC diseases, disorders or conditions. The siRNAs may also be used in drug  
CC screening, diagnosis, therapeutic target identification and validation,  
CC genetic engineering, pharmacogenomics, studying gene function, and gene  
CC mapping (for example of single nucleotide polymorphisms). The present  
CC sequence represents the antisense strand of a human telomerase-targeted  
CC double-stranded siRNA.

PS  
XX  
XX The invention relates to chemically synthesized short interfering nucleic  
CC acids (siNAs) which downregulate expression of a NOGO receptor gene by  
CC RNA interference. The siNAs may or may not comprise ribonucleotides, can  
CC contain deoxyribonucleotides, can be chemically modified and may be  
CC double or single stranded. They further comprise sense and antisense  
CC regions, or alternatively are assembled from a sense oligonucleotide and  
CC an antisense oligonucleotide. Specifically, the siNAs include short  
CC interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short  
CC hairpin RNA (shRNA). The invention also relates to pharmaceutical  
CC compositions comprising an siNA targeted to a NOGO receptor mRNA. It  
CC further discloses siNAs targeted to a NOGO receptor gene, siNAs targeted  
CC to a NOGO gene itself, and expression vectors and host cells comprising  
CC an siNA of the invention. In particular, the invention discloses siRNAs  
CC (AEF75903-AEF76100 and AEF76101-AEF76112) targeted to the human NOGO  
CC receptor gene of GenBank accession number BC011787, and siRNAs (AEF75451-  
CC AEF75902) targeted to the human NOGO-A (KIAA0866) gene of DBJ accession  
CC number AB020693. The siNAs are used to modulate expression of NOGO  
CC receptor or NOGO genes in cells, tissue explants or organisms (e.g., by  
CC ex vivo gene therapy), or in grafts and transplants for the treatment of  
CC a variety of neurodegenerative conditions such as central nervous system  
CC (CNS) injury (e.g., spinal cord injury or stroke), multiple sclerosis  
CC (MS), muscular dystrophy, chemotherapy-induced neuropathy, amyotrophic  
CC lateral sclerosis (ALS), ataxia, Parkinson's disease, Huntington's  
CC disease, dementia, Creutzfeldt-Jakob disease and especially Alzheimers  
CC disease. The siNAs may also be used in drug screening, diagnosis,  
CC therapeutic target identification and validation, genetic engineering,  
CC pharmacogenetics, studying gene function, and gene mapping (e.g., of  
CC single nucleotide polymorphisms). The present sequence represents the  
CC sense strand of a human NOGO-A-targeted double-stranded siRNA, which is  
CC identical to the NOGO-A transcript target sequence.

XX New chemically modified double stranded short interfering nucleic acid  
PT (siRNA) molecule that directs cleavage of a NOGO receptor (NOGOR) RNA via  
PT RNA interference (RNAi), useful for modulating gene expression.  
XX  
XX Disclosure; SEQ ID NO 261; 171pp; English.  
PS  
XX  
XX The invention relates to chemically synthesized short interfering nucleic  
CC acids (siNAs) which downregulate expression of a NOGO receptor gene by  
CC RNA interference. The siNAs may or may not comprise ribonucleotides, can  
CC contain deoxyribonucleotides, can be chemically modified and may be  
CC double or single stranded. They further comprise sense and antisense  
CC regions, or alternatively are assembled from a sense oligonucleotide and  
CC an antisense oligonucleotide. Specifically, the siNAs include short  
CC interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short  
CC hairpin RNA (shRNA). The invention also relates to pharmaceutical  
CC compositions comprising an siNA targeted to a NOGO receptor mRNA. It  
CC further discloses siNAs targeted to a NOGO receptor gene, siNAs targeted  
CC to a NOGO gene itself, and expression vectors and host cells comprising  
CC an siNA of the invention. In particular, the invention discloses siRNAs  
CC (AEF75903-AEF76100 and AEF76101-AEF76112) targeted to the human NOGO  
CC receptor gene of GenBank accession number BC011787, and siRNAs (AEF75451-  
CC AEF75902) targeted to the human NOGO-A (KIAA0866) gene of DBJ accession  
CC number AB020693. The siNAs are used to modulate expression of NOGO

XX  
XX The present invention describes a new composition comprising an antisense  
CC oligonucleotide (ON) with low adenosine (up to 15%), which targets  
CC nucleic acids involved in bronchoconstriction, allergies, and/or  
CC inflammation. The ON can have antiinflammatory, antiallergic,  
CC antiasthmatic, cytosolic and analgesic activities. The compositions are  
CC useful for the treatment of diseases associated with inflammation,  
CC effects afflict the lungs of a subject. They can be used for treating  
CC e.g. ischaemic conditions, respiratory distress syndrome, pain, cystic  
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
CC pulmonary disease (COPD), and cancers such as leukemias, lymphomas,  
CC carcinoma, and cancers which may metastasise to the lungs, including  
CC breast and prostate cancer. The reduction of the adenosine content of the  
CC ONs reduces side effects. The A-containing ONs break down with the  
CC release of deoxyadenosine which activates adenosine receptors causing  
CC bronchoconstriction and inflammation. AAA3313 to AAA3512 represent the  
CC nucleotide sequences given in the sequence listing from the present  
CC invention, which correspond to SEQ ID NO:1 to 185, and then the last 185  
CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ  
CC from the previously named sequences. SEQ ID NO:11 to 1680 (AAA3233 to  
CC AAA3392) are specifically claimed ONs from the present invention. N.B.  
CC Sequences given in the disclosure of the present invention do not match  
CC up with their corresponding SEQ ID NO: sequences given in the sequence  
CC listing

XX Pharmaceutical composition for treating ailments associated with impaired  
XX respiration, has oligo(s) antisense to specific gene(s) or its  
XX corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or  
XX ubiquinone.

PS Disclosure; SEQ ID NO 10743; 872bp; English.

XX The invention relates to a novel pharmaceutical composition, which has a  
XX first active agent comprising an oligonucleotide antisense to the  
XX initiation codon, coding region, 5' or 3' end genomic flanking regions,  
XX 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of  
XX junctions of genes encoding a polypeptide associated with lung and/or  
XX nasal airway dysfunction and a second active agent comprising an  
XX antiinflammatory steroid and ubiquinone. A composition of the invention  
XX has antiinflammatory, antiallergic, antiasthmatic, hypotensive,  
XX immunosuppressive, and cytostatic activity. The composition may have a  
XX use in antisense gene therapy. The composition is useful for treating or  
XX preventing a respiratory, lung or malignant disease or condition, also  
XX for enhancing the prophylactic or therapeutic respiratory effect of an  
XX antiinflammatory steroid in a subject, for reducing or depleting levels  
XX of, or reducing sensitivity to adenosine, reducing levels of ubiquinone or  
XX receptor, producing bronchodilation, increasing levels of adenosine or  
XX lung surfactant in a subject's tissue, or treating bronchoconstriction,  
XX lung inflammation, lung allergies, or a respiratory disease or condition.  
XX Note: The sequence data for this patent is not represented in the printed  
XX specification, but was obtained in electronic format directly from WIPO  
XX at ftp.wipo.int/pub/published\_pct\_sequences

XX Pharmaceutical composition for treating ailments associated with impaired  
XX respiration, has oligo(s) antisense to specific gene(s) or its  
XX corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or  
XX ubiquinone.

PS Disclosure; SEQ ID NO 10742; 872pp; English.

XX  
XX The invention relates to a novel pharmaceutical composition, which has a  
CC first active agent comprising an oligonucleotide antisense to the  
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,  
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of  
CC junctions of genes encoding a polypeptide associated with lung and/or  
CC nasal airway dysfunction and a second active agent comprising an  
CC antiinflammatory steroid and ubiquinone. A composition of the invention  
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,  
CC immunosuppressive, and cycostatic activity. The composition may have a  
CC use in antisense gene therapy. The composition is useful for treating or  
CC preventing a respiratory, lung or malignant disease or condition, also  
CC for enhancing the prophylactic or therapeutic respiratory effect of an  
CC antiinflammatory steroid in a subject, for reducing or depleting levels  
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine  
CC receptor, producing bronchodilation, increasing levels of ubiquinone or  
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,  
CC lung inflammation, lung allergies, or a respiratory disease or condition.  
CC Note: The sequence data for this patent is not represented in the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences

XX  
XX Claim 15; SEQ ID NO 10742; 763pp; English.

XX  
XX This invention describes a novel composition (a) a first active agent,  
CC comprising oligonucleotides, effective for alleviating  
CC bronchoconstriction, respiratory tract inflammation, allergies and  
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,  
CC surfactant depletion or hyposecretion, when administered to a mammal. The  
CC oligonucleotides are derived from a gene encoding or regulating  
CC expression of a target polypeptide associated with lung airway or lung  
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
CC The invention also describes a kit, that comprises: (a) a delivery  
CC device, in separate containers, (b) the oligonucleotides, (c)  
CC instructions for adding a carrier and for use of the kit. The composition  
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,  
CC analgesic, hypotensive, immunosuppressive and cycostatic activity, is a  
CC beta-adrenergic agonist. The composition is useful for preventing or  
CC treating a respiratory, lung or malignant disease. The administered  
CC composition comprises oligo and is administered to reduce the production  
CC or availability, or to increase the degradation of the target mRNA or to  
CC reduce the amount of target polypeptide present in the lungs. The  
CC pulmonary obstruction, and/or bronchoconstriction and/or lung  
CC inflammation, allergies and/or surfactant hypoproduction are associated  
CC with a disease or condition such as pulmonary vasoconstriction,  
CC inflammation, allergies, asthma, impeded respiration, respiratory  
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
CC hyperextension, emphysema, chronic obstructive pulmonary disease, pulmonary  
CC transplantation rejection, pulmonary infections, bronchitis or cancer.  
CC The reduced adenosine content of the anti-sense oligos corresponding to  
CC thymidines present in the target RNA serves to prevent the breakdown of  
CC the oligonucleotides into products that free adenosine into the system  
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
CC prevent any unwanted effects due to it

 PT central nervous system injury.  
 PT  
 XX  
 XX Claim 30; Page 152; 200pp; English.  
 PS  
 PS The invention relates to a nucleic acid molecule which down regulates  
 CC expression of a CD20 gene and a nucleic acid molecule which down  
 CC regulates expression of a neurite growth inhibitor gene (NCOG). The  
 CC nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a  
 CC DNazyme) an NCH motif, an endolytic nucleic acid cleaving a NCH motif or  
 CC an amberyzyme (cleaving RNA with an NGN triple), a zinyzyme (cleaving RNA  
 CC with a YGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
 CC of CD20 in the presence of a divalent cation that is preferably Mg<sup>2+</sup>.  
 CC Furthermore, it may be contacted with a cell to reduce CD20 activity of  
 CC the cell and treat a patient having a condition associated with the level  
 CC of CD20. The treatment may further comprise the use of one or more  
 CC therapies. In particular, the CD20 targeting nucleic acid may be used to  
 CC treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular non-  
 CC Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
 CC leukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
 CC lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
 CC immune thrombocytopenia, and inflammatory arthropathy. The NCOG-  
 CC targeting nucleic acid is used to cleave RNA of the NCOG gene in the  
 CC presence of a divalent cation that is preferably Mg<sup>2+</sup>. Furthermore, the  
 CC nucleic acid may be contacted with a cell to reduce NCOG activity of the  
 CC cell and treat a patient having a condition associated with the level of  
 CC NCOG. The treatment may further comprise the use of one or more  
 CC therapies. In particular, the NCOG-targeting nucleic acid may be used to  
 CC treat central nervous system (CNS) injury and cerebrovascular accident  
 CC (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),  
 CC chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),  
 CC Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob  
 CC disease, muscular dystrophy, and/or other neurodegenerative disease  
 CC states which respond to the modulation of NCOG expression. The present  
 CC sequence is a G-cleaver molecule of the invention

PT New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,
PT or as specific biomolecule capture probes for surface-enhanced laser
PT desorption ionization, comprises human myosin-like protein hGDMLP-1.
XX
XX Disclosure; SEQ ID NO 6968; 214pp; English.
XX
PS The present invention describes a human genome-derived myosin-like
CC protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-
CC 1 can be used in gene therapy and vaccine production. The hGDMLP-1
CC nucleic acids can be used as probes to detect, characterise and quantify
CC hGDMLP-1 nucleic acids in samples, as amplification substrates, to
CC provide initial substrates for the recombinant engineering of hGDMLP-1
CC protein variants having desired phenotypic improvements, and for
CC expressing the proteins. The hGDMLP-1 proteins or polypeptides may be
CC used as immunogens to raise antibodies that specifically recognise hGDMLP
CC -1 proteins, as standards in assays used to determine the concentration
CC and/or amount specifically of hGDMLP proteins, as specific biomolecule
CC capture probes for surface-enhanced laser desorption ionisation, as
CC therapeutic supplement in patients having specific deficiency in hGDMLP-1
CC production, and in vaccines or for replacement therapy. The
CC polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a
CC disorder associated with the expression of hGDMLP-1, in particular heart
CC and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.
CC The present sequence represents an oligomer used in the screening of the
CC hGDMLP-1 sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO

DR New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,  
 XX or as specific biomolecule capture probes for surface-enhanced laser  
 PT desorption ionization, comprises human myosin-like protein hGDMLP-1.

PS Disclosure; SEQ ID NO 6967; 214pp; English.

CC expressing the protein. The hGDMLP-1 proteins or polypeptides may be  
CC used as immunogens to raise antibodies that specifically recognise hGDMLP  
CC -1 proteins, as standards in assays used to determine the concentration  
CC and/or amount specifically of hGDMLP proteins, as specific biomolecule  
CC capture probes for surface-enhanced laser desorption/ionisation, as  
CC therapeutic supplement in patients having specific deficiency in hGDMLP-1  
CC production, and in vaccines or for replacement therapy. The  
CC polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a  
CC disorder associated with the expression of hGDMLP-1, in particular heart  
CC and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.  
CC The present sequence represents an oligomer used in the screening of the  
CC hGDMLP-1 sequence in the exemplification of the present invention. N.B.  
CC The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at [ftp.wipo.int/pub/published\\_pct\\_sequence](http://wipo.int/pub/published_pct_sequence)

XX
XX Screening for compounds that selectively bind to a rat D4 dopamine
XX receptor (DDR), useful for identifying dopamine (ant)agonists, comprises
XX exposing cells transfected with a nucleic acid encoding the DDR to
XX candidate compounds.
XX
XX Disclosure; Col 6; 29pp; English.
XX
XX The present sequence is an oligonucleotide which was used to screen a
XX lambda Dash rat spleen genomic library for D2-like receptor sequences.
XX The primer is derived from consensus sequences in rat D2 and D3 genes.
XX This method was used to isolate the rat D4 dopamine receptor gene. A cDNA
XX encoding the rat D4 dopamine receptor was expressed in transfected
XX mammalian cells and shown to preferentially bind dopamine antagonists
XX such as clozapine. The cDNA is useful for screening drugs which
XX specifically bind to the receptor and have selective effects on the
XX cardiovascular and retinal tissues through interactions with the
XX receptor. Such compounds may act as vasoregulators or may have ionotropic
XX effects. The D4 receptor protein may be used for the production of
XX polyclonal or monoclonal antibodies which recognise the D4 receptor
XX sequence but do not recognise other dopaminergic receptors. The
XX antibodies may be used in immunocytochemical studies and for
XX identification and isolation via flow sorting of D4 expressing cell types

XX Claim 21; SEQ ID NO 6618; 123pp; English.

XX The invention comprises amino acid and coding sequences containing

XX genetic polymorphisms associated with an altered risk of developing an

XX autoimmune disease (e.g. rheumatoid arthritis). The invention further

XX comprises a method of identifying an individual that has an altered risk

XX of developing an autoimmune disease, comprising detecting a single

XX nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA

XX and protein sequences of the invention are useful for diagnosing and

XX creating autoimmune diseases, such as: rheumatoid arthritis, type 1

XX diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory

XX bowel diseases, psoriasis, thyroiditis, celiac disease, pernicious

XX anaemia, asthma, vitiligo, glomerulonephritis, Grave's disease, The

XX present DNA sequence represents a human autoimmune disease-related PCR

XX primer of the invention. NOTE: The present sequence is not shown in the

XX specification, but has been retrieved from the WIPO website.

 XX  
 CC The primers of AAQ36431-32 were used in the identification of cDNA clone  
 CC encoding the Swiss 3T3 GRP Receptor. EXT 3 (AAQ36431) was used as a gene-  
 CC specific primer for reverse transcription of Swiss 3T3 mRNA, and EXT 2  
 CC (AAQ36432) was used as a gene specific primer for Taq DNA polymerase  
 CC catalysed PCR. The DNA sequences encoding mouse R1BP; human R1BP; rat  
 CC R2BP; human R2BP and human R3BP are given in AAQ29158-62 respectively.  
 CC The receptor gene and encoded polypeptide are used for screening for  
 CC agonists and antagonists of the receptor ligands, for producing  
 CC diagnostic or therapeutic reagents, and for producing antibodies. Hosts  
 CC suffering from abnormal receptor function, e.g. proliferative cell  
 CC conditions such as cancers, may be treated. The mouse GRP receptor was  
 CC isolated from Swiss 3T3 fibroblasts and sequenced. The sequence was used  
 CC to design oligonucleotide probes to isolate DNA encoding mouse GRP  
 CC receptor from a Swiss 3T3 cDNA library. This DNA was then used as a probe  
 CC to isolate rat NMB receptor, human GRP receptor, human NMB receptor and  
 CC human R3BP (incompletely characterised homologous putative receptor) from  
 CC DNA libraries. (Updated on 25-MAR-2003 to correct PN field.)

 PT Derivatives of gp120 containing modified chemokine receptor binding site

PT - and complexes with soluble CD40, for inhibiting infectivity of human  
PT immune deficiency virus and to screen for inhibitors.  
XX  
PS Example; Page 53; 92pp; English.  
XX  
CC This primer is used for the RT-PCR amplification of a chemokine receptor  
CC CXCR4. The invention provides gp120 derivative having a conformational,  
CC discontinuous chemokine receptor binding site defined by amino acids  
CC residues present in the gp120 constant regions C2, C3 and C4, and the  
CC variable region V3, and its conformation is similar to that of the  
CC receptor binding site of wild-type gp120 complexed by CD4. Exposure of  
CC the chemokine receptor binding site is increased by having at least part  
CC of a variable or constant region of wild-type gp120 removed. A stabilised  
CC complex of gp120 CD4 binding site with a soluble CD4 molecule is used to  
CC inhibit infectivity of human immune deficiency virus (HIV). Labelled  
CC gp120 derivatives are also used to screen for inhibitors of HIV  
CC infectivity. The gp120 derivatives are used for diagnosing susceptibility  
CC to HIV infection from increased levels of the chemokine receptors (at the  
CC protein or nucleic acid levels). Transgenic animals expressing CD4 and  
CC chemokine receptor are used as models for studying development of AIDS or  
CC effect/safety of therapeutic agents

XX  
XX PT Identifying compounds which modulate expression of nucleic acids, used to  
XX provide compounds having defined physical, chemical or bioactive  
XX properties, e.g. antisense activity.  
XX  
XX Example 8; Page 77; 264pp; English.  
XX  
XX A method has been developed of defining a set of compounds that modulate  
XX the expression of a target nucleic acid (tNA) sequence via binding of the  
XX compounds with the tNA sequence. The method comprises generating a  
XX library of virtual compounds in silico according to defined criteria, and  
XX evaluating in silico the binding of the virtual compounds with the tNA  
XX according to defined criteria. Also described are: (1) a method of  
XX defining a set of oligonucleotides (ONs) that modulate the expression of  
XX a tNA sequence via binding of the ONs with the tNA sequence comprising  
XX generating a library of virtual compounds in silico according to defined  
XX criteria, and evaluating in silico the binding of the virtual ONs with  
XX the tNA according to defined criteria; and (2) a method of defining a set  
XX of compounds that modulate the expression of a tNA sequence via binding  
XX of the compounds with the tNA. The methods can be used for the generation  
XX and identification of synthetic compounds having defined physical,

CC chemical or bioactive properties. Information gathered from assays of  
CC such compounds is used to identify nucleic acid sequences that are  
CC tractable to a variety of nucleotide sequence-based technologies, e.g.  
CC antisense drug discovery and target validation. AA240852 to AA41220, and  
CC AA52701 to AA52706, represent sequences used in the exemplification of  
CC the present invention

XX DR  
XX Evaluating a cellular response to an environmental compound, for use in  
XX PT toxicological analysis, involves determining or comparing the expression  
XX PT levels of at least one endogenous gene.  
XX PF  
XX Example 2; Page 25; 77pp; English.

XX  
XX The sequence represents a PCR primer from alpha1-antichymotrypsin used in  
XX CC a DDRT-PCR experiment, demonstrating the method of the invention. The  
XX CC method relates to evaluating a cellular response to an environmental  
XX CC compound, comprising determining or comparing the expression levels of at  
XX CC least one endogenous gene e.g by differential display of reverse  
XX CC transcribed mRNAs by PCR (DDRT-PCR). The method can be adapted to  
XX CC identify compounds that act on the level of endogenous gene expression  
XX CC through activating nuclear receptors. The method is useful in  
XX CC toxicological analysis, diagnostics, for diagnosing cancer (e.g.  
XX CC testicular, breast, prostate and endometrium), asthma, hypopspadia,  
XX CC cryptorchism and/or allergy, and for evaluating the efficiency of a  
XX CC treatment for hormonal deficiency or hormonal replacement therapy, in a  
XX CC human such as a post-menopausal female. The method is also useful for  
XX CC identifying environmental chemicals or pharmaceutical compositions that  
XX CC interact with endocrine systems, and for detecting chemicals that pose a  
XX CC health threat. Expression levels of endogenous genes are determined  
XX CC rapidly using a sensitive technique, and the expression of any gene can  
XX CC be monitored. The assays are far more informative than the currently used  
XX CC assays, and significantly reduces the number of animals required for the  
XX CC testing, as it is expected that essentially all the animals in a test  
XX CC group will respond to the compound

PT Transgenic mice overexpressing the neurotrophin-3 receptor, useful e.g.  
PT for studying and monitoring anxiety, depression and related disorders.

XX Example; Page 15; 38pp; Spanish.

XX The invention relates to transgenic mice which express the human  
CC neurotrophin-3 receptor (NTRK3). The transgenic mice designated TgNTRK3  
CC overexpress the wild-type NTRK3 (TRKC) gene, while those designated  
CC TgNTRK3-K14 overexpress a form of NTRK3 which has a 14 amino acid  
CC residue insert in the kinase domain. Both forms of the NTRK3 gene are  
CC under the control of the PDGF (platelet-derived growth factor) promoter.  
CC The NTRK3 gene is located in the region of human chromosome 15q24-25  
CC which is duplicated in patients with anxiety disorders, and is the most  
CC likely candidate for association with these disorders. Overexpression of  
CC NTRK3 has a trophic and proliferative effect on noradrenergic neurons,  
CC increasing the response of the noradrenergic system. The transgenic mice  
CC are used as models for studying the physiopathology of anxiety disorders,  
CC panic disorder, agoraphobia, social or simple phobias, major depression,  
CC bipolar disorder, eating disorders (e.g., drug addiction). They may also be  
CC of obesity), and substance abuse (e.g., drug addiction). They may also be  
CC used for identifying, monitoring and studying phenotypes of these  
CC disorders, particularly during treatment; and for monitoring behavioural,  
CC pharmaceutical or gene therapy-based treatments for these conditions.  
CC Sequences AAF6208-AAF6209 represent NTRK3 reverse transcription-PCR  
CC primers used in the exemplifications of the invention to study NTRK3  
CC expression in transgenic mice of the invention and in control mice

PT Human chloride channel ClC-3B as outward rectifying chloride channel with  
PT chloride selectivity and activated by forskolin in presence of cystic  
PT fibrosis transmembrane conductance regulator, useful in diagnosis of  
PT cystic fibrosis.

XX Disclosure; Page 12; 41pp; Japanese.

XX The present invention describes a human chloride channel protein (A). (A)  
CC has respiratory activity. (A) can be used in the diagnosis of and  
CC development of drugs for cystic fibrosis. (A) is a ClC-3-selective  
CC splicing subtype, which is an outward rectifying chloride channel with  
CC chloride selectivity and is activated by forskolin in the presence of  
CC cystic fibrosis transmembrane conductance regulator (CFTR). The present  
CC sequence represents a PCR primer which is used in the exemplification of  
CC the present invention

XX New NOX polypeptides and polynucleotides useful for treating or  
XX preventing e.g. neurodegenerative diseases, neurological disorders,  
XX cardiovascular diseases, muscular diseases and disorders, or  
XX immunological diseases.  
XX  
XX Example 3; Page 288; 299pp; English.  
XX  
XX The present invention relates to new NOX polypeptides. The polypeptides,  
XX polynucleotides and antibodies are useful in the manufacture of a  
XX medicament for treating or preventing neurodegenerative diseases (e.g.  
XX Alzheimer's disease, Parkinson's disease, or Huntington's disease),  
XX neurological disorders (e.g. anxiety, schizophrenia, manic depression or  
XX mental retardation), cardiovascular disease (e.g. acute heart failure,  
XX angina pectoris or myocardial infarction), muscular diseases and  
XX disorders, retinal diseases (including those involving photoreception,  
XX deafness and keratinisation disorders), cancer (e.g. ovarian cancer or  
XX melanoma), immunological disorders, inflammatory and immune diseases,  
XX bacterial, fungal, protozoal and viral infections, and reproductive  
XX system disorders. The proteins of the invention may be used to screen  
XX drugs or compounds that modulate the NOX protein activity or expression,  
XX as well as to treat disorders characterised by insufficient or excessive  
XX production of NOX protein or protein forms that have decreased or  
XX aberrant activity compared to NOX wild type protein, such as diabetes,  
XX obesity, metabolic disturbances associated with obesity, anorexia and  
XX wasting disorders associated with chronic disease and various cancers,  
XX infectious diseases and various dyslipidaemias. The nucleic acid  
XX sequences of the invention may be used in chromosome mapping, identifying  
XX an individual from minute biological samples (tissue typing), and in  
XX forensic identification of a biological sample. The present nucleic acid  
XX sequence represents a cloning PCR primer that was used in the methods of

CC the invention for amplification of the NOX TGF-beta binding gene

PT Identifying single nucleotide polymorphism (SNP) haplotype that  
PT correlates with the HLA type, useful for diagnosing an immunological or  
PT inflammatory condition, comprises providing SNPs in the major  
PT histocompatibility complex region.

XX  
PS Example 1; SEQ ID NO 3801, 175bp; English.

XX  
CC The invention relates to a method of identifying the nucleotide for each  
CC of a set of single nucleotide polymorphisms (SNPs) in the major  
CC histocompatibility complex (MHC) region in a population of individuals,  
CC comprising providing the HLA type for the individuals and identifying an  
CC SNP haplotype in the population that correlates with the HLA type, where  
CC the SNP haplotype comprises the SNPs in the MHC region. The invention  
CC also relates to a method of predicting the HLA type of an individual, a  
CC method of determining the presence or absence of an allelic variant of an  
CC MHC gene in an individual, a method of identifying an SNP haplotype that  
CC correlates with susceptibility to a disease or condition, and a method of  
CC determining the susceptibility of an individual to a disease or  
CC condition. The disease or condition is an immune disorder or inflammatory  
CC condition selected from inflammatory bowel disease, ulcerative colitis,  
CC Crohn's disease, rheumatoid arthritis, diabetes, diabetes mellitus,  
CC myasthenia gravis, vitiligo, Graves disease, Hashimoto's disease, systemic  
CC Addison's disease, gastritis, autoimmune hepatitis, rheumatism, systemic  
CC lupus erythematosus, systemic sclerosis, polymyositis, dermatomyositis,  
CC pernicious anemia, primary biliary cirrhosis, idiopathic thrombocytopenia  
CC purpura, Sjogren's syndrome, multiple sclerosis, Reiter's syndrome and  
CC psoriasis. This sequence represents a human allele-specific  
CC oligonucleotide used in the scope of the invention.

PT Novel isolated polynucleotide which is a polymorphic variant of  
PT tachykinin receptor 1 (TACR1) gene useful for expressing TACR1 protein  
PT isoform used in screening drug candidates to treat pain, depression,  
PT vomiting.

XX  
PS Claim 17; Page 14; 89pp; English.

XX  
CC The invention relates to an isolated polynucleotide sequence which  
CC comprises a tachykinin receptor 1 (TACR1) isogene (SG) that is any one of  
CC 16 SG as given in specification, where each SG comprises specific regions  
CC of the TACR1 genomic DNA appearing as ABK12169, and is defined by  
CC polymorphisms at positions (P) 3164, 3319, 3906, 4339, 4444, 92915,  
CC 94601, 94821, 94892, 94960. Also included are fragments of the TACR1  
CC isogenes and TACR1 cDNA, a transgenic non-human animal transformed with  
CC the TACR1 isogene or coding region, haplotyping (or genotyping) the TACR1  
CC of an individual by determining either the haplotype of one or both  
CC copies of the TACR1 gene, predicting the haplotype pair for the TACR1  
CC gene of an individual, identifying an association between a trait and a  
CC haplotype pair, an isolated oligonucleotide for detecting the  
CC polymorphisms, a computer system for storing and analysing polymorphism  
CC data and a genome anthology for TACR1 gene. The TACR1 isogene is useful  
CC for studying expression and function of TACR1 and expressing TACR1  
CC protein for use in screening for candidate drugs to treat diseases  
CC related to TACR1 activity. The polymorphism and haplotype data is useful  
CC for validating whether TACR1 is a suitable target for drugs to treat  
CC pain, depression, vomiting, acute inflammatory diarrhoea and opiate  
CC addiction. Screening for such drugs and reducing bias in clinical trials  
CC of such drugs. The genotyping method is useful for determining whether an  
CC individual has one of the haplotype pairs. The haplotyping method is  
CC useful for improving efficiency and outcome of several steps in discovery  
CC and development of drugs for treating the diseases. The haplotyping  
CC method is also useful for validating TACR1 as a candidate target for  
CC treating a specific condition or disease predicted to be associated with  
CC TACR1 activity. The method is also useful for screening compounds to  
CC treat a specific condition or disease predicted to be associated with  
CC TACR1 activity. The methods are useful for identifying an association  
CC between susceptibility to a disease, straging of a disease, or response to  
CC a drug. The gene for TACR1 is located on human chromosome 2. The present  
CC sequence is an allele specific oligonucleotide (ASO) probe used to detect  
CC polymorphisms in the TACR1 gene

 XX Claim 17; Page 14; 89pp; English.  
 PS  
 XX The invention relates to an isolated polynucleotide sequence which  
 CC comprises a tachykinin receptor 1 (TACR1) isogene (SG) that is any one of  
 CC 16 SG as given in specification, where each SG comprises specific regions  
 CC of the TACR1 genomic DNA appearing as ABK12169, and is defined by  
 CC polymorphisms at positions (P) 3164, 3319, 3906, 4339, 4444, 92915,  
 CC 94601, 94821, 94892, 94960. Also included are fragments of the TACR1

isogenes and TACR1 cDNA, a transgenic non-human animal transformed with the TACR1 isogene or coding region, haplotyping (or genotyping) the TACR1 of an individual by determining either the haplotype of one or both copies of the TACR1 gene, predicting the haplotype pair for the TACR1 gene of an individual, identifying an association between a trait and a haplotype pair, an isolated oligonucleotide for detecting the polymorphisms, a computer system for storing and analysing polymorphism data and a genome anthology for TACR1 gene. The TACR1 isogene is useful for studying expression and function of TACR1 and expressing TACR1 protein for use in screening for candidate drugs to treat diseases related to TACR1 activity. The polymorphism and haplotype data is useful for validating whether TACR1 is a suitable target for drugs to treat pain, depression, vomiting, acute inflammatory diarrhoea and opiate addiction, screening for such drugs and reducing bias in clinical trials of such drugs. The genotyping method is useful for determining whether an individual has one of the haplotype pairs. The haplotyping method is useful for improving efficiency and outcome of several steps in discovery and development of drugs for treating the diseases. The haplotyping method is also useful for validating TACR1 as a candidate target for treating a specific condition or disease predicted to be associated with TACR1 activity. The method is also useful for screening compounds to treat a specific condition or disease predicted to be associated with TACR1 activity. The methods are useful for identifying an association between susceptibility to a disease, staging of a disease, or response to a drug. The gene for TACR1 is located on human chromosome 2. The present sequence is an allele specific oligonucleotide (ASO) PCR primer used to detect polymorphisms in the TACR1 gene

CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions (stroke), chronic  
CC gastrointestinal tract inflammation, and inflammatory diseases such as  
CC inflammatory bowel diseases. Other disorders and diseases include  
CC cardiovascular pathologies including stroke, chronic inflammation  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
CC disorders such as allergies and poison ivy, vasospastic diseases such as  
CC angina, addition disorders such as alcoholism, neurodegenerative  
CC disorders such as acquired immune deficiency syndrome (AIDS) related  
CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
CC disorders such as peripheral neuropathy, edema, stress related and  
CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
CC effectively treat chronic conditions and other pathological states  
CC without the co-administration of substance P, and reduce the number of  
CC activated receptors while not reducing the number of quiescent NK-1  
CC receptors. Receptors not chronically stimulated are less affected,  
CC reducing side effects of treatment. ABK3834-ABK63906 represent NK-1  
CC receptor coding sequences and oligonucleotides of the invention

PT used as antiviral agents and synons.  
PS  
XX  
XX Claim 177; Page 166; 259pp; English.

A method has been developed for the identification of a nucleic acid  
CC capable of modulating a process in a biological system. The method  
CC comprises: (a) introducing into the system a random library of nucleic  
CC acid catalysts (NAC) having a substrate binding domain (SBD), comprising  
CC a random sequence, and a catalytic domain (CD); and (b) identifying NAC  
CC in systems where modulation has occurred and/or determining the sequence  
CC of at least part of the SBDs in such systems. Nucleic acid molecules with  
CC endonuclease activity and catalytic activity, from the present invention,  
CC are used to modulate gene expression in plant and mammalian cells and to  
CC cleave target nucleic acid, particularly for treating systemic diseases  
CC caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic  
CC mutations in diseased cells and to determine c-raf RNA. Specifically NACs  
CC with RNA-cleaving activity that modulate expression of the Raf gene, are  
CC used to treat cancer, restenosis, psoriasis or rheumatoid arthritis, or  
CC generally any condition associated with the level of c-raf. Introduction  
CC of sugar/phosphate modifications increases stability against nuclease and  
CC activity. AAV90922 to AAV93877 represent NACs that can be used in the  
CC method, specifically for modulating the expression of a Raf gene

 PT central nervous system injury.  
 XX  
 XX  
 XX Claim 30; Page 154; 200pp; English.  
 XX  
 CC The invention relates to a nucleic acid molecule which down regulates  
 CC expression of a CD20 gene and a nucleic acid molecule which down  
 CC regulates expression of a neurite growth inhibitor gene (NOCO). The  
 CC nucleic acids may be enzymatic nucleic acids (e.g., a ribozyme or a  
 CC DNazyme) an Inozyme (an endolytic nucleic acid cleaving an RNA molecule  
 CC possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) or  
 CC an amberzyme (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA  
 CC with a YGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
 CC of CD20 in the presence of a divalent cation that is preferably Mg<sup>2+</sup>.  
 CC Furthermore, it may be contacted with a cell to reduce CD20 activity of  
 CC the cell and treat a patient having a condition associated with the level  
 CC of CD20. The treatment may further comprise the use of one or more  
 CC therapiers. In particular, the CD20 targeting nucleic acid may be used to  
 CC treat lymphoma, leukemia, B-cell lymphoma, low-grade or follicular non-  
 CC Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
 CC leukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
 CC lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
 CC immune thrombocytopenia, and inflammatory arthropathy. The NOCO-  
 CC targeting nucleic acid is used to cleave RNA of the NOCO gene in the  
 CC presence of a divalent cation that is preferably Mg<sup>2+</sup>. Furthermore, the  
 CC nucleic acid may be contacted with a cell to reduce NOCO activity of the  
 CC cell and treat a patient having a condition associated with the level of  
 CC NOCO. The treatment may further comprise the use of one or more  
 CC therapiers. In particular, the NOCO-targeting nucleic acid may be used to  
 CC treat central nervous system (CNS) injury and cerebrovascular accident

 PT growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and  
 PT central nervous system injury.  
 XX  
 XX  
 XX Claim 88; Page 81; 200pp; English.  
 XX  
 CC The invention relates to a nucleic acid molecule which down regulates  
 CC expression of a CD20 gene and a nucleic acid molecule which down  
 CC regulates expression of a neurite growth inhibitor gene (NOCO). The  
 CC nucleic acids may be enzymatic nucleic acids (e.g., a ribozyme or a  
 CC DNazyme) an Inozyme (an endolytic nucleic acid cleaving an RNA molecule  
 CC possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) or  
 CC an amberzyme (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA  
 CC with a YGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
 CC of CD20 in the presence of a divalent cation that is preferably Mg<sup>2+</sup>.  
 CC Furthermore, it may be contacted with a cell to reduce CD20 activity of  
 CC the cell and treat a patient having a condition associated with the level  
 CC of CD20. The treatment may further comprise the use of one or more  
 CC therapiers. In particular, the CD20 targeting nucleic acid may be used to  
 CC treat lymphoma, leukemia, B-cell lymphoma, low-grade or follicular non-  
 CC Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
 CC leukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
 CC lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
 CC immune thrombocytopenia, and inflammatory arthropathy. The NOCO-  
 CC targeting nucleic acid is used to cleave RNA of the NOCO gene in the  
 CC presence of a divalent cation that is preferably Mg<sup>2+</sup>. Furthermore, the  
 CC nucleic acid may be contacted with a cell to reduce NOCO activity of the  
 CC cell and treat a patient having a condition associated with the level of  
 CC NOCO. The treatment may further comprise the use of one or more  
 CC therapiers. In particular, the NOCO-targeting nucleic acid may be used to  
 CC treat central nervous system (CNS) injury and cerebrovascular accident  
 CC (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),  
 CC chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),  
 CC Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob  
 CC disease, muscular dystrophy, and/or other neurodegenerative disease  
 CC states which respond to the modulation of NOCO expression. The present  
 CC sequence is an Inozyme of the invention

XX Treating pathological condition involving neurokinin receptor-1, e.g.  
PT pain or inflammation, by administering oligonucleotide or a non-  
PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
PT pathway.  
XX  
XX Claim 24; Page 65; 100pp; English.  
PS  
XX The invention relates to a method of treating a pathological condition  
CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
CC receptor, especially treating, attenuating or preventing pain or  
CC inflammatory condition. The method comprises administering to a mammal, a  
CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
CC which interferes with function or production of NK-1 receptors. The  
CC method is useful for treating a pathological condition characterised by  
CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
CC psychiatric and central nervous system disorders (e.g. anxiety,  
CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
CC peripheral aspects of chronic or acute pain, and for treating,  
CC attenuating or preventing pain or inflammation such as peripheral,  
CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
CC pain relating to psychiatric disorders and central nervous system  
CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), opthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions (stroke), chronic  
CC gastrointestinal tract inflammation, and inflammatory diseases such as  
CC inflammatory bowel diseases. Other disorders and diseases include  
CC cardiovascular pathologies including stroke, chronic inflammatory  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
CC disorders such as allergies and poison ivy, vasospastic diseases such as  
CC angina, addiction disorders such as alcoholism, neurodegenerative  
CC disorders such as acquired immune deficiency syndrome (AIDS) related  
CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
CC disorders such as peripheral neuropathy, oedema, stress related and  
CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
CC effectively treat chronic conditions and other pathological states  
CC without the co-administration of substance P, and reduce the number of  
CC activated receptors while not reducing the number of quiescent NK-1  
CC receptors. Receptors not chronically stimulated are less affected.  
CC reducing side effects of treatment. ABK63841-ABK63906 represent NK-1  
CC receptor coding sequences and oligonucleotides of the invention

 PT Novel enzymatic nucleic acid molecules which down regulates expression of  
 PT a sequence encoding a subunit of nuclear factor kappa B useful for  
 PT treating cancer, inflammatory disorders and autoimmune diseases.  
 XX  
 PS Claim 3; Page 39; 72pp; English.  
 XX  
 CC The invention describes an enzymatic nucleic acid molecule (I) which down  
 CC regulates expression of a sequence encoding a subunit of nuclear factor  
 CC kappa B (NFKB), where (I) is an inozyme, zinzyme, G-cleaver or amberyne  
 CC configuration. The enzymatic nucleic acid molecule is adapted to treat  
 CC cancer and is useful for down-regulating REL-A activity in a cell, for  
 CC treating a patient having a condition associated with the level of REL-A.  
 CC (I) is useful for cleaving RNA comprising a sequence of REL-A gene, in  
 CC the presence of a divalent cation, especially Mg<sup>2+</sup>. The enzymatic and  
 CC antisense nucleic acid molecules are useful for treating breast, lung,  
 CC prostate, colorectal, brain, oesophageal, stomach, bladder, pancreatic,  
 CC cervical, head and neck, ovarian cancer, melanoma, lymphoma, glioma or  
 CC multidrug resistant cancer. The method involves use of other drug  
 CC therapies such as monoclonal antibodies, REL-A-specific inhibitors or  
 CC chemotherapy including paclitaxel, docetaxel, cisplatin, methotrexate,  
 CC cyclophosphamide, doxorubicin, fluorouracil cardioplatin, edatrexate,  
 CC gemcitabine or radiation therapy. The enzymatic and antisense nucleic  
 CC acid molecules are also useful for treating inflammatory disease such as  
 CC rheumatoid arthritis, restenosis, asthma, Crohn's disease, diabetes,  
 CC obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft  
 CC rejection, gene therapy applications, ischaemia/reperfusion injury,  
 CC (central nervous system (CNS) and myocardial), glomerulonephritis,  
 CC sepsis, allergic airway inflammation, inflammatory bowel disease or  
 CC infection. This sequence represents the substrate of a novel enzymatic  
 CC nucleic acid molecule

 PT Novel short interfering RNA and enzymatic nucleic acid useful for  
 PT treating cancer, modulates the expression of a nucleic acid encoding  
 PT HER2, K-Ras, H-Ras, N-Ras, and human deficiency virus sequences.  
 XX  
 PS Claim 58; Page 110; 185pp; English.  
 XX  
 CC The invention relates to a novel short interfering RNA (siRNA) nucleic  
 CC acid molecule or an enzymatic nucleic acid molecule, that modulates  
 CC expression of a nucleic acid molecule encoding HER2, K-Ras, H-Ras, N-Ras,  
 CC human immunodeficiency virus (HIV) or a component of HIV. The nucleic  
 CC acid molecule of the invention has cytostatic, anti-HIV, and anti-  
 CC rheumatic activity. The nucleic acid molecules are useful for reducing  
 CC HER2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acids are  
 CC also useful for treating breast, ovarian, colorectal, lung, prostate,  
 CC bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences  
 CC shown in ABZ59889 - ABZ62216, ABZ64544 - ABZ6531, ABZ6520 - ABZ6524,  
 CC ABZ6530 - ABZ6585 represent substrate/target sequences for the human  
 CC ribozymes of the invention

PT Diagnosing glioma by detecting expression product of any one of 255  
PT genes; glioma endothelial markers, in brain tissue sample suspected of  
PT being neoplastic, and comparing the expression with expression in normal  
PT brain tissue sample.  
XX  
XX  
PS Example 2; SEQ ID NO 441; 114pp; English.  
XX  
CC The present invention describes a method (M1) for aiding in the diagnosis  
CC of glioma. (M1) involves detecting an expression product of at least one  
CC gene (I) in a first brain tissue sample (T) suspected of being  
CC neoplastic, where (I) is chosen from any one of 255 genes (glioma  
CC endothelial markers (GEMs)) as given in specification, and comparing the  
CC expression of (I) in (T) with expression of (I) in a second normal brain  
CC tissue sample (R), where increased expression of (I) in (T) relative to  
CC (R), identifies (T) as likely to be neoplastic. Also described: (1)  
CC treating (M2) glioma involves contacting cells of the glioma with an  
CC antibody that specifically binds to a extracellular epitope; (2)  
CC identifying (M3) a test compound as potential anticancer or anti-glioma  
CC drug involves contacting a test compound with the cell which expresses  
CC (I), monitoring an expression product of the at least one gene and  
CC identifying test compound as a potential anticancer drug if it decreases  
CC the expression of at least one gene; (3) identifying (M4) a test compound  
CC as potential anticancer or anti-glioma drug involves contacting a test  
CC compound with the cell which expresses mRNA of at least one gene  
CC identified by a tag as described above, monitoring mRNA of the gene, and  
CC identifying the test compound as a potential anticancer drug if it  
CC decreases the expression of at least one gene; and (4) inducing (M5) an  
CC immune response to glioma involves administering to a mammal, a protein  
CC or (I). (I) have cytostatic activities, and can be used to trigger immune  
CC destruction of glioma cells, and as immune response inducers. (M1) is  
CC useful for aiding in diagnosing glioma. (M2) is useful for treating multi-  
CC drug sensitive glioma in a human. (M5) is useful for inducing an immune  
CC response to a glioma in a mammal having glioma or in a mammal who has had  
CC a glioma surgically removed. The present sequence represents a human GEM  
CC long tag oligonucleotide, which is used in the exemplification of the  
CC present invention.

XX Novel double-stranded short interfering RNA molecule having first  
PT nucleotide sequence complementary to RNA encoding HER2 or its portion,  
PT and second nucleotide sequence having complementarity to first sequence,  
PT useful for treating cancer.  
XX  
XX Example 1; SEQ ID NO 1302; 143pp; English.  
PS  
XX The invention relates to a double-stranded short interfering RNA (siRNA)  
XX molecule (I) comprising a first nucleotide sequence having 19-23  
CC nucleotides complementary to an RNA sequence encoding HER2 or its  
CC portion, and a second nucleotide sequence having 19-23 nucleotides  
CC exhibiting complementarity to the first sequence, and including at least  
CC one nucleotide that is not a 2'-OH containing ribonucleotide. Also  
CC described is a method of producing a class of nucleic acid-based gene  
CC modulating agents that exhibit a high degree of specificity for RNA of a  
CC desired target. (I) is useful for modulating HER2 activity in a cell, and  
CC for treating diseases or conditions related to levels of HER2 gene  
CC expression. (I) is useful for treating cancer, such as pancreatic cancer,  
CC bladder cancer, lung cancer, breast cancer or prostate cancer. The  
CC present sequence represents a human K-Ras substrate RNA sequence for a  
CC DNAzyme (ribozyme), which is used in an example from the present  
CC invention for the identification of potential target sites in human Ras  
CC RNA.

XX DNA construct for screening modulators of cytokine-mediated transcription
PT - contg. regulatory element and a cytokine-sensitive promoter operably
PT linked to a heterologous gene.
XX
XX
XX Example 1; Page 26; 72pp; English.
PS
XX
XX A novel DNA construct comprises the present oligonucleotide (ON), which
CC contains a core a regulatory element, operably linked to a promoter,
CC which is operably linked to a heterologous gene (preferably a marker
CC gene). The gene is under the transcriptional control of the promoter and
CC the ON sequence when the ON is bound by a STAT protein activated in
CC response to IL-2, IL-3, G-CSF, GM-CSF, erythropoietin, thrombopoietin, or
CC preferably IL-4, IL-7, IL-9, IL-13 or IL-15. Cytokine responsive host
CC cells transfected with the DNA construct can be used to measure the
CC ability of a compound to act as an agonist or antagonist of cytokine
CC mediated gene transcription. In particular, they can be used to screen
CC for cytokine modulators involved in the STAT5 and/or STAT6 protein
CC signalling pathway. Following an electrophoretic mobility shift assay the
CC DNA construct was found to bind IL-4 moderately and IL-13 not determined

PT Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA  
 PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,  
 PT rheumatoid arthritis, etc., in a human patient.  
 XX  
 PS Claim 4; Page 152; 218pp; English.  
 XX  
 CC The present invention describes nucleic acid molecules which modulate the  
 CC synthesis, expression and/or stability of a mRNA encoding 1 or more  
 CC receptors of vascular endothelial growth factor (VEGF). A patient  
 CC (preferably human) having a condition associated with the level of the  
 CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing  
 CC receptor (KDR) and/or foetal liver kinase 1 (Flk-1) (e.g. tumour  
 CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be  
 CC treated by administering the nucleic acid molecule or the expression  
 CC vector to the patient. AAX67275 to AAX75752 represent specific examples  
 CC of nucleic acid molecules from the present invention

 CC This sequence is a PCR primer for DNA encoding the embryo-derived  
 CC interleukin-related factor (EDIRF) of the invention, designated human  
 CC EDIRF II. The EDIRF DNA and protein sequences (and their homologues),  
 CC antibodies (Ab) specific for EDIRF, and other modulators are used; (i) in  
 CC screening and detection assays, e.g. for chromosome mapping, tissue  
 CC typing or forensic studies; (ii) in diagnosis, prognosis or monitoring  
 CC clinical trials; and (iii) for treating or preventing EDIRF-related  
 CC diseases (especially immune, haematopoietic, differentiative,  
 CC developmental or inflammatory disease, including arthritis and psoriasis.

CC The EDIRF coding sequence, or its fragments, are also useful as probes  
 CC and primers (for detecting related sequences and disease-associated  
 CC mutations, also for mutagenesis), for expressing recombinant EDIRF and as  
 CC source of antisense, ribozyme and peptide nucleic acids for inhibiting  
 CC translation of EDIRF-derived mRNA. EDIRF is used to raise Ab (useful for  
 CC detecting EDIRF, including forms with aberrant post-translational  
 CC modification, for affinity purification and therapeutically) and to  
 CC screen for specific modulators (e.g. peptides or peptidomimetics)

 PT New antisense compound that inhibits human integrin beta3, useful e.g.  
 PT for treating or preventing infection, inflammation and tumors.  
 XX  
 PS Claim 1; Col 39; 33pp; English.  
 XX  
 CC Sequences AAA07035-A07074 represent antisense oligonucleotides targeted  
 CC to the human integrin beta 3 gene, which inhibit its expression. The  
 CC antisense oligonucleotides were designed to target different regions of  
 CC the human integrin beta 3 RNA, and were analysed for their effect on  
 CC integrin beta 3 mRNA levels by quantitative real-time PCR. GAPDH  
 CC (glyceraldehyde-3-phosphate) mRNA levels were measured as a control.  
 CC Integrins constitute one of four classes of cellular adhesion molecules,  
 CC and play an important role in cell migration, cell anchorage to  
 CC substrates and cytoadhesion signalling pathways. They are heterodimeric  
 CC cation-dependent membrane glycoproteins composed of an alpha and beta  
 CC subunit. Integrin beta 3 (also known as human endothelial glycoprotein,  
 CC GP3A, GPIIb, ITGB3, C6b1 and platelet glycoprotein 3a) is the common  
 CC beta subunit partner of the members of the beta-3 subfamily of integrins.  
 CC This family consists of the vitronectin receptor (alpha-V-beta-3) and the  
 CC fibronectin receptor (alpha-III-beta-3). Cells expressing this class of  
 CC integrin can adhere to various matrix proteins and participate in various  
 CC cytoadhesion-driven cellular responses. Integrin beta 3 is implicated in

CC conditions such as vascular stenosis, excessive bone resorption,  
CC angiogenesis (in melanoma), tumour invasion, platelet aggregation and  
CC Glanzmann's thrombasthenia. The oligonucleotides of the invention are  
CC useful for diagnosis, prevention and treatment of conditions associated  
CC with integrin beta 3 expression, such as tumour formation, inflammation,  
CC infections and the diseases mentioned above

PT Antisense inhibition of tumor necrosis factor type 1 expression for  
PT diagnosis, treatment and prevention of disease, particularly tumors.  
PS Example 10; Col 24; 34pp; English.  
XX  
XX The invention provides antisense compounds targeted to human tumour  
CC necrosis factor receptor type 1 (TNFR1) RNA. These antisense compounds  
CC can be used in a method of inhibiting the expression of TNFR1 human cells  
CC or tissues. The antisense compounds specifically hybridize with one or  
CC more nucleic acids encoding TNFR1 modulating the function of nucleic acid  
CC molecules encoding TNFR1, ultimately modulating the amount of TNFR1  
CC produced. The antisense compounds and method are useful as research  
CC reagents and diagnostics, and in the treatment and prophylaxis of  
CC infection, inflammation or tumour formation. Sequences AAZ48482-565  
CC represent antisense oligos used for inhibition of the human TNFR1 mRNA

PT Antisense inhibition of the human Smad3 gene, useful for diagnosing,  
PT preventing and treating conditions associated with Smad3 expression e.g.  
PT inflammation.  
XX  
PS Claim 11; Col 38; 31pp; English.  
XX  
XX Sequences AAZ49796-259835 represent antisense oligonucleotides targeted  
CC to the human Smad3 gene, which inhibit its expression. The antisense  
CC oligonucleotides were designed to target different regions of the human  
CC Smad3 RNA, and were analysed for their effect on Smad3 mRNA levels by  
CC quantitative real-time PCR. The Smad proteins are a family of cytosolic  
CC proteins which are involved in TGF-beta superfamily signal transduction.  
CC On ligand binding, TGF-beta superfamily proteins (such as bone  
CC morphogenetic protein (BMP), activin and TGF-betas themselves)  
CC phosphorylate Smad proteins, which then homo- or heterodimerise and  
CC translocate to the nucleus to activate target gene transcription. Smad3  
CC (also known as MADH3, hMAD3 and JVI5-2) is a member of a subgroup of Smad  
CC family transcription factors, the pathway-restricted Smads, which are  
CC regulated by TGF-beta and activins. It can heterodimerise with Smad4  
CC (US6013787-A, AAY69622), the complex being able to activate TGF-beta  
CC inducible transcription. The oligonucleotides of the invention are useful  
CC for diagnosis, prevention and treatment of conditions associated with  
CC Smad3 expression, such as tumour formation, inflammation and certain  
CC infections

 CC Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide  
 CC primer extension (SNPE) primers, and the sequences of regions flanking  
 CC sites of single nucleotide polymorphisms SNPs. The present invention  
 CC includes kits for determining the presence or absence of a SNP, using the  
 CC oligonucleotides of the invention. The PCR primers are used to amplify a  
 CC SNP flanking sequence, the SNPE primer is used as a genotyping primer.  
 CC The oligonucleotides are useful for genotyping a nucleic acid sample by  
 CC performing a single-nucleotide primer extension reaction. The  
 CC oligonucleotides are useful for determining the presence, absence or  
 CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to  
 CC assess by association analysis the genotype of an individual or group of  
 CC individuals, having a pathological phenotypic trait suspected of being  
 CC caused by one or more SNPs. Phenotypic traits include diseases e.g.  
 CC agammaglobulinaemia, diabetes insipidus, Leech-Nyhan syndrome, muscular  
 CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease,  
 CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic  
 CC traits also include symptoms of or susceptibility to multifactorial  
 CC diseases of which a component is or may be genetic such as autoimmune  
 CC diseases, including, rheumatoid arthritis, multiple sclerosis,  
 CC inflammation, cancer, nervous system diseases and infection by pathogenic  
 CC microorganism. The method is also useful in forensic investigations and  
 CC paternity analysis. The present sequence represents a PCR primer specific  
 CC for a human SNP containing DNA sequence

 PT Treating pathological condition involving neurokinin receptor-1, e.g.  
 PT pain or inflammation, by administering oligonucleotide or a non-  
 PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
 PT pathway.  
 XX  
 PS Claim 24; Page 65; 100pp; English.  
 XX  
 CC The invention relates to a method of treating a pathological condition  
 CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
 CC receptor, especially treating, attenuating or preventing pain or  
 CC inflammatory condition. The method comprises administering to a mammal, a  
 CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
 CC which interferes with function or production of NK-1 receptors. The  
 CC method is useful for treating a pathological condition characterised by  
 CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
 CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
 CC psychosia, schizophrenia), gut inflammation, arthritis, and central or  
 CC peripheral aspects of chronic or acute pain, and for treating,  
 CC attenuating or preventing pain or inflammation such as peripheral,  
 CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
 CC pain relating to psychiatric disorders and central nervous system  
 CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
 CC in a mammal, in particular human. NK-1 receptor related disorders,  
 CC diseases, or pathological conditions treatable by this method include  
 CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
 CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
 CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
 CC Crohn's disease), cardiovascular conditions (stroke), chronic  
 CC gastrointestinal tract inflammation, and inflammatory diseases such as  
 CC inflammatory bowel diseases. Other disorders and diseases include  
 CC cardiovascular pathologies including stroke, chronic inflammatory  
 CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
 CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
 CC disorders such as allergies and poison ivy, vasospastic diseases such as  
 CC angina, addiction disorders such as alcoholism, neurodegenerative  
 CC disorders such as acquired immune deficiency syndrome (AIDS) related  
 CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
 CC disorders such as peripheral neuropathy, edema, stress related and  
 CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
 CC effectively treat chronic conditions and other pathological states  
 CC without the co-administration of substance P, and reduce the number of  
 CC activated receptors while not reducing the number of quiescent NK-1  
 CC receptors. Receptors not chronically stimulated are less affected.  
 CC reducing side effects of treatment. ABK63834-ABK6396 represent NK-1  
 CC receptor coding sequences and oligonucleotides of the invention

CC The invention describes a method of identifying a human leukocyte antigen  
CC (HLA) genotype of a subject comprising: obtaining a sample comprising a  
CC template nucleic acid from the subject; amplifying the template nucleic  
CC acid with HLA allele-specific forward primers and HLA allele-specific  
CC reverse primers to form amplification products; hybridizing the  
CC amplification products with an HLA locus-specific capture oligonucleotide  
CC ; and detecting the detectable complexes to identify the HLA genotype of  
CC the subject. The present sequence represents one of 276 HLA locus-  
CC specific capture oligonucleotides of the invention.

XX Diagnosing, preventing and treating non-small cell lung cancer (NSCLC)  
PT comprises determining an expression level of an NSCLC-associated gene in  
PT a sample.

XX Disclosure; SEQ ID NO 509; 394bp; English.

XX The invention relates to a method of diagnosing non-small cell lung  
CC cancer (NSCLC) or a predisposition to developing NSCLC in a subject by  
CC determining the expression level of a NSCLC-associated gene in a  
CC biological sample derived from the subject, where an increase or decrease

CC of the level compared to a normal control level of the gene indicates  
CC that the subject suffers from or is at risk of developing NSCLC. The  
CC method is useful in diagnosing NSCLC or a predisposition to developing  
CC NSCLC in a subject. The compound, polynucleotide and the encoded  
CC polypeptide and composition are useful in treating or preventing NSCLC.

CC This sequence corresponds to an antisense oligonucleotide of genes that  
CC are differentially expressed in NSCLC cells.

 PT Treatment of airway diseases such as asthma - by topically applying  
 PT adenosine-free antisense oligonucleotide to airway epithelium of  
 PT subject.  
 XX  
 PS Example 5; Page 40; 71pp; English.

CC A method for treating airway disease in a subject has been produced,  
 CC which involves the topical administration of an essentially adenosine  
 CC free antisense oligonucleotide (ON) to the airway epithelium of the  
 CC subject. The present sequence is an antisense oligonucleotide specific  
 CC for the substance P receptor. The method can be used to treat airway  
 CC diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary  
 CC disease, bronchitis and other airway diseases characterised by an  
 CC inflammatory response. By eliminating adenosine from the antisense ON,  
 CC its liberation upon antisense degradation is prevented, thereby  
 CC preventing adenosine-induced bronchoconstriction in patients with hyper-  
 CC reactive airways

XX New antisense oligonucleotides used in treatment of, e.g. pulmonary  
XX vasoconstriction.  
XX  
XX Disclosure; Page 59; 120pp; English.  
XX  
XX The specification describes antisense oligonucleotides (AA52869-X55271)  
XX directed against at least 2 mRNAs selected from target genes, coding and  
XX non-coding regions of RNAs corresponding to target genes, gene initiation  
XX codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-  
XX end and the junction between coding and non-coding regions and all  
XX segments of RNAs encoding proteins associated with one or more diseases,  
XX conditions or mixtures. The antisense oligonucleotides may be derived  
XX from sequences AA55272-74. These multiple target oligonucleotides  
XX (specifically AA55180-271) can be used for the antisense treatment of  
XX diseases and conditions. Typical diseases and conditions are those  
XX associated with impaired respiration and inflammation, including lung  
XX diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,  
XX acute asthma, allergies, asthma, impaired respiration, respiratory  
XX distress syndrome, pain, cystic fibrosis, pulmonary hypertension,  
XX pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary  
XX disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g.  
XX colon cancer, breast cancer, lung cancer, pancreatic cancer,  
XX hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as  
XX well as all types of cancers which may metastasize or have metastasized  
XX to the lungs, including breast and prostate cancer

XX vasoconstriction, inflammation, allergies, asthma, hypertension,  
XX bronchitis, emphysema, respiratory distress syndrome, ischemia or  
XX cancers.  
XX  
XX Claim 18; Page 436; 1343pp; English.  
XX  
XX The present invention describes a new composition comprising an antisense  
XX oligonucleotide (ON) with low adenosine (up to 15%), which targets  
XX nucleic acids involved in bronchoconstriction, allergies, and/or  
XX inflammation. The ON can have antiinflammatory, antiallergic,  
XX antiaesthetic, cyostatic and analgesic activities. The compositions are  
XX useful for the treatment of diseases associated with inflammation,  
XX impaired airways, including lung disease and diseases whose secondary  
XX effects afflict the lungs of a subject. They can be used for treating  
XX e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,  
XX impaired respiration, respiratory distress syndrome, pain, cystic  
XX fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
XX pulmonary disease (COPD), and cancers such as leukemias, lymphomas,  
XX carcinomas, and cancers which may metastasize to the lungs, including  
XX breast and prostate cancer. The reduction of the adenosine content of the  
XX ONs reduces side effects. The A-containing ONs break down with the  
XX release of deoxyadenosine which activates adenosine receptors causing  
XX bronchoconstriction and inflammation. AA32313 to AA35312 represent the  
XX nucleotide sequences given in the sequence listing from the present  
XX invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185  
XX sequences are also called SEQ ID NO:1 to 185, but the sequences differ  
XX from the previously named sequences. SEQ ID NO:11 to 1680 (AA32313 to  
XX AA3392) are specifically claimed ONs from the present invention. N.B.  
XX Sequences given in the disclosure of the present invention do not match  
XX up with their corresponding SEQ ID NO: sequences given in the sequence  
XX listing

DR Low adenosine (A) content antisense oligonucleotides which do not trigger  
PT adenosine receptors during metabolism, useful e.g. for treating cancers  
PT and respiratory obstructions.  
XX  
XX  
PS Claim 14; Page 245; 1592pp; English.  
XX The present invention describes low adenosine (A) content antisense  
CC oligonucleotides and compositions (i) comprising them. In the antisense  
CC oligonucleotides the A is replaced by a 'Universal' or alternative base.  
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,  
CC immunosuppressive, antisthmatic, hypotensive and cyostatic activities.  
CC The antisense oligonucleotides and (I) can be used to down-regulate the  
CC expression and/or activity of target polypeptides associated with  
CC lung/respiratory disorders and malignancies, such as stimulating and  
CC activating peptide factors and transmitters, transcription factors,  
CC immunoglobulins and antibodies, antibody receptors, cytokines and  
CC chemokines, endogenously produced specific and non-specific enzymes,  
CC binding proteins, adhesion molecules and their receptors, cytokine and  
CC chemokine receptors, adenosine receptors, bradykinin receptors, central  
CC nervous system (CNS) and peripheral nervous and non-nervous system peptide  
CC receptors, CNS and peripheral nervous and non-nervous system peptide  
CC transmitters, defensins, growth factors, vasoactive proteins. The  
CC receptors, binding proteins and malignancy associated proteins. The  
CC antisense oligonucleotides may be used in this way to treat disorders  
CC including respiratory obstruction (especially pulmonary obstruction  
CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or  
CC surfactant hypoproduction which are associated with a disease or  
CC condition selected from pulmonary vasoconstriction, inflammation,

XX A recombinant adeno-associated virus-vectored ribozyme composition,  
PT useful for treating a disease or dysfunction of the mammalian eye e.g.  
PT retinal disease, e.g. diabetic retinopathy or age-related macular  
PT degeneration.  
XX  
XX Claim 1; Page 61; 115pp; English.  
XX  
XX The present invention describes a recombinant adeno-associated virus  
CC (AAV) vectored ribozyme composition (I). (I) comprises: (a) at least a  
CC first ribozyme that specifically cleaves an mRNA encoding a protein,  
CC polypeptide, or peptide selected from the group of rod opsin, INOS,  
CC RDS/peripherin, VEGFR1, VEGFR2, adenosine A-2B receptor, IGF-1, integrin  
CC alpha 1, integrin alpha 3, integrin alpha 5, or integrin alpha V; (b) a  
CC vector comprising a polynucleotide encoding the ribozyme, where the  
CC polynucleotide operably positioned downstream of at least a first  
CC promoter that directs expression of the polynucleotide in a selected  
CC mammalian cell transformed with the vector; (c) a viral particle  
CC comprising the ribozyme or the polynucleotide; or (d) an AAV vector  
CC comprising the ribozyme or the polynucleotide; or (e) a host cell  
CC comprising the ribozyme or the polynucleotide. Also described is a method  
CC for decreasing the amount of mRNA encoding a selected polypeptide in a  
CC retinal cell of a mammalian eye, comprising providing to the eye the  
CC composition described above, and for a time effective to specifically  
CC cleave the mRNA in the cell. (I) has ophthalmological activity, and can  
CC be used in gene therapy. (I) can be used for treating a disease or  
CC dysfunction of the mammalian eye, such as a retinal disease or retinal  
CC degeneration. (I) is also useful for manufacturing a medicament for  
CC treating the diseases mentioned above, including autoimmune dominant  
CC retinitis or a blood-retinal barrier dysfunction. (I) can also be useful  
CC for treating, decreasing the severity, or ameliorating the symptoms of a  
CC pathological condition, e.g. atrophic or pigmented lesions of the eye,  
CC blindness, a reduction in central or peripheral vision, or a reduction in  
CC total vision. AB272763 to AB272953 represent sequences used in the  
CC exemplification of the present invention

XX  
XX The invention relates to a novel pharmaceutical composition, which has a  
CC first active agent comprising an oligonucleotide antisense to the  
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,  
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of  
CC junctions of genes encoding a polypeptide associated with lung and/or  
CC nasal airway dysfunction and a second active agent comprising an  
CC antiinflammatory steroid and ubiquinone. A composition of the invention  
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,  
CC immunosuppressive, and cycostatic activity. The composition may have a  
CC use in antisense gene therapy. The composition is useful for treating or  
CC preventing a respiratory, lung or malignant disease or condition, also  
CC for enhancing the prophylactic or therapeutic respiratory effect of an  
CC antiinflammatory steroid in a subject, for reducing or depleting levels  
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine  
CC receptor, producing bronchodilation, increasing levels of ubiquinone or  
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,  
CC lung inflammation, lung allergies, or a respiratory disease or condition.

(EPIC-) EPIGENESIS PHARM INC.  
Myce JW, Li Y, Sandrasegura A, Katz E, Pabalan J, Aguilar D;  
Miller S, Tang L, Shahabuddin S;  
MPI, 2003-093058/08.  
Pharmaceutical composition for treating asthma, has antisense  
oligonucleotide containing less percentage of adenosine, targeted to  
nucleic acids associated with lung airway or lung dysfunction, and  
bronchodilating agent.  
Claim 15; SEQ ID NO 10740; 763bp; English.  
This invention describes a novel composition (a) a first active agent,  
comprising oligonucleotides, effective for alleviating  
bronchoconstriction, respiratory tract inflammation, allergies and  
reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,  
surfactant depletion or hyposecretion, when administered to a mammal. The  
oligonucleotides are derived from a gene encoding or regulating  
expression of a target polypeptide associated with lung airway or lung  
dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
The invention also describes a kit, that comprises: (a) a delivery  
device, in separate containers, (b) the oligonucleotides, (c)  
instructions for adding a carrier and for use of the kit. The composition  
of the invention has antiallergic, antiinflammatory, antiasthmatic, is a  
beta-adrenergic, hypotensive, immunosuppressive and cytostatic activity, is a  
beta-adrenergic agonist. The composition is useful for preventing or  
treating a respiratory, lung or malignant disease. The administered  
composition comprises oligo and is administered to reduce the production  
or availability, or to increase the degradation of the target mRNA or to  
reduce the amount of target polypeptide present in the lungs. The  
pulmonary obstruction, and/or bronchoconstriction and/or lung  
inflammation, allergies and/or surfactant hypoproduction are associated  
with a disease or condition such as pulmonary vasoconstriction,  
inflammation, allergies, asthma, impeded respiration, respiratory  
distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary  
transplantation rejection, pulmonary infections, bronchitis or cancer.  
The reduced adenosine content of the anti-sense oligos corresponding to  
c thymidines present in the target RNA serves to prevent the breakdown of  
the oligonucleotides into products that free adenosine into the system  
e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
prevent any unwanted effects due to it

XX Identifying new catalytic nucleic acid that modulates selected processes  
PT - especially ribozymes that cleave Raf RNA for treating cancer,  
PT restenosis, and also new ribozymes and modified nucleoside triphosphates  
PT used as antiviral agents and synthons.  
XX  
XX Claim 180; Page 177; 259pp; English.  
XX  
XX A method has been developed for the identification of a nucleic acid  
CC capable of modulating a process in a biological system. The method  
CC comprises: (a) introducing into the system a random library of nucleic  
CC acid catalyzes (NAC) having a substrate binding domain (SBD), comprising  
CC a random sequence, and a catalytic domain (CD); and (b) identifying NAC  
CC in systems where modulation has occurred and/or determining the sequence  
CC of at least part of the SBDs in such systems. Nucleic acid molecules with  
CC endonuclease activity and catalytic activity, from the present invention,  
CC are used to modulate gene expression in plant and mammalian cells and to  
CC cleave target nucleic acid, particularly for treating systemic diseases  
CC caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic  
CC ascites and infection. They may also be used to detect genetic drift and  
CC mutations in diseased cells and to determine c-rat RNA. Specifically NACs  
CC with RNA-cleaving activity that modulate expression of the Raf gene, are  
CC used to treat cancer, restenosis, psoriasis or rheumatoid arthritis, or  
CC generally any condition associated with the level of c-rat. Introduction  
CC of sugar/phosphate modifications increases stability against nuclease and  
CC activity. AAV90922 to AAV91877 represent NACs that can be used in the  
CC method, specifically for modulating the expression of a Raf gene

XX  
XX Treating pathological condition involving neurokinin receptor-1, e.g.  
PT pain or inflammation, by administering oligonucleotide or a non-  
PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
PT pathway.  
XX  
XX Claim 24; Page 65; 100pp; English.  
XX  
XX The invention relates to a method of treating a pathological condition  
CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
CC receptor, especially treating, attenuating or preventing pain or  
CC inflammatory condition. The method comprises administering to a mammal, a  
CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
CC which interferes with function or production of NK-1 receptors. The  
CC method is useful for treating a pathological condition characterised by  
CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
CC psychiatric and central nervous system disorders (e.g. anxiety,  
CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
CC peripheral aspects of chronic or acute pain, and for treating,  
CC attenuating or preventing pain or inflammation such as peripheral,  
CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
CC pain relating to psychiatric disorders and central nervous system  
CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
CC in a mammal, in particular human. NK-1 receptor related disorders,  
CC diseases, or pathological conditions treatable by this method include  
CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
CC (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and  
CC Crohn's disease), cardiovascular conditions (stroke), chronic  
CC gastro-intestinal tract inflammation, and inflammatory diseases such as  
CC cardiovascular pathologies including stroke, chronic inflammatory  
CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
CC disorders such as allergies and poison ivy, vasospastic diseases such as  
CC angina, addiction disorders such as alcoholism, neurodegenerative  
CC disorders such as acquired immune deficiency syndrome (AIDS) related  
CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
CC disorders such as peripheral neuropathy, oedema, stress related and  
CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
CC effectively treat chronic conditions and other pathological states  
CC without the co-administration of substance P, and reduce the number of  
CC activated receptors while not reducing the number of quiescent NK-1  
CC receptors. Receptors not chronically stimulated are less affected.  
CC reducing side effects of treatment. ABK63834-ABK63906 represent NK-1  
CC receptor coding sequences and oligonucleotides of the invention

 PT Deleted in Pancreatic Cancer locus 4 polypeptide - and related nucleic  
 PT acids, used in diagnosis and treatment of proliferative diseases, e.g.  
 PT cancer of pancreas or other organs.  
 XX  
 PS Example 2; Page 56; 104pp; English.  
 XX  
 CC The present sequence represents a sequence tagged site (STS) primer used  
 CC in the isolation of cosmids from the DPC4 (deleted in pancreatic cancer,  
 CC locus 4) region, and gene identification. DPC4 is a tumour suppressor  
 CC gene. Detection of truncated DPC4 protein, or of homozygous deletions or  
 CC intragenic mutations in nucleic acids encoding it, is used to diagnose (in  
 CC vivo or in vitro) proliferative diseases, especially pancreatic  
 CC carcinoma, bile duct, bladder or colorectal cancer, Crohn's disease,  
 CC colitis-associated neoplasia or chronic ulcerative colitis. These  
 CC conditions, where associated with a homozygous deletion, can be treated  
 CC by administering an agent that: (a) modulates DPC4 expression,  
 CC specifically a sense DPC4 sequence (particularly in the form of a vector,  
 CC i.e. by gene therapy), but also an antisense sequence where DPC4 protein  
 CC is over expressed or (b) mimics the activity of DPC4. DPC4 nucleic acid  
 CC is also used as hybridisation probes for detecting presence/absence of  
 CC human chromosome 18q21.1 fragments. When a homozygous deletion is  
 CC detected in this region, an agent can be administered that accumulates  
 CC within, or kills, only cells which contain such a deletion. This agent  
 CC exploits the absence of an enzyme (or other protein) encoded by a  
 CC neighbouring gene and lost by the deletion, i.e. it has a highly  
 CC selective action

PT	Purified beta-secretase protein used in assays to discover inhibitors
XX	which can be used for the treatment of amyloidogenic diseases e.g.
PP	Alzheimer's disease.
XX	
PS	Example 3, Page 66, 121pp; English.
XX	
CC	The specification describes a beta-secretase enzyme. The enzyme cleaves
CC	beta-amyloid precursor protein to produce beta-amyloid peptide. This
CC	enzyme is therefore implicated in the production of amyloid plaque
CC	components which accumulate in the brains of individuals afflicted with
CC	Alzheimer's disease. Inhibitors of beta-secretase are administered to a
CC	mammalian subject e.g. with Alzheimer's disease or Alzheimer's disease-
CC	like pathology to test if they maintain or improve cognitive ability or
CC	reduce the plaque burden. The compounds are used for the treatment of
CC	amyloidogenic diseases e.g. Alzheimer's disease. PCR primers AAA59530-49
CC	were used to amplify DNA encoding beta-secretase enzyme

 XX Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense  
 PT constructs, which down regulate expression of a CD20 gene or neurite  
 PT growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and  
 PT central nervous system injury.  
 PS Claim 30; Page 159; 200pp; English.  
 XX The invention relates to a nucleic acid molecule which down regulates  
 CC expression of a CD20 gene and a nucleic acid molecule which down  
 CC regulates expression of a neurite growth inhibitor gene (NOCO). The  
 CC nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a  
 CC DNAzyme) an NCH motif, a G-cleaver (cleaving RNA with an RNA molecule  
 CC possessing an NCH motif), a G-cleaver (cleaving RNA with an NCH motif) or  
 CC an amberzyme (cleaving RNA with an NCH motif), a zinczyme (cleaving RNA  
 CC with a XGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
 CC of CD20 in the presence of a divalent cation that is preferably Mg<sup>2+</sup>.  
 CC Furthermore, it may be contacted with a cell to reduce CD20 activity of  
 CC the cell and treat a patient having a condition associated with the level  
 CC of CD20. The treatment may further comprise the use of one or more  
 CC therapies. In particular, the CD20 targeting nucleic acid may be used to  
 CC treat lymphoma, leukemia, B-cell lymphoma, low-grade or follicular non-  
 CC Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
 CC leukemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
 CC lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
 CC immune thrombocytopenia, and inflammatory arthropathy. The NOCO-  
 CC targeting nucleic acid is used to cleave RNA of the NOCO gene in the  
 CC presence of a divalent cation that is preferably Mg<sup>2+</sup>. Furthermore, the  
 CC nucleic acid may be contacted with a cell to reduce NOCO activity of the  
 CC cell and treat a patient having a condition associated with the level of  
 CC NOCO. The treatment may further comprise the use of one or more  
 CC therapies. In particular, the NOCO-targeting nucleic acid may be used to  
 CC treat central nervous system (CNS) injury and cerebrovascular accident  
 CC (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),  
 CC chemo-therapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),  
 CC Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob  
 CC disease, muscular dystrophy, and/or other neurodegenerative disease  
 CC states which respond to the modulation of NOCO expression. The present  
 CC sequence is a DNAzyme molecule of the invention

 PT are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,  
 PT obesity and heart disease.  
 XX Example 4; Page 403; 717pp; English.  
 PS The present invention relates to the use of enzymatic nucleic acid  
 CC molecules (e.g. ribozymes) to modulate gene expression. The invention of  
 CC also methods for their use to down regulate or inhibit the expression of  
 CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine  
 CC aminopeptidase (MeAP-2), human telomerase (hTERT), protein kinase C  
 CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor  
 CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),  
 CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic  
 CC nucleic acid molecules used to inhibit the expression of the said genes  
 CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,  
 CC zinczyme, and/or DNAzyme motifs. The methods of the invention are useful  
 CC for treating cancer, in particular breast cancer, Alzheimer's disease,  
 CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related  
 CC diseases, hepatitis B infections, and hepatitis and hepatocellular  
 CC carcinoma. The enzymatic nucleic acid molecules can also be used as  
 CC diagnostic tools to examine genetic drift and mutations within diseased  
 CC cells and to detect the presence of specific RNA in a cell. The present  
 CC sequence represents a substrate/target sequence for a ribozyme used in  
 CC the examples of the present invention. Note: Some SEQ ID Nos are repeated  
 CC more than once in the specification, but these have different sequences  
 CC associated with them.

 PS  
 XX  
 XX The present invention describes a human genome-derived myosin-like  
 CC protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-  
 CC 1 can be used in gene therapy and vaccine production. The hGDMLP-1  
 CC nucleic acids can be used as probes to detect, characterise and quantify  
 CC hGDMLP-1 nucleic acids in samples, as amplification substrates, to  
 CC provide initial substrates for the recombinant engineering of hGDMLP-1  
 CC protein variants having desired phenotypic improvements, and for  
 CC expressing the proteins. The hGDMLP-1 proteins or polypeptides may be  
 CC used as immunogens to raise antibodies that specifically recognise hGDMLP  
 CC -1 proteins, as standards in assays used to determine the concentration  
 CC and/or amount specifically of hGDMLP proteins, as specific biomolecule  
 CC capture probes for surface-enhanced laser desorption/ionization, as  
 CC therapeutic supplement in patients having specific deficiency in hGDMLP-1  
 CC production, and in vaccines or for replacement therapy. The  
 CC polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a  
 CC disorder associated with the expression of hGDMLP-1, in particular heart  
 CC and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.  
 CC The present sequence represents an oligomer used in the screening of the  
 CC hGDMLP-1 sequence for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequence

PS  
XX  
XX The invention relates to a nucleic acid molecule that down-regulates  
CC expression of Grb2-related with insert domain (GRID) gene, e.g. a  
CC hammerhead ribozyme, NCH ribozyme, G-cleaver ribozyme, Zinzyne, DNAzyme,  
CC amberzyme, Inozyme and hairpin ribozyme. Also include are a mammalian cell  
CC including the novel nucleic acid molecule, reducing GRID activity in a  
CC cell by contacting the cell with the novel nucleic acid molecule,  
CC treating a patient having a condition associated with the level of GRID  
CC (e.g. tissue/graft rejection or leukaemia) by contacting the cell with  
CC the novel nucleic acid molecule, cleaving RNA of a GRID gene by  
CC contacting the cell with the novel nucleic acid molecule, an expression  
CC vector comprising a nucleic acid sequences (encoding at least the novel  
CC nucleic acid molecule in a manner that allows its expression), a  
CC mammalian cell including the expression vector and an enzymatic nucleic  
CC acid molecule that cleaves RNA derived from a GRID gene. The nucleic acid  
CC molecule is useful for treating a condition associated with the level of  
CC GRID, e.g. tissue/graft rejection and leukaemia. The present sequence is  
CC a target region for the enzymatic nucleic acids of the invention.

XX (APPL-) APPLERA CORP.  
XX Cargill M, Begovich AB, Alexander HC;  
XX WPI, 2004-728480/71.  
XX New isolated nucleic acid molecule comprises at least 8 contiguous  
XX nucleotides where one of the nucleotides is a single nucleotide  
XX polymorphism (SNP), useful for diagnosing or treating autoimmune  
XX diseases, e.g. rheumatoid arthritis.  
XX Claim 21; SEQ ID NO 6617; 123pp; English.  
XX The invention comprises amino acid and coding sequences containing  
XX genetic polymorphisms associated with an altered risk of developing an  
XX autoimmune disease (e.g. rheumatoid arthritis). The invention further  
XX comprises a method of identifying an individual that has an altered risk  
XX of developing an autoimmune disease, comprising detecting a single  
XX nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA  
XX and protein sequences of the invention are useful for diagnosing and  
XX treating autoimmune diseases, such as: rheumatoid arthritis, type 1  
XX diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory  
XX bowel diseases, psoriasis, thyroiditis, celiac disease, pernicious  
XX anaemia, asthma, vitiligo, glomerulonephritis, Grave's disease,  
XX myocarditis, Sjogren's disease, or primary systemic vasculitis. The  
XX present DNA sequence represents a human autoimmune disease-related PCR  
XX primer of the invention. NOTE: The present sequence is not shown in the  
XX specification, but has been retrieved from the WIPO website.

XX New human neurokinin-1 receptor short form protein - useful for  
XX identifying and determining substance P antagonists in arthritic  
XX patients.  
XX Example 1; Page 8; 36pp; English.  
XX Human mRNA was prepared from 3 glioblastoma cell lines T98G, CCF-SSTG1  
XX and U87MG. First strand cDNA was synthesised and used as template with  
XX rat primers rspr284, rspr284h and rspr7a2 (AAQ30774-6) in first round PCR  
XX amplification. Secondary PCR was performed on the amplified product using  
XX the same 3 primers prior to a third round of amplification, this time  
XX using the primers rspr284, rspr284h, rspr7a1 (AAQ30777) and rspr7a1h  
XX (AAQ30778). The tertiary PCR product was sequenced and was found to have  
XX 90% identity at the nucleotide level with the central core region of the  
XX rat NKIR from amino acid 91 to 280. Primer rspr284h is a sense primer  
XX based on the rat NKIR sequence 238-255 (numbering as in J.Biol.Chem. 264:  
XX 17649-17652, 1989), but designed to incorporate the human codon bias.

XX Predn. of double stranded cDNA immobilised support - by binding  
PT

PT polynucleotide with sequence complementary to poly-adenylic acid tail of  
PT mRNA to insol. support.  
XX  
XX Example 3; Page 26; 54pp; English.  
XX  
CC A polynucleotide is immobilised on an insoluble solid support and used to  
CC synthesize ds-cDNA, ss-cDNA and both sense and antisense mRNA. The  
CC advantage of this system is that RNA bound to the solid support need not  
CC be precipitated when changing solutions. Two primers were used to amplify  
CC tachykinin receptor specific mRNA after its synthesis using the above  
CC method (AA047254, AA047255). (Updated on 25-MAR-2003 to correct PN  
CC field.)

XX Enzymatic nucleic acids - which cleave RNA derived from an epidermal  
PT growth factor receptor, useful for inhibiting cell proliferation and for  
PT treating cancers.  
XX  
XX  
XX Claim 5; Page 73; 109pp; English.  
XX  
XX The present invention describes enzymatic nucleic acid molecules (NMs)  
CC which specifically cleave RNA derived from an epidermal growth factor  
CC receptor (EGF-R) gene. AAV97221 to AAV98043 and AAV98979 to AAV99090  
CC represent specifically claimed target sequence from human EGF-R. AAV98044  
CC to AAV98866 and AAV98867 to V9878 represent hammerhead ribozymes and  
CC hairpin ribozymes respectively for human EGF-R. The NMs are useful for  
CC cleaving EGF-R RNA in the treatment of a condition associated with EGFR  
CC expression levels e.g. to inhibit cell proliferation in the prevention or  
CC treatment of cancers. The NMs can also be used as diagnostic tools to  
CC examine genetic drift and mutations within diseased cells or to detect  
CC the presence of EGF-R RNA in a cell

PS  
XX  
XX The invention relates to a nucleic acid molecule which down regulates  
CC expression of a CD20 gene and a nucleic acid molecule which down  
CC regulate expression of a neurite growth inhibitor gene (NOGO). The  
CC nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a

CC DNazyme) an Inozyme (an endolytic nucleic acid cleaving a an RNA molecule  
CC possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) pr  
CC an amberzyme (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA  
CC with a YGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
CC of CD20 in the presence of a divalent cation that is preferably  $Mg^{2+}$ .  
CC Furthermore, it may be contacted with a cell to reduce CD20 activity of  
CC the cell and treat a patient having a condition associated with the level  
CC of CD20. The treatment may further comprise the use of one or more  
CC therapies. In particular, the CD20 targeting nucleic acid may be used to  
CC treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular non-  
CC Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
CC leukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
CC lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
CC immune thrombocytopenia, and inflammatory arthropathy. The NOGO-  
CC targeting nucleic acid is used to cleave RNA of the NOGO gene in the  
CC presence of a divalent cation that is preferably  $Mg^{2+}$ . Furthermore, the  
CC nucleic acid may be contacted with a cell to reduce NOGO activity of the  
CC cell and treat a patient having a condition associated with the level of  
CC NOGO. The treatment may further comprise the use of one or more  
CC therapies. In particular, the NOGO-targeting nucleic acid may be used to  
CC treat central nervous system (CNS) injury and cerebrovascular accident  
CC (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),  
CC chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),  
CC Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob  
CC disease, muscular dystrophy, and/or other neurodegenerative disease  
CC states which respond to the modulation of NOGO expression. The present  
CC sequence is a G-cleaver molecule of the invention

Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense  
constructs, which down regulate expression of a CD20 gene or neurite  
growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and  
central nervous system injury.

Claim 88; Page 131; 200PP; English.

The invention relates to a nucleic acid molecule which down regulates  
expression of a CD20 gene and a nucleic acid molecule which down  
regulates expression of a neurite growth inhibitor gene (NOGO). The  
nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a  
DNAzyme) (an endolytic nucleic acid cleaving an RNA motif) or  
possessing an NCH motif), a G-cleaver (cleaving RNA with a NTR motif) or  
an amberyze (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA  
with a VGY motif). The CD20-targeting nucleic acid is used to cleave RNA  
of CD20 in the presence of a divalent cation that is preferably Mg<sup>2+</sup>.  
Furthermore, it may be contacted with a condition associated with the level  
of CD20. The treatment may further comprise the use of one or more  
therapies. In particular, the CD20 targeting nucleic acid may be used to  
treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular non-  
Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic  
leukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell  
lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,  
immune thrombocytopenia, and inflammatory arthropathy. The NOGO-  
targeting nucleic acid is used to cleave RNA of the NOGO gene in the  
presence of a divalent cation that is preferably Mg<sup>2+</sup>. Furthermore, the  
nucleic acid may be contacted with a cell to reduce NOGO activity of the  
cell and treat a patient having a condition associated with the level of  
NOGO. The treatment may further comprise the use of one or more  
therapies. In particular, the NOGO-targeting nucleic acid may be used to  
treat central nervous system (CNS) injury and cerebrovascular accident  
(CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),  
chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),  
Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob  
disease, muscular dystrophy, and/or other neurodegenerative disease  
states which respond to the modulation of NOGO expression. The present  
sequence is an amberyze molecule of the invention

CC The present invention relates to the use of enzymatic nucleic acid  
XX molecules (e.g. ribozymes) to modulate gene expression. The invention of  
XX also methods for their use to down regulate or inhibit the expression of  
XX genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine  
XX aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C

CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor  
CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),  
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic  
CC nucleic acid molecules used to inhibit the expression of the said genes  
CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberyze,  
CC zinzyme, and/or DNazyme motifs. The methods of the invention are useful  
CC for treating cancer, in particular breast cancer, Alzheimer's disease,  
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related  
CC diseases, hepatitis B infections, and hepatitis and hepatocellular  
CC carcinoma. The enzymatic nucleic acid molecules can also be used as  
CC diagnostic tools to examine genetic drift and mutations within diseased  
CC cells and to detect the presence of specific RNA in a cell. The present  
CC sequence represents a substrate/target sequence for a ribozyme used in  
CC the examples of the present invention. Note: Some SEQ ID Nos are repeated  
CC more than once in the specification, but these have different sequences  
CC associated with them.

CC The present invention relates to the use of enzymatic nucleic acid  
CC molecules (e.g. ribozymes) to modulate gene expression. The invention  
CC also methods for their use to down regulate or inhibit the expression of  
CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1B), methionine  
CC aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C  
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor  
CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),  
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic  
CC nucleic acid molecules used to inhibit the expression of the said genes  
CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberyze,  
CC zinzyme, and/or DNazyme motifs. The methods of the invention are useful  
CC for treating cancer, in particular breast cancer, Alzheimer's disease,  
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related  
CC diseases, hepatitis B infections, and hepatitis and hepatocellular  
CC carcinoma. The enzymatic nucleic acid molecules can also be used as  
CC diagnostic tools to examine genetic drift and mutations within diseased  
CC cells and to detect the presence of specific RNA in a cell. The present  
CC sequence represents a substrate/target sequence for a ribozyme used in  
CC the examples of the present invention. Note: Some SEQ ID Nos are repeated  
CC more than once in the specification, but these have different sequences  
CC associated with them.

XX New polypeptide, for raising antibodies that recognize hGDMMP-1 proteins,  
PT or as specific biomolecule capture probes for surface-enhanced laser  
PT desorption ionization, comprises human myosin-like protein hGDMMP-1.  
XX  
XX Disclosure; SEQ ID NO 2756; 214bp; English.  
XX  
XX The present invention describes a human genome-derived myosin-like  
CC protein 1 (hGDMMP-1). The protein and polynucleotide sequences of hGDMMP-  
CC 1 can be used in gene therapy and vaccine production. The hGDMMP-1  
CC nucleic acids can be used as probes to detect, characterise and quantify  
CC hGDMMP-1 nucleic acids in samples, as amplification substrates; to  
CC provide initial substrates for the recombinant engineering of hGDMMP-1  
CC protein variants having desired phenotypic improvements, and for  
CC expressing the proteins. The hGDMMP-1 proteins or polypeptides may be  
CC used as immunogens to raise antibodies that specifically recognise hGDMMP  
CC -1 proteins, as standards in assays used to determine the concentration  
CC and/or amount specifically of hGDMMP proteins, as specific biomolecule  
CC capture probes for surface-enhanced laser desorption ionisation, as  
CC therapeutic supplement in patients having specific deficiency in hGDMMP-1  
CC production, and in vaccines or for replacement therapy. The  
CC polynucleotide sequences encoding hGDMMP-1 may be used for diagnosing a  
CC disorder associated with the expression of hGDMMP-1, in particular heart  
CC and skeletal muscle disorders. hGDMMP-1 is localised to chromosome 22.  
CC The present sequence represents an oligomer used in the screening of the  
CC hGDMMP-1 sequence in the exemplification of the present invention. N.B.  
CC The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequence

XX  
XX Novel isolated human testis expressed patched like protein (HTPL), useful  
PT for identifying agonist and antagonist and specific binding partners, and  
PT for treating subjects having defects in HTPL.  
PS Example 2; Page 623; 718pp; English.  
XX  
XX The present invention relates to human testis expressed patched like  
CC protein (HTPL, see ABV78759 to ABV78762 and AB98519 to AB98520). HTPL  
CC has two isoforms, with a few single base pair differences between the  
CC two. One of the single base pair changes introduces a premature stop  
CC codon in HTPL-S (S for short) compared to HTPL-L (L for long). HTPL  
CC shares an overall structure organisation with the patched protein. The  
CC shared structural features strongly imply that HTPL plays a role similar  
CC to that of Patched, and is a potential tumour suppressor. HTPL is  
CC important in regulating male germ cell development, and the HTPL gene was  
CC mapped to human chromosome 10p12.1. HTPL and its coding sequence are  
CC useful for diagnosing a disorder caused by mutation in HTPL, and in  
CC therapy and manufacture of a medicament for treatment or prevention of  
CC such disorder associated with decreased expression or activity of human  
CC HTPL. Such disorders include disorders of testis, or adrenal, adult and  
CC foetal liver, bone marrow, brain, kidney, lung, placenta, prostate,  
CC skeletal muscle or colon function. HTPL proteins and nucleic acids are  
CC clinically useful diagnostic markers and potential therapeutic agents for  
CC male infertility and cancer. The present oligonucleotide was used in an  
CC example from the invention

XX  
XX Novel human SH3 domain (POSH)-like signalling protein 1 polypeptide, POSHL  
PT -1, useful for treating disorders associated with decreased expression or  
PT activity of human POSHL1.  
PS Example 2; SEQ ID NO 1453; 60pp + Sequence Listing; English.  
XX  
XX The invention relates to an isolated SH3 domain (POSH)-like signalling  
CC protein 1 (POSHL 1) polypeptide (I), comprising a sequence of 730 amino  
CC acids (S1, AB883999), a sequence having 65% sequence identity to (S1),  
CC (S1) having 95% deviations, especially conservative substitutions or a  
CC fragment of the sequences comprising at least 8 contiguous amino acids.  
CC Human POSHL 1 is a proto-oncogene/oncogene product that functions as an  
CC adaptor protein that interacts with Rho family small GTPases as well as  
CC downstream components of the signal transduction pathway. (I) is useful  
CC for identifying a specific binding partner. (I) and nucleic acids (II)  
CC encoded by altered expression of human POSHL1 including diagnosing and  
CC caused by altered expression of human POSHL1 including diagnosing and  
CC treating cancer, they useful in the development of vaccines and (II) is  
CC useful in gene therapy. (II) is useful for constructing microarrays which  
CC are useful for measuring and for surveying gene expression and creating  
CC transgenic non-human animals capable of producing the proteins. The  
CC present sequence is that of a scanning oligonucleotide useful in examples  
CC of the invention. Note: The present sequence did not form part of the  
CC printed specification, but is based on sequence information supplied to  
CC Derwent by the European Patent Office

PT Human leukocyte antigen (HLA) typing, useful for judging HLA genotypes of  
PT individuals e.g. by determining immunogenetic differences when  
transplanting between them.  
XX  
PS Claim 10; Page 290; 345pp; Japanese.  
XX  
CC The invention relates to a typing kit for judging human leukocyte antigen  
CC (HLA) genotype of a sample by hybridising a substrate on which 10-24 base  
CC oligonucleotides (ABL30512-ABL31809) originating in the sequences of  
CC genes e.g. belonging to HLA class I antigens on human genome and  
CC containing gene polymorphisms as alloantigens have been immobilised as  
CC primers for amplification of cleaved nucleic acids relating to gene  
CC polymorphisms. The method is useful for judging HLA genotypes of  
CC individuals by determining immunogenetic differences before transplanting  
CC between them, providing genetic information to decide compatibility of  
CC organ and tissue for transplantation e.g. of bone marrow, kidney, liver,  
CC pancreas, langerhans islet in pancreas and cornea, susceptibility  
CC diagnosis of genetic diseases and identifying individuals

XX  
CC This invention describes a novel, efficient expression box for

CC effectively expressing an exogenous gene in filamentous blue-green algae.  
CC The box includes a promoter, a Shine-Dalgarno (SD) sequence and a target  
CC gene. This sequence represents a PCR primer associated with the  
CC amplification of TNF, described in the disclosure of the invention

PS Claim 23; SEQ ID NO 1544; 495pp; English.  
XX  
CC The invention relates to nucleic acid molecules that modulate replication  
CC of the West Nile Virus (MNV). The nucleic acid molecules are useful for  
CC treating a condition related to MNV infection e.g. pancreatitis,  
CC encephalitis, myocarditis, meningitis, neurologic infection, hepatitis,  
CC liver failure, hepatocellular carcinoma or cirrhosis. The nucleic acid  
CC molecule is selected from the group of ribozymes consisting of  
CC Hammerhead, Inozyme, G-cleaver, DNAzyme, Amberzyme and Zinzyme. The  
CC nucleic acid molecules further comprise at least five ribose residues, at  
CC least ten 2'-O-methyl modifications, phosphorothioate linkages on at  
CC least three of the 5' terminal nucleotides and a 3' end modification of a  
CC 3'-3' inverted abasic moiety. Nucleic acid molecules SEQ ID NO 1 to 37080  
CC are claimed; however, SEQ ID NO 2194-2206 and 17502-17514 are not given  
CC in the specification. The present sequence is that of a nucleic acid  
CC molecule of the invention

XX  
XX New nucleic acid molecule that modulates replication of West Nile Virus  
XX  
XX (MNV), useful for treating a condition related to MNV infection e.g.  
XX  
XX pancreatitis, meningitis, hepatocellular carcinoma or cirrhosis.  
XX  
XX Claim 23; SEQ ID NO 15214; 495bp; English.  
XX  
XX The invention relates to nucleic acid molecules that modulate replication  
XX  
XX of the West Nile Virus (MNV). The nucleic acid molecules are useful for  
XX  
XX treating a condition related to MNV infection e.g. pancreatitis,  
XX  
XX encephalitis, myocarditis, meningitis, neurologic infection, hepatitis,  
XX  
XX liver failure, hepatocellular carcinoma or cirrhosis. The nucleic acid  
XX  
XX molecule is selected from the group of ribozymes consisting of  
XX  
XX Hammerhead, Inozyme, G-cleaver, DNAzyme, Amberzyme and Zinzyme. The  
XX  
XX nucleic acid molecules further comprise at least five ribose residues, at  
XX  
XX least ten 2'-O-methyl modifications, phosphorothioate linkages on at  
XX  
XX least three of the 5' terminal nucleotides and a 3' end modification of a  
XX  
XX 3'-3', inverted abasic moiety. Nucleic acid molecules SEQ ID NO 1 to 37080  
XX  
XX are claimed; however, SEQ ID NO 2194-2206 and 17502-17514 are not given  
XX  
XX in the specification. The present sequence is that of a nucleic acid  
XX  
XX molecule of the invention

XX  
XX Novel enzymatic nucleic acid molecules which down regulate expression of  
PT a sequence encoding a subunit of nuclear factor kappa B useful for  
PT treating cancer, inflammatory disorders and autoimmune diseases.  
XX  
PS Claim 3; Page 32; 72pp; English.  
XX  
XX The invention describes an enzymatic nucleic acid molecule (I) which down  
CC regulates expression of a sequence encoding a subunit of nuclear factor  
CC kappa B (NFkB), where (I) is an inozyme, zinzyme, G-cleaver or ambenzyme  
CC configuration. The enzymatic nucleic acid molecule is adapted to treat  
CC cancer and is useful for down-regulating RBL-A activity in a cell, for  
CC treating a patient having a condition associated with the level of RBL-A.  
CC (1) is useful for cleaving RNA comprising a sequence of RBL-A gene, in  
CC the presence of a divalent cation, especially Mg<sup>2+</sup>. The enzymatic and  
CC antisenase nucleic acid molecules are useful for treating breast, lung,  
CC prostate, colorectal, brain, oesophageal, stomach, bladder, pancreatic,  
CC cervical, head and neck, ovarian cancer, melanoma, lymphoma, glioma or  
CC multidrug resistant cancer. The method involves use of other drug  
CC therapies such as monoclonal antibodies, RBL-A-specific inhibitors or  
CC chemotherapy including paclitaxel, docetaxel, cisplatin, methotrexate,  
CC cyclophosphamide, doxorubicin, fluorouracil carboplatin, edatrexate,  
CC gemcitabine or radiation therapy. The enzymatic and antisenase nucleic  
CC acid molecules are also useful for treating inflammatory disease such as  
CC rheumatoid arthritis, restenosis, asthma, Crohn's disease, diabetes,  
CC obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft  
CC rejection, gene therapy applications, ischaemia/reperfusion injury  
CC (central nervous system (CNS) and myocardial), glomerulonephritis,  
CC sepsis, allergic airway inflammation, inflammatory bowel disease or  
CC infection. This sequence represents the substrate of a novel enzymatic  
CC nucleic acid molecule

PS Example 8; SEQ ID NO 842; 103pp; English.  
XX  
XX The present invention relates to novel human zinc finger-containing  
CC proteins and their coding sequences: MD23, MD24, MD27, MD212. MD23 is  
CC encoded at chromosome 7q22.1, MD24 is encoded at chromosome 6p21.3-22.2,  
CC MD27 is encoded at chromosome 16p11.2 and MD212 is encoded at chromosome  
CC 15q26.1. The MD23, MD24, MD27, and MD212 sequences are useful in therapy,  
CC or in manufacturing a medicament for treating or preventing a disorder  
CC associated with decreased or increased expression or activity of MD23,  
CC MD24, MD27, or MD212, e.g. cancer or developmental disorders. The nucleic  
CC acids and proteins are also useful for diagnosing or monitoring a disease  
CC caused by altered expression of MD23, MD24, MD27, or MD212. The nucleic  
CC acids can also be used as probes to detect and characterize gross  
CC alterations in MD23, MD24, MD27, or MD212 genetic locus. The probes are  
CC useful in constructing microarrays for measuring gene expression. The  
CC proteins are useful as therapeutic agents for gene therapy or as  
CC vaccines. The present sequence was used to illustrate the invention.

XX The present invention relates to nucleic acid molecules which modulate  
XX the synthesis, expression and/or stability of Hepatitis C virus (HCV) or  
XX Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense  
XX and enzymatic nucleic acids such as hammerhead ribozymes, DNAzymes,  
XX inozymes, zinczymes, amberzymes, and G-cleaver ribozymes. Also disclosed  
XX are nucleic acid decoy molecules and aptamers that bind to HBV reverse  
XX transcriptase and/or HBV reverse transcriptase primer sequences, as well  
XX as oligonucleotides that specifically bind the Enhancer I region of HBV  
XX DNA. The nucleic acids may be used to modulate the expression of HBV  
XX genes and HBV viral replication. Also disclosed is a method for screening  
XX compounds and/or potential therapies directed against HBV, and compounds  
XX that modulate the expression and/or replication of HCV. The compounds and  
XX methods of the invention are useful for the treatment of degenerative and  
XX expression states related to cirrhosis, liver failure, and hepatocellular  
XX carcinoma. The present sequence represents a substrate for one of the HBV  
XX ribozyme, inozyme, G-cleaver, zinczyme, DNAzyme or amberzyme sequences  
XX disclosed in the present invention

XX  
XX The present invention relates to nucleic acid molecules which modulate  
CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or  
CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense  
CC and enzymatic nucleic acids such as hammerhead ribozymes, DNAszymes,  
CC inozymes, zinzymes, amberzymes, and G-cleaver ribozymes. Also disclosed  
CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse  
CC transcriptase and/or HBV reverse transcriptase primer sequences, as well  
CC as oligonucleotides that specifically bind the Enhancer I region of HBV  
CC DNA. The nucleic acids may be used to modulate the expression of HBV  
CC genes and HBV viral replication. Also disclosed is a method for screening  
CC compounds and/or potential therapies directed against HBV, and compounds  
CC that modulate the expression and/or replication of HCV. The compounds and  
CC methods of the invention are useful for the treatment of degenerative and  
CC disease states related to HBV and HCV infection, replication and gene  
CC expression such as cirrhosis, liver failure, and hepatocellular  
CC carcinoma. The present sequence represents a substrate for one of the HBV  
CC ribozyme, inozyme, G-cleaver, zinzyme, DNAszyme or amberzyme sequences  
CC disclosed in the present invention

XX
PT      hybridization complex.
XX
PS      Example 3; Page 103; 454pp; English.
XX
CC      The invention describes a method of predicting, diagnosing or prognosing
XX
CC      a cardiovascular disease by detection of a polynucleotide in a biological
XX
CC      sample comprising hybridizing at least one of the polynucleotide to a
XX
CC      nucleic acid material of a biological sample, thus forming a
XX
CC      hybridisation complex, and detecting the hybridisation complex. The
XX
CC      polynucleotides, polypeptides, antisense molecule, antibody and reagent
XX
CC      are useful for preparing compositions for preventing, predicting or
XX
CC      diagnosing, or a medicament for treating a cardiovascular disease, e.g.
XX
CC      arteriosclerosis, ischaemia, angina pectoris, or myocardial infarction.
XX
CC      This sequence represents a primer used to identify genes differentially
XX
CC      regulated in individuals with cardiovascular disease

XX  
PS Disclosure; Page 420; 771pp; French.  
XX  
CC The invention relates to the isolation of 6327 nucleotide sequences,  
CC fragments of at least 15 consecutive nucleotides of these nucleotides, a  
CC sequence having at least 80% identity, after optimal alignment, with the  
CC nucleotides, a sequence that hybridizes under stringent conditions with  
CC the nucleotides, or the complement, or corresponding RNA, of the  
CC nucleotides. The nucleotides are used as probes or primers for detecting,  
CC identifying, quantifying and/or amplifying nucleic acids, as in vitro  
CC sense and antisense sequences, of nucleotides involved in tumour  
CC suppression or reversion, apoptosis and or viral resistance, to produce  
CC recombinant polypeptides, and to prepare transgenic animals, as  
CC experimental models. The nucleotides (also vectors containing them and  
CC cells containing the vectors), the encoded polypeptides and antibodies  
CC (Ab) against the polypeptides are useful for prevention and/or treatment  
CC of viral infections or diseases characterized by development of tumours  
CC or cell degeneration (e.g. Alzheimer's disease or schizophrenia).  
CC Analysis of the expression of the nucleotides can be used for diagnosis  
CC and/or prognosis of these diseases. The nucleotides and polypeptides can  
CC also be used to screen for their specific interactive molecules.  
CC potentially useful for treating diseases associated with abnormal  
CC expression of the nucleotides.

 PS This invention relates to novel isolated nucleic acid sequences involved  
 CC in the phenomena of tumour suppression, tumour reversion, apoptosis  
 CC and/or resistance to viruses. The invention may be useful for the  
 CC development of compounds with a cytosolic, vinctide, neuroprotective,  
 CC neurotropic or neuroleptic activity. The DNA sequences may be useful as  
 CC probes and primers for detecting, identifying, quantifying and/or  
 CC amplifying nucleic acid, for example as one component of a gene chip, in  
 CC vitro as antisense reagents and for production of recombinant  
 CC polypeptides. The invention may therefore be useful for preparation of  
 CC pharmaceuticals for prevention and/or treatment of viral diseases that  
 CC are characterised by development of tumours or cell degeneration. The  
 CC specifically cancer but also Alzheimer's disease and schizophrenia. The  
 CC present sequence is that of a nucleic acid sequence of the invention.  
 CC Note: The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/publihedpct\_sequences

Novel enzymatic nucleic acid molecule such as DNAszymes and inozymes specifically cleaving RNA derived from hepatitis B virus and comprising one or more binding arms, useful for treating hepatitis and cirrhosis.

Disclosure; SEQ ID NO 2345; 122bp; English.

The invention relates to an enzymatic nucleic acid molecule that specifically cleaves RNA derived from hepatitis B virus (HBV) and comprising one or more binding arms, without requiring the presence of a

CC 2'-OH group within the molecule for activity. The nucleic acids are  
CC useful for treating hepatitis B virus infection, hepatitis,  
CC hepatocellular carcinoma, cirrhosis and liver failure, either alone or in  
CC combination with other therapies such as lamivudine and interferons. The  
CC nucleic acids are useful as diagnostic tools to examine genetic drift and  
CC mutations within diseased cells, for detecting the presence of HBV RNA in  
CC a cell, for the study of RNA and for down-regulating gene expression of  
CC target genes in bacterial, fungal, viral, plant or mammalian cells. This  
CC sequence represents an HBV RNA target sequence, used in the scope of the  
CC invention. Note: The sequence data for this patent is also available in  
CC electronic format from USPTO at [seqdata.uspto.gov/sequence.html](http://seqdata.uspto.gov/sequence.html).

PT Novel myosin-like protein-1, useful for treating or preventing disorder  
PT associated with decreased expression or activity of human genome-derived  
PT myosin-like protein-1 such as disorder of heart and/or skeletal muscle  
PT function.  
XX  
PS Disclosure; SEQ ID NO 7674; Opp; English.  
XX  
CC The invention relates to a novel polypeptide (I) comprising a sequence  
CC (S1) of myosin-like protein-1 (hGDMPL-1) having 2568 amino acids fully  
CC defined in the specification, a fragment of at least 8 amino acids of  
CC (S1), 95% deviation from (S1) which are conservative substitutions, and  
CC 65% identity to (S1). A polypeptide of the invention acts as a agonist or  
CC antagonist of hGDMPL-1, or as an inhibitor of hGDMPL-1 activity. A  
CC pharmaceutical composition of the invention is useful for treating or  
CC preventing a disorder associated with decreased expression or activity of  
CC hGDMPL-1, such as a disorder of heart and/or skeletal muscle function.  
CC The present sequence represents a 17-mer nucleotide, used in the  
CC invention for scanning the sequence represented in ACN63103

PT Diagnosing gastric cancer or metastatic gastric cancer comprises  
PT measuring the expression levels of RNA or protein of any of the up-  
PT and/or down-regulated genes in gastric cancers or metastatic gastric  
PT cancer.

XX Example 3; SEQ ID NO 79; 112bp; English.  
PS  
XX The invention describes a method of diagnosing gastric cancer or  
CC metastatic gastric cancer comprising measuring the expression levels of  
CC RNA or protein of at least one gene, e.g. up- and/or down-regulated genes  
CC in gastric cancers or metastatic gastric cancer. Also described are: a  
CC kit, for diagnosing gastric cancer and/or metastatic gastric cancer,  
CC comprising: a sense primer and an anti-sense primer of; a probe  
CC corresponding to; and an antibody that recognizes the protein encoded by  
CC at least one of the cited up- and down-regulated genes; and screening a  
CC suppressor of gastric cancer or metastatic gastric cancer. The methods  
CC and kits are useful for diagnosing gastric cancer or metastatic gastric  
CC cancer. Expression levels for gastric cancer-related marker genes were  
CC identified in the 4 pairs of patient samples with gastric cancer.  
CC tissues/normal tissues taken from 4 patients with gastric cancer.  
CC Competitive RT-PCR was performed to determine the amount of the gene  
CC expression of any of the up- and down-regulated genes in gastric cancer.  
CC In addition, expression level of any of the up- and down-regulated genes  
CC in metastatic gastric cancer was also identified. The amount of  
CC competitive RT-PCR products of up- and down-regulated genes in metastatic  
CC gastric cancer was higher in most tested metastatic cancer tissues than  
CC those of primary cancer tissues. This sequence represents a primer used  
CC in competitive PCR to establish which genes are up and/or down regulated  
CC in gastric and metastatic cancers.

XX

CC This invention relates to a novel probe set for identifying HLA-C (human  
CC leukocyte antigen-C) alleles in a test substance. The invention enables  
CC identification of HLA-C alleles in patients with organ transplant,  
CC cancer, diabetes and other multiple-factor diseases, and thus provides  
CC tailored medical treatment to individual patients. The present sequence  
CC is that of an oligonucleotide probe which is used in the HLA-C probe set  
CC of the present invention.

PT Probe set for specific identification of an HLA-B allele in a sample,  
PT useful e.g. in matching transplant donors and recipients, and in  
PT determining suitable treatment for patients with conditions such as  
PT cancer and diabetes mellitus.  
XX  
PS Claim 2; SEQ ID NO 27; 152bp; Japanese.  
XX  
XX The invention relates to a novel probe set for the identification of a  
CC Human Leukocyte Antigen (HLA)-B allele in a sample. The invention further  
CC includes a method for identifying an HLA-B allele using the probe set.  
CC The probe set and method are useful for identifying an HLA-B allele in a  
CC sample. The information gained is useful, for example, in matching organ  
CC donors and recipients, and in guiding clinical decisions in the treatment  
CC of diseases such as cancer and diabetes mellitus. This oligo sequence  
CC represents a probe used in the identification of a Human Leukocyte  
CC Antigen B allele of the invention.

XX New set of genes or gene sequences comprising at least 20 intestinal  
PT genes, and at least 5 enzymes, e.g. caspase, apob, aminopeptidase, etc.,  
PT useful for determining intestinal health, and/or disease of an animal or  
PT a human.

XX Example 1; Page 22; 88pp; English.

XX The invention relates a set of genes or gene sequences comprising at  
XX least 20 genes in table 1, and comprising at least 5 of: Na/glucose  
XX transporter, K/Cl channel, I-PABP, L-PABP, Cytochrome P450, caspase, beta  
XX -2-microglobin, guanylyl, calbindin, phosphatase, aldolase, actin,  
XX metallopeptidase, aminopeptidase, glycosaminotransferase, glutathion S  
XX transferase, maltase/glucosylidase, sucrase/isomaltase, butyrophilin,  
XX apob, and cytochrome C oxidase. Also included are detecting the  
XX presence/absence of an intestinal disease in an animal/human (comprising  
XX measuring, in a sample of the animal or human, expression levels of a set  
XX of genes or gene sequences, or a gene specific fragment of the genes and  
XX comparing the expression levels with a reference value), measuring an  
XX increase of the intestinal health status of an animal/human (comprising  
XX measuring in a series of samples of intestinal tissue of the animal taken  
XX at different timepoints, expression levels of a set of genes or gene  
XX sequences, or a gene specific fragment of the genes and comparing the  
XX expression levels with a reference value), a kit comprising a set of at  
XX least 2 oligonucleotide primers capable of specifically hybridizing to a  
XX set of genes (or a gene specific fragment of the genes) and a kit  
XX containing ingredients to measure protein levels of gene products encoded  
XX by genes. The set of genes or gene sequences are useful for determining  
XX intestinal health, and/or disease of an animal or a human. Expression of  
XX genes in 2 chicken strains (susceptible or resistant to Malabsorption  
XX syndrome, MAS) was studied using the differential display method.  
XX Differentially expressed genes were amplified and sequenced. cDNAs  
XX representing differentially expressed genes were analyzed for their  
XX expression levels using the LightCycler RT-PCR method. The present  
XX sequence is a PCR primer for a chicken cDNA or chicken virus sequence,  
XX used in the LightCycler PCR experiment (Note, these are not RT-PCR  
XX primers, the reverse transcription stage is accomplished using random  
XX hexamers as primers).

XX WPI; 2002-106170/14.

XX Novel isolated human G protein-coupled receptor 3 polynucleotide, useful  
PT for therapeutic purposes, for studying the expression and function of the  
PT polynucleotide, and for expressing the receptor protein.

XX Claim 16; Page 12; 63pp; English.

XX The invention relates to an isolated human G protein-coupled receptor 3,  
XX (GPR3) polynucleotide comprising a sequence which is a polymorphic  
XX variant for a reference sequence for the GPR3 gene or its fragment, or a  
XX polymorphic variant of a reference sequence for a GPR3 cDNA or its  
XX fragment, and the encoded proteins. Also include are method for  
XX genotyping/haplotyping an individual by determining the sequence of both  
XX copies of the individuals GPR3 genes and examining the sequence at the  
XX polymorphic sites included in the specification, identifying an  
XX association between a trait and at least one haplotype or haplotype pair  
XX of the GPR3 gene involves comparing the frequency of the haplotype or  
XX haplotype pair in a population exhibiting the trait with the frequency of  
XX the haplotype or haplotype pair in a reference population, where the  
XX haplotype is selected from haplotypes 1-5 defined in the specification,  
XX where a higher frequency of the haplotype or haplotype pair in the trait  
XX population than in the reference population indicates that the trait is  
XX associated with the haplotype or haplotype pair. The GPR3 polynucleotide  
XX is useful in studying the expression and function of GPR3, and in  
XX expressing GPR3 protein for use in screening for candidate drugs to treat  
XX diseases related to GPR3 activity. GPR3 is useful for studying expression  
XX of the GPR3 isogenes in vivo, for in vivo screening and testing of drugs  
XX targeted against GPR3 protein, and for testing the efficacy of  
XX therapeutic agents and compounds for disorders related to defects in  
XX adenylate cyclase activation, in a biological system. An anti-GPR3  
XX antibody is useful for studying the effect of the variation on the  
XX biological activity of GPR3 as well as on the binding affinity of  
XX candidate drugs targeting GPR3 for the treatment of disorders related to  
XX defects in adenylate cyclase activation. The present sequence is an ASO

CC (allele specific oligonucleotide) PCR primer for detecting GPR3  
CC polymorphisms

XX Identifying genetic profile associated with a neurological, psychiatric,  
PT or psychological condition, comprises screening individuals for a  
PT polymorphism in a genetic locus comprising the dopamine receptor D2  
PT (DRD2) gene.  
PS Claim 31; SEQ ID NO 1324; 634bp; English.  
XX  
XX The invention relates to a method of identifying a genetic profile  
CC associated with a neurological, psychiatric or psychological condition,  
CC phenotype or state including a sub-threshold neurological, psychiatric or  
CC psychological condition, phenotype or state in an individual, comprising  
CC screening individuals for a polymorphism in a genetic locus comprising  
CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a  
CC genetic mutation providing a genetic marker for a neurological,  
CC psychiatric, or psychological condition, state or phenotype in an  
CC individual, where the presence of a 957C polymorphism is indicative of a  
CC predisposition to developing a neurological, psychiatric or psychological  
CC condition, phenotype or state. The compositions and methods are useful  
CC for identifying a genetic profile associated with a neurological,  
CC psychiatric or psychological condition. The method enables clinicians to  
CC make a genetic or psychological diagnosis of a neurological, psychiatric or  
CC psychological condition and can thereby implement treatment or  
CC preventative or symptom-ameliorating protocols to reduce the adverse  
CC consequences of the condition. This sequence represents a human dopamine  
CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the  
CC invention.

XX  
PS Claim 10; Page 204; 307bp; English.  
XX  
XX The present invention describes a novel enzymatic nucleic acid (ENA)  
CC having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues  
CC (iii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least  
CC ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's  
CC can inhibit collagenase and streptolysin production in the synovial  
CC membrane of joints for the treatment or prevention of arthritis,  
CC particularly osteoarthritis or rheumatoid arthritis. The ENA's can also  
CC be used to treat antigen presenting cells of a donor to induce tolerance  
CC in a recipient to an alloantigen of a donor. They can also be used for  
CC enhancing graft tolerance or for treating autoimmune disease, and for  
CC treating allergies and other inflammatory conditions. The ENA's can also  
CC be used in diagnosis. Ribozyme therapy impacts on the expression of  
CC streptolysin without introducing the non-specific effects upon gene  
CC expression which accompany treatment with retinoids and dexamethasone.  
CC The concentration of ribozyme required to affect a therapeutic treatment

CC is lower than that required of antisense molecules, and is highly  
CC specific. The present sequence is used in the exemplification of the  
CC present invention

XX  
XX Kit for automated genotyping contg. pairs of PCR primers - designed to  
PT amplify polymorphic nucleotide repeat sequences, arranged in sets each  
PT with a characteristic fluorescence label, useful e.g. in detection of  
PT disease related genetic rearrangement.  
XX  
PS Disclosure; Fig 7G-2; 104pp; English.  
XX  
XX The method aims to provide a collection of highly reproducible  
CC microsatellite marker sequences (MMS) at approx. 10-50 cM intervals  
CC throughout the human genome which can be detectably labelled. The MMS are  
CC polymorphic, simple sequence repeats and can be used in automated  
CC genotyping. esp. fluorescence-based. The primers correspond to the unique  
CC DNA sequence surrounding each marker, and PCR is used to detect each  
CC polymorphism. When the MMS show considerable polymorphism (ie. a  
CC difference in the number of repeats) between individuals, the markers can  
CC be particularly informative. The MMS can be ideal for linkage studies.  
CC Kits comprise at least 4 groups, of at least 3 sets, each comprising  
CC labelled primers for PCR amplification of the DNA. Group 7 primer pairs  
CC are shown in AAg95687-734. The published size range of the D18S66 allele  
CC is 244-262 bp, and the degree of heterozygosity in the population is  
CC about 86%

XX
XX Analyzing a marker nucleic acid region of a clonal population of cells
XX that is flanked on one or both sides by members of distinct repeated
XX sequences by identifying nucleic acid sequence regions flanking the
XX marker nucleic acid region.
XX
XX Example 3; SEQ ID NO 225; 99pp; English.
XX
XX The invention relates to a method of analyzing a marker nucleic acid
XX region of a clonal population of cells that is flanked on one or both
XX sides by members of a family of distinct repeated sequences comprises
XX identifying one or more of the nucleic acid sequence regions flanking the
XX marker nucleic acid region. The method is useful in diagnosing and/or
XX monitoring a mammalian disease condition, the condition is a neoplastic
XX condition, e.g. malignant or non-malignant neoplastic condition. The
XX condition is an immunodeficiency and the screening is directed to
XX detecting specific immune cell expansion. The condition is an immune
XX response and the screening is directed to detecting specific immune cell
XX expansion. The method is useful for analyzing a marker nucleic acid
XX region of a clonal population of cells that is flanked on one or both
XX sides by members of distinct repeated sequences. The present sequence
XX represents a V segment TCR beta primer.

 PT Molecular design by exon shuffling within a library of DNA sequences.  
 XX  
 PS Example 2; Page 15; 42pp; Japanese.  
 XX  
 XX This sequence represents a thrombin inhibitor that was used in an example  
 CC of the process of the invention. The process is for molecular design, and  
 CC is carried out by shuffling exons within a library of similar DNA  
 CC sequences, followed by ranking of the products of reshuffling by their  
 CC fit to the desired functionality, and repeating the shuffling and ranking  
 CC until a product of the desired functionality is obtained. A similar  
 CC process may be carried out using polypeptide sequences. The technique can  
 CC be used for the improvement of function, and devising of new functions,  
 CC of polypeptides and nucleic acids, for a broad range of uses such as  
 CC drugs and foodstuffs. Evolution of high functional fit is rapid compared  
 CC to the use of conventional genetic evolution algorithms

 PT Novel genetic variants of selectin L lymphocyte adhesion molecule 1  
 PT (SELL) gene useful for therapeutic purposes and for expressing SELL  
 PT protein useful in identifying drugs to treat whooping cough.  
 XX  
 XX Claim 17; Page 14; 137pp; English.

The invention relates to an isolated polynucleotide (I) comprising a  
 CC nucleotide sequence which is a polymorphic variant of a reference  
 CC sequence for Selectin L Lymphocyte Adhesion Molecule 1 (SELL) gene. SELL  
 CC polypeptide is useful for screening for drugs targeting the polypeptide.  
 CC Oligonucleotides derived from (I) are used to target SELL and a haplotype  
 CC or haplotype pair of SELL gene. These are useful in developing diagnostic  
 CC tests and therapeutic treatments for neonatal pertussis (whooping cough).  
 CC (1) is useful for studying the expression and function of SELL and  
 CC expressing SELL protein for use in screening for candidate drugs to treat  
 CC diseases related to SELL activity. The polymorphism and haplotype data  
 CC are useful for validating whether SELL is a suitable target for drugs to  
 CC treat whooping cough, screening for such drugs and reducing bias in  
 CC clinical trials of such drugs. Establishing the SELL haplotype or  
 CC haplotype pair of an individual is useful for improving the efficiency  
 CC and reliability of several steps in the discovery and development of  
 CC drugs for treating diseases associated with SELL activity e.g. neonatal  
 CC pertussis (whooping cough). The haplotyping method is useful to validate  
 CC SELL as a candidate target for treating a specific condition or disease  
 CC predicted to be associated with SELL activity. The method is also useful  
 CC in screening for compounds targeting SELL to treat a specific condition  
 CC or disease predicted to be associated with SELL activity, e.g. detecting  
 CC which of the SELL haplotypes or haplotype pairs present in individual  
 CC members of a population with the specific disease of interest enables one  
 CC to screen for compounds that display the highest desired agonist or  
 CC antagonist activity for each of the most frequent SELL isoforms present  
 CC in the disease population. A polymorphic variant of SELL is useful in  
 CC studying the effect of the variation on the biological activity of SELL,  
 CC on the binding affinity of candidate drugs targeting SELL for the

CC treatment of neonatal pertussis (whooping cough) and in assays to measure  
 CC the binding affinities of one or more candidate drugs targeting the SELL  
 CC protein. ABRK5465-ABRK5559 represent SELL gene allele-specific  
 CC oligonucleotides of the invention

 PT Novel genetic variants of Solute Carrier Family 1 (Glutamate/Neutral  
 PT Amino Acid Transporter), Member 4 isoforms, for improving efficiency and  
 PT reliability in drug development for treating cancers.  
 XX  
 XX Claim 15; Page 16; 139pp; English.

The invention relates to an isolated polynucleotide (I) comprising a  
 CC first nucleotide sequence which comprises solute carrier family 1  
 CC (glutamate/neutral amino acid transporter), member 4 (SLC1A4) isoforms  
 CC (II) and an isolated polypeptide (III) comprising an amino acid sequence  
 CC which is a polymorphic variant of a reference sequence for SLC1A4  
 CC protein. Also described are methods for: (1) haplotyping or genotyping  
 CC SLC1A4 gene of an individual; (2) predicting a haplotype pair for SLC1A4  
 CC gene of an individual; (3) identifying an association between a trait and  
 CC at least one haplotype or haplotype pair of SLC1A4 gene. (III) is useful  
 CC in screening for drugs targeting (III) that are useful for treating  
 CC cancer, neurological diseases and amino acid transporter disorders. The  
 CC methods are useful for improving the efficiency and reliability of  
 CC several steps in the discovery and development of drugs for treating  
 CC diseases associated with SLC1A4 activity. The haplotyping method is also  
 CC used by the pharmaceutical research scientist to validate SLC1A4 as a  
 CC candidate target for treating a specific condition or disease predicted  
 CC to be associated with SLC1A4 activity, e.g. cancer, neurological diseases  
 CC and amino acid transporter disorders, and in the design of clinical  
 CC trials for treating a specific condition of disease associated with  
 CC SLC1A4 activity. The methods are also useful for screening compounds  
 CC targeting SLC1A4. Anti-SLC1A4 antibody is useful in diagnostic.

CC prognostic and therapeutic methods. ABK95761-ABK95877 represent SLC1A4  
 CC gene allele-specific oligonucleotides, primer extension oligonucleotides  
 CC and related PCR primers used to identify single nucleotide polymorphisms

XX Claim 17; Page 13; 135pp; English.

XX The invention describes an isolated human pyridoxal (pyridoxine, vitamin

CC B6) kinase, (PDXK) polynucleotide. The polynucleotide is useful in

CC studying the expression and function of PDXK, and in expressing PDXK

CC protein for use in screening for candidate drugs to treat PDXK related

CC diseases and for therapeutic purposes. A transgenic animal is useful for

CC studying expression of the PDXK isogenes in vivo, for in vivo screening the

CC efficacy of therapeutic agents and compounds for autoimmune polyglandular

CC disease type 1. The polypeptide is useful for studying the effect of the

CC variation on the biological activity of PDXK and the binding affinity of the

CC candidate drugs targeting PDXK for the treatment of autoimmune

CC polyglandular disease type 1. Genotyping and haplotyping is useful for

CC improving the efficacy and reliability of several steps in the discovery

CC and development of drugs for treating diseases associated with PDXK

CC activity, e.g., autoimmune polyglandular disease type 1, to validate PDXK

CC as a candidate agent for treating a specific condition or disease

CC predicted to be associated with PDXK activity, and in the design of

CC clinical trials of candidate drugs. This sequence is one of 20 (see

CC ABK16921-ABK16940) allele specific oligonucleotide (ASO) probe used for

CC detecting PDXK gene polymorphisms, described in the method of the

CC invention

PS Claim 16; Page 15; 71pp; English.  
XX  
XX The invention relates to haplotyping the human apolipoprotein A-IV  
CC (APOA4) gene of an individual, comprising determining if the individual  
CC has one of the APOA4 haplotypes or haplotype pairs fully defined in the  
CC specification. Also disclosed are genotyping oligonucleotides (or allele  
CC specific oligonucleotides, ASO) as well as methods for correlating a  
CC particular haplotype pair with a trait e.g. obesity, in a population. The  
CC APOA4 gene is located on chromosome 11q23-qter. The methods of the  
CC invention are useful to diagnose and develop treatment for disorders  
CC associated with abnormal APOA4 expression or function, for example  
CC coronary heart disease and atherosclerosis. The APOA4 isogenes and  
CC screened compounds are useful for the treatment of disorders associated  
CC with abnormal APOA4 expression or function such as coronary artery  
CC disease. The present sequence is an APOA4 allele specific  
CC oligonucleotide, ASO, probe used to detect an APOA4 polymorphism

PT Novel caspase 5 apoptosis-related cysteine protease, useful

PT therapeutically and in screening for drugs targeting protease  
PT polypeptide.  
XX  
XX Claim 14; Page 15; 115pp; English.  
XX  
XX The invention relates to single nucleotide polymorphisms in the gene  
CC encoding the human caspase 5, apoptosis-related cysteine protease (CASP5)  
CC polypeptide. A method for haplotyping the CASP5 gene in an individual  
CC comprises identifying the nucleotide at one or more polymorphic sites and  
CC determining whether one of the copies of the gene is defined by one of  
CC the CASP5 haplotypes given in the specification or whether both copies  
CC are defined by a haplotype pair. This method is useful in genotyping,  
CC whereby all possible haplotype pairs can be assigned to specific  
CC genotypes. An association between a trait and a haplotype or haplotype  
CC pair of the CASP5 gene can be identified by comparing the frequency of  
CC the haplotype or haplotype pair in a population exhibiting the trait with  
CC the frequency of the haplotype or haplotype pair in a reference  
CC population, where a higher haplotype frequency in the trait population  
CC indicates the trait is associated with the haplotype or haplotype pair.  
CC CASP5 and its corresponding DNA are used for studying the expression and  
CC function of CASP5, for use in screening for candidate drugs to treat  
CC diseases related to CASP5 activity, such as cancer (e.g. hereditary  
CC nonpolyposis colorectal cancer, gastrointestinal tumours and endometrial  
CC tumours). Sequences ABK81480-ABK81519 represent allele-specific  
CC oligonucleotide sequencing primers used to detect CASP5 gene  
CC polymorphisms

XX New haplotypes of the human chemokine (C-C motif) receptor 5 gene, useful  
PT to diagnose and treat diseases associated with its abnormal expression or  
PT function, including human immunodeficiency virus-1 infection.

XX Claim 16; Page 13; 61pp; English.  
PS  
XX The present sequence is that of an allele-specific primer used to assay a  
CC polymorphism in the human chemokine (C-C motif) receptor 5 (CCR5) gene of  
CC the invention. The specification describes haplotyping the CCR5 gene of  
CC an individual by determining if the individual has one of the CCR5  
CC haplotypes or haplotype pairs fully defined in the specification. The  
CC specification also describes an isolated polynucleotide comprising a  
CC nucleotide sequence which is a polymorphic variant of the reference CCR5  
CC gene sequence (see AB97318) and comprises an isogene defined by a  
CC haplotype described in the specification and its encoded polypeptide. The  
CC methods of the invention are useful to diagnose and develop treatment for  
CC diseases associated with abnormal expression or function of the gene. The  
CC CCR5 isogenes and the screened compounds are useful for treating human  
CC immunodeficiency virus (HIV)-1 infection and the progression to acquired  
CC immunodeficiency syndrome (AIDS). The invention has antiviral  
CC applications. The specification describes genotyping the CCR5 gene of an  
CC individual; predicting a haplotype pair for the CCR5 gene of an  
CC individual; identifying an association between a trait and a haplotype or  
CC haplotype pair of the CCR5 gene. The specification describes a  
CC composition comprising a genotyping oligonucleotide for detecting a CCR5  
CC polymorphism; a recombinant non-human organism transformed with CCR5  
CC polynucleotide expressing a CCR5 protein encoded by the variant sequence;  
CC an isolated antibody specific for the CCR5 polypeptide and a method for  
CC screening drugs targeting the CCR5 polypeptide

PT Novel genetic variants of acid phosphatase 2, lysosomal polypeptide gene  
PT useful in studying expression and function of the protein, and for

PT screening drugs to treat diseases e.g. Hodgkin's disease.  
XX  
PS Claim 17; Page 14; 109pp; English.  
XX  
XX The invention comprises the human lysosomal acid phosphatase 2 (ACP2)  
CC nucleic acid and protein sequences. Specifically, the invention relates  
CC to the discovery of 22 novel polymorphic sites within the ACP2 gene. The  
CC invention also comprises methods for haplotyping and genotyping the ACP2  
CC gene in an individual. The ACP2 gene (located on chromosome 11) encodes a  
CC lysosomal-specific enzyme that catalyzes the hydrolysis of  
CC orthophosphoric monoesters to alcohol and phosphate. The ACP2 gene and  
CC protein are pharmaceutically important in the treatment of Hodgkin's  
CC disease (HD) and acid phosphatase deficiency. The novel ACP2 gene  
CC polymorphisms of the invention are useful in haplotyping the ACP2 gene.  
CC ACP2 haplotyping is useful in validating ACP2 as a target (and designing  
CC drugs) for treating an ACP2-related disease or condition (e.g. Hodgkin's  
CC disease and acid phosphatase deficiency). The ACP2 gene polymorphisms are  
CC useful for ACP2 genotyping, which can also be used to develop diagnostic  
CC tests and therapeutic treatments. The ACP2 protein and nucleic acids of  
CC the invention are useful in the production of a transgenic animal which  
CC expresses ACP2 protein. The ACP2 nucleic acids of the invention are  
CC useful in the production of allele-specific oligonucleotides designed to  
CC genotype each of the ACP2 polymorphisms. Nucleic acids ABJ36299-ABJ36320  
CC represent claimed ACP2 allele-specific probes. Nucleic acids ABJ36321-  
CC ABJ36364 represent claimed ACP2 allele-specific PCR primers. Nucleic  
CC acids ABJ36365-ABJ36408 represent claimed ACP2 primer-extension  
CC oligonucleotides

polymorphic sites comprising a substitute haplotype for any one of haplotypes 101-194, 201-463 or haplotypes 501-515 given in the specification; where the nucleotide position of each polymorphic site corresponds to the following nucleotide position in the 32577-bp sequence: 1118 (PS1), 1773 (PS3), 1875 (PS4), 1911 (PS5), 1957 (PS6), 2087 (PS10), 2157 (PS12), 13384 (PS15), 13405 (PS16), 16200 (PS19), 17194 (PS20), 17273 (PS21), 20035 (PS26), 20047 (PS28), 20615 (PS30), 21944 (PS33), 22155 (PS35), 25705 (PS37), 25921 (PS38), 27882 (PS39), and 30618 (PS42). INDEPENDENT CLAIMS are also included for: determining whether an individual has a statin response marker I or a statin response marker II; selecting a statin therapy to provide an optimal High Density Lipoprotein Cholesterol (HDL) response in an individual; predicting an individual's High Density Lipoprotein Cholesterol (HDL) response to treatment with a statin; predicting an individual's High Density Lipoprotein Cholesterol (HDL) response to treatment with a statin; manufacturing a drug product; seeking regulatory approval for marketing a pharmaceutical formulation for treating a disease or condition in a population partially or wholly comprised by having a statin response marker I; marketing a drug product comprising a statin as at least one active ingredient for treating a disease or condition in a population partially or wholly defined by having a statin response marker I; an isolated polynucleotide comprising a first nucleotide sequence which comprises an integrin, beta 3 (ITGB3) isogene encoding a ITGB3 polypeptide, where the ITGB3 isogene consisting of isogenes 1-38 and 40-98 defined by a correspondingly numbered haplotype, where each of the isogenes comprises nucleotides 1000-2235, 4256-4716, 1317913723, 14235-14858, 16126-16619, 16930-17414, 19241-19644, 19748-20177, 2053721009, 21731-22412, 24385-24930, 25559-26029, 27822-28255, 30265-30754, and 31300-31718 of the 32577-bp sequence, except where substituted by the sequence of alleles for the ITGB3 isogene, the sequence of alleles for the polymorphic sites whose correspondingly numbered haplotype at the polymorphic sites whose nucleotide positions in the 32577-bp sequence and a second nucleotide sequence which is complementary to the first nucleotide sequence; a recombinant nonhuman organism transformed or transfected with the isolated polynucleotide, where the organism expresses an ITGB3 polypeptide encoded by the selected ITGB3 isogene; an isolated fragment of an integrin, beta 3 (ITGB3) isogene, where the fragment comprises one or more polymorphisms consisting of thymine at PS 1, guanine at PS2, cytosine at PS3, thymine at PS4, cytosine at PS5, adenine at PS6, thymine at PS7, thymine at PS8, guanine at PS9, adenine at PS10, adenine at PS11, thymine at PS12, adenine at PS13, guanine at PS 16, adenine at PS 18, thymine at PS 19, guanine at PS21, guanine at PS22, cytosine at PS23, thymine at PS24, thymine at PS25, adenine at PS26, adenine at PS27, cytosine at PS29, adenine at PS30, cytosine at PS31, guanine at PS38, adenine at PS33, adenine at PS35, cytosine at PS37, thymine at PS38, cytosine at PS39, adenine at PS40, thymine at PS41, thymine at PS42, guanine at PS43 and guanine at PS44; a genome anthology for the integrin, beta 3 (ITGB3) gene which comprises two or more ITGB3 isogenes consisting of isogenes 1-98, where each of the selected isogenes is defined by a correspondingly numbered haplotype given in the specification, and where each of the isogenes comprises nucleotides 1000-2235, 4256-4716, 13179-13723, 14235-14858, 16126-16619, 16930-17414, 19241-19644, 19748-20177, 2053721009, 21731-22412, 24385-24930, 2555926029, 27822-28255, 30265-30754, and 31300-31718 of the 32577-bp sequence except where substituted by the sequence of alleles for the correspondingly numbered haplotype at the sequence of alleles for the integrin, beta 3 (ITGB3) gene of file polymorphic sites; haplotyping the integrin, beta 3 (ITGB3) gene of an individual; assigning a haplotype pair for the integrin, beta 3 (ITGB3) gene to an individual; reducing the potential for bias in a clinical trial of a candidate drug for treating a disease or condition predicted to be associated with ITGB3 activity; an isolated polypeptide comprising a ITGB3 protein variant consisting of protein variants A, B, C, D, E, F and G and comprising 788-amino acid sequence, except where substituted by the corresponding sequence of amino acids whose positions and alleles are given in the specification; an isolated monoclonal antibody specific for and immunoreactive with the selected ITGB3 protein variant comprising the isolated polypeptide; screening for drugs targeting the selected ITGB3 protein variant comprising the isolated polypeptide; an isolated fragment of an ITGB3 protein variant, where the fragment is at least 6 amino acids in length and comprises one or more variant amino acids consisting of methionine at a position corresponding to amino acid position 66, methionine at a position corresponding to amino acid position 445, and glutamine at a position corresponding to amino acid position 515 the 788-amino acid sequence; screening for drugs targeting

the selected ITGB3 protein variant comprising the isolated polypeptide; screening for compounds targeting the ITGB3 protein to treat a condition or disease predicted to be associated with ITGB3 activity; validating the ITGB3 protein as a candidate target for treating a medical condition predicted to be associated with ITGB3 activity; and an isolated oligonucleotide designed for detecting a polymorphism in the integrin, beta 3 (ITGB3) gene at a polymorphic site (PS) consisting of PS1-PS44, where the oligonucleotide contains or is located one to several nucleotides downstream of the selected PS, where the oligonucleotide has a length of about 15 to about 100 nucleotides. Preferred Kit: The kit further comprises a manual with instructions for performing one or more reactions on a human nucleic acid sample to identify the allele(s) present in the individual at each polymorphic site in the set of polymorphic sites and determining if the individual has a statin response marker I or a statin response marker II based on the identified allele(s). The set of oligonucleotides is designated for identifying both alleles at each polymorphic site of the selected set of polymorphic sites. The set of PSs comprises PS3, PS12 and PS42; PS 1, PS12 and PS42; PS3 and PS42; PS1 and PS42; PS1, PS3, PS12 and PS42; or PS39. The set of PS 18 PS3, PS12 or PS42. The individual is Caucasian. The linkage disequilibrium between the linked haplotype and any one of haplotypes 101-194, 201-463 or 501-515 has  $r^2 \geq 0.2$  consisting of at least 0.75, at least 0.80, at least 0.85, at least 0.90, at least 0.95 or 1.0. At least one of the oligonucleotides in the set of oligonucleotides is an allele-specific oligonucleotide comprising a nucleotide sequence consisting of 10-15 bp. The set of polymorphic sites is PS3, PS12, and PS42 and the set of oligonucleotides comprises first, second and third allele-specific oligonucleotide (ASO) probes, where the first ASO probe comprises 15-bp sequence, or its complement, and S in the 15-bp sequence is guanine; the second ASO probe comprises 15-bp sequence, or its complement, and Y in the 15-bp sequence is cytosine; the third ASO probe comprises 15 bp, or its complement, and Y in the 15-bp sequence is cytosine. Preferred Article: The article of manufacture comprises a pharmaceutical formulation and at least one indicium identifying a population for whom the pharmaceutical formulation is indicated, where the pharmaceutical formulation comprises a statin as at least one active ingredient and the identified population is partially or wholly defined by having a statin response marker I, where a trial population to the pharmaceutical marker I exhibits a better HDL response to the pharmaceutical formulation than to treatment with atorvastatin or a salt of atorvastatin acid. It also comprises packaging material, where the formulation contained within the packaging material, where the pharmaceutical formulation comprises a statin as at least one separate active ingredient, and the packaging material formulation is indicated for a which states that the pharmaceutical formulation is indicated for a population partly or wholly defined by having a statin response marker I, where a trial population having the statin response marker exhibits a better HDL response to the pharmaceutical formulation than to treatment with atorvastatin or a salt of atorvastatin acid. Preferred Oligonucleotide: The isolated oligonucleotide is an allele-specific oligonucleotide that specifically hybridizes to an allele of the ITGB3 gene at a region containing the polymorphic site. The isolated oligonucleotide is a primer-extension oligonucleotide. The kit is for haplotyping the integrin, beta 3 (ITGB3) gene of all individual, comprises a set of oligonucleotides designed for identifying at least one of the alleles at each polymorphic site (PS) in a set of two or more polymorphic sites. Preferred Method: Determining whether an individual has a statin response marker I or a statin response marker II comprises determining the copy number in the individual of the haplotype, where if the selected haplotype is one of haplotypes given in the specification, then the individual has a statin response marker I if the individual has at least one copy of the selected haplotype and a statin response marker II if the individual has zero copy of the selected haplotype and the individual has a statin response marker I if the individual has one copy of the selected haplotype and a statin response marker I if the individual has two copies of the selected haplotype. The determining step comprises genotyping each polymorphic site in a set of polymorphic sites comprising the selected haplotype and using the results of the genotyping step to identify, for the set of polymorphic sites the haplotype pair present in the individual. The determining step comprises consulting a data repository that provides information on the copy number present in the individual for the selected haplotype. The data repository is the

CC individual's medical records or a medical data card. Assigning an  
CC individual to a first or second statin response marker group comprises  
CC determining the copy number in the individual or a haplotype and  
CC assigning the individual to the first statin response marker group if the  
CC individual has at least one copy of the selected haplotype and to the  
CC second statin response marker group if the individual has zero copy of  
CC the selected haplotype; and assigning the individual to the first statin  
CC response marker group if the individual has zero or one copy of the  
CC selected haplotype and to the second statin response marker group if the  
CC individual has two copies of the selected haplotype. The determining step  
CC comprises genotyping each polymorphic site in a set of polymorphic sites

XX Producing a repertoire of random peptides on the surface of adeno-  
PT associated virus (AAV) particles, useful for gene therapy, comprises  
PT expressing in a recombinant host cell nucleic acids encoding a diverse  
PT population of peptides.

XX Example 1; Page 18; 36pp; English.

XX The specification describes a method for producing a repertoire of random  
CC peptides on the surface of adeno-associated virus (AAV) particles. The  
CC method comprises expressing in a recombinant host cell nucleic acids  
CC encoding a diverse population of peptides, where each peptide is  
CC expressed as a fusion with an AAV capsid protein of an AAV particle which  
CC displays at its surface the diverse population of peptides, and the AAV  
CC particle have the ability to replicate provided by genetic information  
CC packaged with it and a helper vector providing the adenovirus helper  
CC functions. The capsid protein is VP1, VP2, or VP3 protein. The method is  
CC useful for producing a repertoire of random peptides on the surface of  
CC AAV particles. The method is useful in gene therapy, where the AAV  
CC vectors obtained are useful for treating diseases associated with a  
CC dysfunction of human coronary artery endothelial cells, e.g. coronary  
CC heart disease or cardiovascular diseases. They are also useful for

CC treating infectious diseases. The present primer was used for second  
CC strand synthesis of an oligonucleotide that encodes a random 7 residue  
CC peptide insert at position 3967 in the AAV genome. It was used to  
CC generate random peptide libraries in the plasmid level.

XX Use of tachykinin antagonist or agonist for treating diseases mediated by  
PT binding of tachykinin ligand to its platelet associated receptor and  
PT failure of platelet having tachykinin receptor to aggregate normally in  
PT presence of tachykinin.

XX Disclosure; Page 21; 46pp; English.

XX The invention relates to the use of a tachykinin antagonist in the  
CC manufacture of a medicament for treating e.g. a disease mediated by  
CC binding of a tachykinin ligand to its platelet associated receptor. A  
CC method of identifying an antagonist or agonist of tachykinin having a  
CC platelet associated tachykinin receptor involves contacting a compound to  
CC be evaluated with platelets expressing the tachykinin receptor in the  
CC presence of the tachykinin and monitoring for an increase or decrease of  
CC platelet aggregation. The agonist is useful in the manufacture of a  
CC medicament in bulk quantities for treating a disease or conditions  
CC mediated by binding of a tachykinin ligand to its platelet-associated  
CC receptor (e.g. thrombosis), and by a failure of or a reduced ability of  
CC platelet having a tachykinin receptor to aggregate normally in the  
CC presence of the tachykinin; antagonizing or stimulating the effect of  
CC tachykinin on platelet associated tachykinin receptor; and stimulating  
CC platelet aggregation (e.g. wound healing). Sequences ADN12182-ADN12193  
CC represent PCR primers for amplifying tachykinin receptors NK1, NK2 and  
CC NK3.

 XX Treatment of airway diseases such as asthma - by topically applying  
 PT adenosine-free antisense oligonucleotide to airway epithelium of  
 PT subject.  
 PT  
 XX Example 5; Page 42; 71pp; English.  
 PS  
 XX A method for treating airway disease in a subject has been produced,  
 CC which involves the topical administration of an essentially adenosine  
 CC free antisense oligonucleotide (ON) to the airway epithelium of the  
 CC subject. The present sequence is an antisense oligonucleotide specific  
 CC for endothelial nitric oxide. The method can be used to treat airway  
 CC diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary  
 CC disease, bronchitis and other airway diseases characterised by an  
 CC inflammatory response. By eliminating adenosine from the antisense ON,  
 CC its liberation upon antisense degradation is prevented, thereby  
 CC preventing adenosine-induced bronchoconstriction in patients with hyper-  
 CC reactive airways

 XX Detection and characterisation of nucleic acid sequences - by mixing a  
 PT folded target and one or more probes to form a probe/folded target  
 PT complex and detecting and characterising the complexes.  
 PT  
 XX Example 8; Page 129; 279pp; English.  
 PS  
 XX The invention relates to methods and compositions of detection and  
 CC characterisation of nucleic acid sequences and sequence changes. One  
 CC method of detection and characterisation comprises: (a) providing: (i) a  
 CC folded target having a DNA sequence comprising at least 1 double stranded  
 CC region and at least 1 single stranded region; and (ii) at least 1 probe  
 CC complementary to at least a portion of the folded target; and (b) mixing  
 CC the target and probes so that the probe hybridises to form a probe  
 CC /folded target complex. Also provided are methods for determination of  
 CC structure formation in nucleic acid targets; for analysing folded nucleic  
 CC acids targets; and for analysis and characterisation of nucleic acid  
 CC sequences to detect the presence of pathogenic nucleic acid sequences  
 CC indicative of an infection, the presence of variants or alleles of  
 CC mammalian genes associated with disease and cancers, and the  
 CC identification of the source of nucleic acids found in forensic samples,  
 CC as well as in paternity determinations. The methods allow simultaneous  
 CC analysis of both strands (e.g. the sense and antisense strands) and are  
 CC ideal for high-level multiplexing. The products produced are amenable to  
 CC qualitative, quantitative and positional analysis. The methods may be  
 CC performed in solution or in the solid phase (e.g. on a solid support).  
 CC The methods are powerful in that they allow for analysis of longer  
 CC fragments of nucleic acid than current methodologies. The present  
 CC sequence represents a control probe that can hybridise to all HCV  
 CC variants

PT Nucleic acid amplification involving primer extension preamplification,
XX
XX
PT especially for whole genome amplification.
XX
XX
PS Example 6; Page 7; 24pp; German.
XX
XX
XX
This invention describes a novel method for the amplification of nucleic
XX
XX
acid fragments from a sample in two or three thermal cycling reactions
XX
XX
using random primers in the first reaction and specific primers in the
XX
XX
second reaction is new and comprises using a mixture of at least two DNA
XX
XX
polymerases, at least one of which has 3'-5' exonuclease activity. The
XX
XX
process is useful for whole genome amplification by primer extension
XX
XX
preamplification polymerase chain reaction (PEP-PCR). DNA amplified by
XX
XX
the process can be used for mutation analysis, as a template for
XX
XX
sequencing reactions, or for microsatellite analysis. The use of a
XX
XX
mixture of DNA polymerases, including at least one with proofreading
XX
XX
ability, results in increased sensitivity, such that cell-specific
XX
XX
amplification products can be generated with a probability of more than
XX
XX
90% from samples containing no more than 100 cells, preferably no more
XX
XX
than 5-10 cells. AAZ09799-209815 represent PCR primers used in the method
XX

XX Claim 18; Page 440; 1343pp; English.  
XX  
XX The present invention describes a new composition comprising an antisense  
XX oligonucleotide (ON) with low adenosine (up to 15%), which targets  
XX nucleic acids involved in bronchoconstriction, allergies, and/or  
XX inflammation. The ON can have antiinflammatory, antiallergic,  
XX antiasthmatic, cytostatic and analgesic activities. The compositions are  
XX useful for the treatment of diseases associated with inflammation,  
XX impaired airways, including lung disease and diseases whose secondary  
XX effects afflict the lungs of a subject. They can be used for treating  
XX e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,  
XX impaired respiration, respiratory distress syndrome, pain, cystic  
XX fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
XX pulmonary disease (COPD), and cancers such as leukaemia, lymphomas,  
XX carcinomas, and cancers which may metastasise to the lungs, including  
XX breast and prostate cancer. The reduction of the adenosine content of the  
XX ONs reduces side effects. The A-containing ONs break down with the  
XX release of deoxyadenosine which activates adenosine receptors causing  
XX bronchoconstriction and inflammation. AAA32313 to AAA3512 represent the  
XX nucleotide sequences given in the sequence listing from the present  
XX invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185

XX Detection of drug-selected mutations in the HIV protease gene used to  
PT treat HIV infections.

PS Claim 3; Page 43; 76pp; English.

XX The present invention describes the detection of drug-selected mutations  
CC in the HIV protease gene. The method of detection allows the simultaneous  
CC characterisation of a range of codons involved in drug resistance using  
CC sets of probes optimised to function together in a reverse-hybridisation  
CC assay. AAZ97517 to AAZ97997 represent specifically claimed probes for use  
CC in the assay, and AAZ97479 to AAZ97501 represent specifically claimed HIV  
CC protease gene polymorphic nucleotide sequences. AAZ97502 to AAZ97515, and  
CC AAZ98004 to AAZ98007, represent PCR primers for the HIV protease gene.  
CC and AAZ97516 represents an HIV protease probe used in an example from the  
CC present invention. The method, probes and primers can be used for the  
CC detection of drug-selected mutations in the HIV protease gene. The method  
CC allows the simultaneous characterisation of a range of codons involved in  
CC drug resistance. The method may also be used for HIV protease genotyping  
CC assays. The probes are able to discriminate between wild type and mutated  
CC protease sequences. The method allows rapid and reliable detection of  
CC drug-selected mutation in HIV. (Updated on 15-SEP-2003 to standardise OS  
CC field)

 XX Low adenosine (A) content antisense oligonucleotides which do not trigger  
 PT adenosine receptors during metabolism, useful e.g. for treating cancers  
 PT and respiratory obstructions.  
 XX  
 XX Claim 14; Page 256; 1592pp; English.

XX The present invention describes low adenosine (A) content antisense  
 CC oligonucleotides and compositions (I) comprising them. In the antisense  
 CC oligonucleotides the A is replaced by a 'Universal' or alternative base.  
 CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,  
 CC immunosuppressive, antiasthmatic, hypotensive and cyostatic activities.  
 CC The antisense oligonucleotides and (I) can be used to down-regulate the  
 CC expression and or activity of target polypeptides associated with  
 CC lung/respiratory disorders and malignancies, such as stimulating and  
 CC activating peptide factors and transmitters, transcription factors,  
 CC immunoglobulins and antibodies, antibody receptors, cytokines and  
 CC chemokines, endogenously produced specific and non-specific enzymes,  
 CC binding proteins, adhesion molecules and their receptors, cytokine and  
 CC chemokine receptors, adenosine receptors, bradykinin receptors, central  
 CC nervous system (CNS) and peripheral nervous and non-nervous system  
 CC receptors, CNS and peripheral nervous and non-nervous system peptide  
 CC transmitters, defensins, growth factors, vasoactive peptides and  
 CC receptors, binding proteins and malignancy associated proteins. The  
 CC antisense oligonucleotides may be used in this way to treat disorders  
 CC including respiratory obstruction (especially pulmonary obstruction  
 CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or  
 CC surfactant hypoproduction which are associated with a disease or  
 CC condition selected from pulmonary vasoconstriction, inflammation,  
 CC allergies, asthma, impeded respiration, respiratory distress syndrome

CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary  
 CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),  
 CC pulmonary transplantation rejection, pulmonary infections, bronchitis,

 XX  
 CC The present invention relates to the use of enzymatic nucleic acid  
 CC molecules (e.g. ribozymes) to modulate gene expression. The invention  
 CC also methods for their use to down regulate or inhibit the expression of  
 CC genes encoding protein-tyrosine-phosphatase-1b (PTP-1B), methionine  
 CC aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C  
 CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor  
 CC receptor-2 (HER2/c-erbB2/neu), phospholamban (PLN), presentin-1 (ps-1),  
 CC presentin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic  
 CC nucleic acid molecules used to inhibit the expression of the said genes  
 CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,

zinczyme, and/or DNAzyme motifs. The methods of the invention are useful  
for treating cancer, in particular breast cancer; Alzheimer's disease,  
diabetes, obesity, cardiac diseases e.g. heart disease, age-related  
diseases, hepatitis B infections, and hepatitis and hepatocellular  
carcinoma. The enzymatic nucleic acid molecules can also be used as  
diagnostic tools to examine genetic drift and mutations within diseased  
cells and to detect the presence of specific RNA in a cell. The present  
invention represents a substrate/target sequence for a ribozyme used in  
the examples of the present invention. Note: Some SEQ ID Nos are repeated  
more than once in the specification, but these have different sequences  
associated with them.

XX  
XX The present invention describes a method for identifying oligonucleotides  
CC with desired hybridisation properties to nucleic acid targets containing  
CC secondary structure. The method comprises amplifying a target nucleic  
CC acid having at least one accessible and one inaccessible site. Primers  
CC that form an extension product are identified as the oligonucleotides  
CC which can interact with the folded target nucleic acid. Oligonucleotides  
CC from the present invention can be used in novel detection methods for  
CC clinical diagnostic purposes, including the detection and identification  
CC of pathogenic organisms (e.g. HIV). The method allows the ability to  
CC rapidly analyse nucleic acid structures. ABL46034 to ABH46367 represent  
CC sequences used in the exemplification of the present invention

CC (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3  
CC (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic  
CC receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.  
CC The polymorphisms in the human genes cited in the invention are useful as  
CC genetic linkage markers for locating and characterizing the genes that  
CC are responsible for specific traits within the genome and eventually  
CC identifying the genes responsible for a variety of disorder-related  
CC traits as a result of their e.g., overexpression, constitutive  
CC expression, mutation or underexpression, which may be used in diagnosing  
CC and/or treating the disorders. The nucleic acid molecules comprising the  
CC polymorphic sequences contained in CYP4501A1, CYP4501A2, CYP4502E1,  
CC ARNT, EPHX2, GST12, NMNT, NQO2, NR112, STM, UGT2B4, UGT2B7, UGT2B15, AHR,  
CC MDR1 and/or MDR3 are useful for screening individuals for altered drug  
CC metabolism. The polymorphic sequences contained in CYP4501A1, CYP4501A2,  
CC AHR, MDR1 and/or MDR3 may also be used to screen individuals for  
CC susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are  
CC used to screen for altered cardiovascular function, in COX2 for altered  
CC susceptibility to colorectal tumours, in DBI or CHMR1 for altered central  
CC nervous system function, in FLAP and HNMT for altered pulmonary,  
CC immunological or haematological function, in KLK2 for altered serine  
CC protease activity in the prostate, in LTF for altered immunological or  
CC haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and  
CC peripheral nervous system function. The present sequence represents a  
CC sequencing primer used to sequence the polymorphic genes of the invention

XX

CC The invention relates to a typing kit for judging human leukocyte antigen  
CC (HLA) genotype of a sample by hybridising a substrate on which 10-24 base  
CC oligonucleotides (ABL30512-ABL31809) originating in the sequences of  
CC genes e.g. belonging to HLA class I antigens on human genome and  
CC containing gene polymorphisms as alloantigens have been immobilised as  
CC primers for amplification of cleaved nucleic acids relating to gene  
CC polymorphisms. The method is useful for judging HLA genotypes of  
CC individuals by determining immunogenetic differences before transplanting  
CC between them, providing genetic information to decide compatibility of  
CC organ and tissue for transplantation e.g. of bone marrow, kidney, liver,  
CC pancreas, Langerhans islet in pancreas and cornea, susceptibility  
CC diagnosis of genetic diseases and identifying individuals

XX  
PS Claim 1; Page 41; 0pp; English.  
XX  
XX The present invention relates to compounds capable of modulating hypoxia-  
CC inducible factor-1alpha (HIF1a). The compounds are used to treat patients  
CC with, or at risk of developing, cancer (e.g. of breast, prostate,  
CC pancreas, lung), pre-eclampsia, inflammatory bowel disease or Alzheimer's  
CC disease, for modulating angiogenesis, proliferation of erythrocytes and  
CC other cells, iron, glucose and energy metabolism, pH regulation, tissue  
CC invasion, apoptosis, multiple drug resistance, cellular stress responses,  
CC and matrix metabolism, especially apoptosis where modulation is  
CC sensitivity to an apoptotic stimulus, particularly a chemotherapeutic  
CC agent and for inhibiting proliferation of cells (especially cancer cells)  
CC in vitro. The present sequence is an antisense oligonucleotide against  
CC HIF1alpha identified in the exemplification of the invention

XX  
XX Claim 15; SEQ ID NO 10823; 763pp; English.  
PS  
XX  
XX This invention describes a novel composition (a) a first active agent,  
CC comprising oligonucleotides, effective for alleviating  
CC bronchoconstriction, respiratory tract inflammation, allergies and  
CC bronchoconstriction, respiratory tract inflammation, (A) or (A) receptors,  
CC reducing adenosine sensitivity, levels of adenosine. The  
CC surfactant depletion or hyposecretion, when administered to a mammal. The  
CC oligonucleotides are derived from a gene encoding or regulating  
CC expression of a target polypeptide associated with lung airway or lung  
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
CC The invention also describes a kit, that comprises: (a) a delivery  
CC device, in separate containers, (b) the oligonucleotides, (c)  
CC instructions for adding a carrier and for use of the kit. The composition  
CC of the invention has antiallergic, antiinflammatory, antistatic,  
CC analgesic, hypotensive, immunosuppressive and cyostatic activity, is a  
CC beta-adrenergic agonist. The composition is useful for preventing or  
CC treating a respiratory, lung or malignant disease. The administered  
CC composition comprises oligo and is administered to reduce the production  
CC or availability, or to increase the degradation of the target mRNA or to  
CC reduce the amount of target polypeptide present in the lungs. The  
CC pulmonary obstruction, and/or bronchoconstriction and/or lung  
CC inflammation, allergies and/or surfactant hypoproduction and/or lung  
CC inflammation, condition such as pulmonary vasoconstriction,  
CC with a disease or condition such as pulmonary vasoconstriction,  
CC inflammation, allergies, asthma, impeded respiration, respiratory  
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
CC hypertransformation, emphysema, chronic obstructive pulmonary disease, pulmonary  
CC transplantation rejection, pulmonary infections, bronchitis or cancer.  
CC The reduced adenosine content of the anti-sense oligos corresponding to  
CC thymidine present in the target RNA serves to prevent the breakdown of  
CC the oligonucleotides into products that free adenosine into the system  
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
CC prevent any unwanted effects due to it

PT oligonucleotide containing less percentage of adenosine, targeted to  
PT nucleic acids associated with lung airway or lung dysfunction, and  
PT bronchodilating agent.  
XX  
XX Claim 15; SEQ ID NO 10777; 763bp; English.  
PS  
XX This invention describes a novel composition (a) a first active agent,  
CC comprising oligonucleotides, effective for alleviating  
CC bronchoconstriction, respiratory tract inflammation, allergies and  
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,  
CC surfactant depletion or hyposecretion, when administered to a mammal. The  
CC oligonucleotides are derived from a gene encoding or regulating  
CC expression of a target polypeptide associated with lung airway or lung  
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
CC The invention also describes a kit, that comprises: (a) a delivery  
CC device, in separate containers, (b) the oligonucleotides, (c)  
CC instructions for adding a carrier and for use of the kit. The composition  
CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,  
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a  
CC beta-adrenergic agonist. The composition is useful for preventing or  
CC treating a respiratory, lung or malignant disease. The administered  
CC composition comprises oligo and is administered to reduce the production  
CC or availability, or to increase the degradation of the target mRNA or to  
CC reduce the amount of target polypeptide present in the lungs. The  
CC pulmonary obstruction, and/or bronchoconstriction and/or lung  
CC inflammation, allergies and/or surfactant hypoproduction are associated  
CC with a disease or condition such as pulmonary vasoconstriction,

CC inflammation, allergies, asthma, impeded respiration, respiratory  
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary  
CC transplantation rejection, pulmonary infections, bronchitis or cancer.  
CC The reduced adenosine content of the anti-sense oligos corresponding to  
CC thymidines present in the target RNA serves to prevent the breakdown of  
CC the oligonucleotides into products that free adenosine into the system  
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
CC prevent any unwanted effects due to it

XX disorder, useful for treating or differentiating breast cell

PT proliferative disorders comprises analyzing methylation pattern of a

PT genomic DNA from the subject.

XX Disclosure; SEQ ID NO 1910; 104pp; English.

PS The invention relates to a novel method for predicting the responsiveness

CC of a subject with a cell proliferative disorder of the breast tissues to

CC a therapy comprising analysing the methylation pattern of a target

CC nucleic acid by contacting at least one of the target nucleic acids in a

CC biological sample obtained from the subject prior to or during treatment.

CC The method of the invention has cyrostatic activity, and may have a use

CC in gene therapy. The set of oligonucleotides comprising at least two of

CC and/or single nucleotide polymorphisms (SNPs) within the sequences. The

CC methods, nucleic acid, oligonucleotide, and kit are useful for the

CC treatment, characterisation, classification and/or differentiation, of

CC breast cell proliferative disorders. The method is also useful for

CC predicting the responsiveness of a subject with a cell proliferative

CC disorder of the breast tissues to a therapy. The present sequence is used

CC in the exemplification of the invention.

PT Novel isolated nucleic acid molecule, useful for identifying individual who has altered risk for developing cardiovascular disorder or altered likelihood of responding to statin treatment.  
PT  
PS Claim 21; SEQ ID NO 85290; 200pp; English.  
XX

CC The invention relates to an isolated nucleic acid molecule comprising 8 CC  
CC or more contiguous nucleotides, where one of the nucleotides is a single CC  
CC nucleotide polymorphism (SNP). The invention also relates to a method of CC  
CC identifying an individual who has an altered risk for developing a CC  
CC cardiovascular disease or an altered likelihood of responding to statin CC  
CC treatment, involving detecting a SNP in the individual's nucleic acids, CC  
CC where the presence of the SNP is correlated with an altered risk for CC  
CC developing a cardiovascular disease or responding to statin treatment, CC  
CC and a method of treating a cardiovascular disease in an individual CC  
CC involving administering to the individual an effective amount of statin CC  
CC based on the individual's likelihood of responding to statin treatment as CC  
CC predicted by the alleles present at one or more SNP sites. The nucleic CC  
CC acids and the related polypeptides are useful for identifying an agent CC  
CC useful for therapeutically or prophylactically treating cardiovascular CC  
CC diseases which involves contacting a nucleic acid with a candidate agent CC  
CC under conditions suitable to allow formation of a binding complex between CC  
CC the nucleic acid and the candidate agent and detecting formation of the CC  
CC binding complex, where the presence of the complex identifies the agent. CC  
CC The cardiovascular disease is an acute coronary event chosen from CC  
CC myocardial infarction, stroke, atherosclerosis, cerebrovascular disease, CC  
CC unstable angina, coronary artery disease, congenital heart defect and CC  
CC congestive heart failure. This sequence represents a PCR primer used in CC  
CC genotyping of nucleic acid molecules of the invention.

XX  
XX New polynucleotide containing polymorphisms in the human sodium channel  
XX voltage gated type 2 beta polypeptide (SCN2B) gene, for developing drugs  
XX for treating demyelinating diseases.  
XX  
XX Claim 15; Page 13; 63pp; English.

XX This invention relates to an isolated polynucleotide which is a  
CC polymorphic variant of a reference sequence for sodium channel voltage  
CC gated type 2 beta polypeptide (SCN2B) gene. The methods have  
CC applicability in developing diagnostic tests and therapeutic treatments  
CC for demyelinating diseases. The protein is useful for studying the  
CC expression and function of SCN2B and expressing SCN2B protein for use in  
CC screening for candidate drugs to treat diseases related to SCN2B  
CC activity. The polymorphism and haplotype data are useful for validating  
CC whether SCN2B is a suitable target for drugs to treat demyelinating  
CC diseases, screening for such drugs and reducing bias in clinical trials.  
CC The haplotyping method is useful to validate SCN2B as a candidate target  
CC for treating a specific condition or disease predicted to be associated  
CC with SCN2B activity. A recombinant non-human organism transformed or  
CC transfected with the polypeptide is useful for studying expression of the  
CC SCN2B isogenes in vivo, for in vivo screening and testing of drugs  
CC against SCN2B protein and for testing the efficacy of therapeutic agents  
CC and compounds for demyelinating diseases in a biological system. This  
CC sequence is used during the detection of polymorphisms of the SCN2B gene

XX PT New genetic variants of human cytotoxic T-lymphocyte-associated protein  
XX 4, CTLA4 gene for studying expression, function of the gene and  
XX PT expressing CTLA4 protein useful in identifying drugs to treat autoimmune  
XX disorder.

XX PS Claim 17; Page 12; 62pp; English.

XX CC The invention relates to single nucleotide polymorphisms in the gene  
XX encoding the human cytotoxic T-lymphocyte-associated protein 4 or CTLA4  
XX protein. A method for haplotyping the CTLA4 gene in an individual  
XX comprises identifying the nucleotide at one or more polymorphic sites and

CC determining whether one of the copies of the gene is defined by one of  
CC the CTLA4 haplotypes given in the specification or whether both copies  
CC are defined by a haplotype pair. This method is useful in genotyping,  
CC whereby all possible haplotype pairs can be assigned to specific  
CC genotypes. An association between a trait and a haplotype or haplotype  
CC pair of the CTLA4 gene can be identified by comparing the frequency of  
CC the haplotype or haplotype pair in a population exhibiting the trait with  
CC the frequency of the haplotype or haplotype pair in a reference  
CC population, where a higher haplotype frequency in the trait population  
CC indicates the trait is associated with the haplotype or haplotype pair.  
CC CTLA4 and its corresponding DNA are used for studying the expression and  
CC function of CTLA4, for use in screening for candidate drugs to treat  
CC diseases related to CTLA4 activity, such as autoimmune disorders. The  
CC sequences are also useful for studying the effect of variation on the  
CC biological activity of CTLA4 as well as on the binding affinity of  
CC candidate drugs targeting CTLA4. Sequences ABK27518-ABK27549 represent  
CC allele-specific oligonucleotide probes, sequencing primers and PCR  
CC primers used to detect CTLA4 gene polymorphisms

XX PT New genetic variants of Small Inducible Cytokine Subfamily A (Cys-Cys),  
XX Member 8 (Monocyte Chemotactic protein) isogenes, useful for improving  
XX efficiency and reliability in drug development for treating diseases.

XX PS Claim 16; Page 13; 84pp; English.

XX CC The present invention relates to novel single nucleotide polymorphisms  
XX (SNPs) in the human small inducible cytokine subfamily A (Cys-Cys),  
XX member 8 (monocyte chemotactic protein) (SCY8) gene located on  
XX chromosome 17, and methods for haplotyping and/or genotyping the SCY8  
XX gene. The methods of the invention make use of allele-specific  
XX oligonucleotides (ASOs) as probes and primers and/or primer-extension

CC oligonucleotides for detecting the SCY8 gene polymorphisms. The  
CC polynucleotides and screened compounds are useful for the treatment of  
CC diseases associated with SCY8A activity, such as inflammatory diseases  
CC and human immunodeficiency virus (HIV) infection. ABK70720-ABK70743  
CC represent ASO primers for detecting human SCY8A gene polymorphisms

PT expression and function of chemokine receptor 4 and for treating human  
PT immunodeficiency virus-1.  
XX  
XX Disclosure; Page 13; 54pp; English.  
PS  
XX The invention relates to an isolated chemokine receptor 4 (CXCR4)  
CC polynucleotide which is useful for studying expression and function of  
CC chemokine receptor 4 and for the treatment of viruses, including HIV-1.  
CC Methods associated with chemokine receptor 4 are useful for improving the  
CC efficacy and reliability of several steps in the discovery and  
CC development of drugs for treating diseases associated with CXCR4  
CC activity, e.g., human immunodeficiency virus-1 infection. They can  
CC validate CXCR4 as a candidate agent for treating a specific condition or  
CC disease predicted to be associated with CXCR4 activity, and in the design  
CC of clinical trials of candidate drugs for treating a specific condition  
CC or disease predicted to be associated with CXCR4 activity. CXCR4  
CC polynucleotides are useful for therapeutic purposes such as to treat HIV-  
CC 1 infection and also are useful for studying expression of the CXCR4  
CC isogenes in vivo. This sequence represents a ASO primer used to detect  
CC CXCR4 gene polymorphisms

XX  
XX The core region of human NK1R 5' was isolated by PCR and sequenced (see  
CC AAQ30774-Q30778). The antisense primers hsp35a5, hsp35a1, hsp35a2,  
CC hsp36a1 and hsp36a2 (AAQ30784-Q30788) were synthesised based on the human  
CC core sequence. Human glioblastoma mRNA and each of these primers were  
CC used in first strand cDNA synthesis to produce the template for a primary  
CC PCR amplification. Primer hsp35a5 was used with 2 rat sense primers hsp31  
CC and hsp31h (AAQ30779 and AAQ30780) for the primary amplification. The PCR  
CC product was then used as template for secondary PCR with the same rat  
CC primers and the human antisense primer hsp35a4 (AAQ30783). The secondary  
CC PCR product was the template for tertiary PCR amplification, again using  
CC the same rat sense primers but with human antisense primer hsp31a1  
CC (AAQ30782). The amplified DNA fragment hybridised to hsp35a2 (AAQ30781),  
CC indicating it is not a non-specific by-product. The DNA was sequenced and  
CC found to encode the human NK1R 5' N-terminal region and also contains a  
CC 5' UTR. (Updated on 25-MAR-2003 to correct PN field.)

XX The sequences given in AAQ29670-82, AAQ29783 and AAQ29746-48 are primers  
XX CC which were used in the isolation of fragments of the human neurokinin-1  
XX CC receptor (NK1R) cDNA. Human NK1R is a membrane receptor for the  
XX CC neurotransmitter substance P. The primers were designed using regions of  
XX CC the human NK1R cDNA and also regions of the rat NK1R which were thought  
XX CC to be similar to human regions. Part of the human cDNA sequence was  
XX CC derived by amplification using these primers. The remaining part of human  
XX CC NK1R cDNA was obtained from a human cDNA library utilising portions of  
XX CC PCR generated fragments as probes. See also AAQ29749. (Updated on 25-MAR-  
XX CC 2003 to correct PN field.)

XX Treating pathological condition involving neurokinin receptor-1, e.g.  
PT pain or inflammation, by administering oligonucleotide or a non-  
PT nucleotide disruptor compound which modulate NK-1 receptor biosynthetic  
PT pathway.  
XX  
XX Example 18; Page 65; 100pp; English.  
XX  
XX The invention relates to a method of treating a pathological condition  
XX CC characterised partially by involvement of neurokinin receptor-1 (NK-1)  
XX CC receptor, especially treating, attenuating or preventing pain or  
XX CC inflammatory condition. The method comprises administering to a mammal, a  
XX CC compound chosen from an oligonucleotide, its analogue, and a disruptor  
XX CC which interferes with function or production of NK-1 receptors. The  
XX CC method is useful for treating a pathological condition characterised by  
XX CC involvement of NK-1 receptor such as dermatological, immune, autoimmune,  
XX CC cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,  
XX CC psychiatric and central nervous system disorders (e.g. anxiety,  
XX CC psychosis, schizophrenia), gut inflammation, arthritis, and central or  
XX CC peripheral aspects of chronic or acute pain, and for treating,  
XX CC attenuating or preventing pain or inflammation such as peripheral,  
XX CC chronic, acute pain or inflammation, neuropathic pain, inflammation or  
XX CC pain relating to psychiatric disorders and central nervous system  
XX CC disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia  
XX CC in a mammal, in particular human. NK-1 receptor related disorders,  
XX CC diseases, or pathological conditions treatable by this method include  
XX CC respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic  
XX CC conditions (e.g. conjunctivitis), cutaneous/dermatological conditions  
XX CC (allergic dermatitis), intestinal conditions (stroke), chronic  
XX CC Crohn's disease), cardiovascular conditions (stroke), chronic  
XX CC gastrointestinal tract inflammation, and inflammatory diseases such as  
XX CC inflammatory bowel diseases. Other disorders and diseases include  
XX CC cardiovascular pathologies including stroke, chronic inflammatory  
XX CC diseases such as rheumatoid arthritis, demyelinating diseases such as  
XX CC multiple sclerosis, small cell lung cancer, depression, hypersensitivity  
XX CC disorders such as allergies and poison ivy, vasospastic diseases such as  
XX CC angina, addiction disorders such as alcoholism, neurodegenerative  
XX CC disorders such as acquired immune deficiency syndrome (AIDS) related  
XX CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological  
XX CC disorders such as peripheral neuropathy, oedema, stress related and  
XX CC somatic disorders, and osteoarthritis. Antisense oligonucleotides  
XX CC effectively treat chronic conditions and other pathological states  
XX CC without the co-administration of substance P, and reduce the number of  
XX CC activated receptors while not reducing the number of quiescent NK-1  
XX CC receptors. Receptors not chronically stimulated are less affected,  
XX CC reducing side effects of treatment. ABK63834-ABK63906 represent NK-1  
XX CC receptor coding sequences and oligonucleotides of the invention

Identifying genetic profile associated with a neurological, psychiatric,  
or psychological condition, comprises screening individuals for a  
polymorphism in a genetic locus comprising the dopamine receptor D2  
(DRD2) gene.  
Claim 31; SEQ ID NO 1323; 634bp; English.

The invention relates to a method of identifying a genetic profile associated with a neurological, psychiatric or psychological condition, phenotype or state including a sub-threshold neurological, psychiatric or psychological condition, phenotype or state in an individual, comprising screening individuals for a polymorphism in a genetic locus comprising the dopamine receptor D2 (DRD2) gene. The invention also relates to a genetic mutation providing a genetic marker for a neurological, psychiatric, or psychological condition, state or phenotype in an individual, where the presence of a 957C polymorphism is indicative of a predisposition to developing a neurological, psychiatric or psychological condition, phenotype or state. The compositions and methods are useful for identifying a genetic profile associated with a neurological, psychiatric or psychological condition. The method enables clinicians to make a genetic-based diagnosis and can thereby implement treatment or preventative or symptom-ameliorating protocols to reduce the adverse consequences of the condition. This sequence represents a human dopamine receptor D2 (DRD2) DNA oligonucleotide used in the scope of the invention.

PT Delivering gene to muscle cell or tissue - using recombinant adeno-  
PT associated virus encoding therapeutic gene, e.g for acid alpha-  
PT glucosidase for treating glycogen storage disease type II.  
XX

PS Disclosure; Page 35; 76pp; English.  
XX  
XX The invention relates to production of a composition for delivering a  
CC gene (I) to muscle cell or tissue and involves mixing (a) recombinant  
CC adeno-associated virus (AAV) virion consisting of an AAV vector including  
CC (i) linked to suitable control elements and (b) a vehicle. (I) is  
CC delivered to skeletal muscle (myoblasts or myocytes), smooth muscle or  
CC cardiac muscle (cardiomyocytes). It is under control of a muscle-specific  
CC or inducible promoter, e.g. the promoter of the myod gene or steroid-  
CC responsive elements. The virions are used to express therapeutic proteins  
CC in muscle, specifically acid alpha-glucosidase in cardiomyocytes (for  
CC treating type II glycogen storage disease (Pompe's disease), an inherited  
CC cardiomyopathy caused by deficiency of acid alpha-glucosidase), but also  
CC erythropoietin and more generally any protein capable of treating  
CC endocrine, metabolic, haematological and cardiovascular diseases,  
CC including e.g. AIDS, cancer and diabetes, including delivery of antigens  
CC for immunisation. The virions are injected directly into muscle or they  
CC are used to transduce cells in vitro for subsequent return to the  
CC patient. The present sequence represents an oligonucleotide used in the  
CC construction of a vector p1909adhla2

PT vasoconstriction, inflammation, allergies, asthma, hypertension,  
PT bronchitis, emphysema, respiratory distress syndrome, ischemia or  
PT cancers.  
XX  
XX  
PS Claim 18; Page 453; 1343pp; English.  
XX  
XX The present invention describes a new composition comprising an antisense  
CC oligonucleotide (ON) with low adenosine (up to 15%), which targets  
CC nucleic acids involved in bronchoconstriction, allergies, and/or  
CC inflammation. The ON can have antiinflammatory, antiallergic,  
CC antiasthmatic, cyostatic and analgesic activities. The compositions are  
CC useful for the treatment of diseases associated with inflammation,  
CC impaired airways, including lung disease and diseases whose secondary  
CC effects afflict the lungs of a subject. They can be used for treating  
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,  
CC impaired respiration, respiratory distress syndrome, pain, cystic  
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
CC pulmonary disease (COPD), and cancers such as leukemias, lymphomas,  
CC carcinoma, and cancers which may metastasize to the lungs, including  
CC breast and prostate cancer. The reduction of the adenosine content of the  
CC ONs reduces side effects. The A-containing ONs break down with the  
CC release of deoxyadenosine which activates adenosine receptors causing  
CC bronchoconstriction and inflammation. AAA33213 to AAA3312 represent the  
CC nucleotide sequences given in the sequence listing from the present  
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last 1859

CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA2323 to AAA33992) are specifically claimed ONS from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence listing

PT Novel ribozymes for the treatment of diseases and conditions related to

XX hepatitis C infection.

PS Claim 2; Page 96; 123pp; English.

CC The present sequence represents the preferred target sequence of an

CC enzymatic nucleic acid, especially a hairpin ribozyme, which cleaves the

CC Hepatitis C virus (HCV) RNA sequence at the base position given in the

CC descriptor line. The HCV sequence was screened for optimal ribozyme

CC target sites using a computer folding algorithm and regions of the mRNA

CC which did not form secondary folding structures and contained potential

CC ribozyme cleavage sites were identified. Ribozymes were synthesized to

CC target these sites and their activities optimised by either varying the

CC length of the binding arms or by modification to prevent degradation by

CC nucleases. The ribozymes of the invention inhibit gene expression and/or

CC viral replication, and are used to treat diseases associated with

CC Hepatitis C virus (HCV) infection, e.g. cirrhosis, liver failure and

CC hepatocellular carcinoma. The ribozymes may be used in combination with

CC interferon to treat HCV infection, other infectious diseases, autoimmune

CC diseases, and cancer

PT Composition containing immune stimulant and inhibitor of agent that

XX adversely affects the immune response, for treating cancers and

XX infections.

PS Claim 10; Fig 1; 30pp; English.

CC This sequence is an immunosuppressant inhibitor oligonucleotide, which is

CC used in the invention. The invention relates to a composition which

CC contains at least one inhibitor (less than 100 kb) of a substance (e.g.

CC transforming growth factor TGF-beta, vascular endothelial growth factor

CC VEGF, interleukin-10, IL-10, prostaglandin E2 PGE2, or their receptors)

CC that adversely affects the immune response. The composition also includes

CC at least one stimulant that positively affects the immune response. This

CC oligonucleotide is an example of an inhibitor that is used in the

CC composition. The composition is used as an immunostimulant for the

CC treatment of neoplasms and infections, particularly hyperproliferation;

CC leukaemia; (non-)Hodgkin's lymphoma; carcinoma (of oesophagus, bronchi,

CC colon-rectum, stomach, intestine, gall bladder or duct, pancreas, anus,

CC breast, ovary, cervix, endometrium, prostate or bladder), liver tumours,

CC malignant melanoma, brain tumours and sarcomas. The oligonucleotides,

CC most of which are directed against TGFbeta or VEGF, are inhibitors of

CC monocyte chemotactic protein-1 (MCP-1) and are useful as anti-

CC inflammatory factors for treating e.g. asthma, Crohn's disease, ulcerative

CC colitis, diabetes glomerulonephritis, acute respiratory distress

CC syndrome and the formation of atherosclerotic plaque

CC Sequence 14 BP; 0 A; 8 C; 1 G; 5 T; 0 U; 0 Other;

XX Query Match 0.7%; Score 12.4; DB 1; Length 14;

CC surfactant depletion or hyposecretion, when administered to a mammal. The  
CC oligonucleotides are derived from a gene encoding or regulating  
CC expression of a target polypeptide associated with lung airway or lung  
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
CC The invention also describes a kit, that comprises: (a) a delivery  
CC device, in separate containers, (b) the oligonucleotides, (c)  
CC instructions for adding a carrier and for use of the kit. The composition  
CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,  
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a  
CC beta-adrenergic agonist. The composition is useful for preventing or  
CC treating a respiratory, lung or malignant disease. The administered  
CC composition comprises oligo and is administered to reduce the production  
CC or availability, or to increase the degradation of the target mRNA or to  
CC reduce the amount of target polypeptide present in the lungs. The  
CC pulmonary obstruction, and/or bronchoconstriction and/or lung  
CC inflammation, allergies and/or surfactant hypoproduction are associated  
CC with a disease or condition such as pulmonary vasocostriction,  
CC inflammation, allergies, asthma, impeded respiration, respiratory  
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary  
CC transplantation rejection, pulmonary infections, bronchitis or cancer.  
CC The reduced adenosine content of the anti-sense oligos corresponding to  
CC thymidines present in the target RNA serves to prevent the breakdown of  
CC the oligonucleotides into products that free adenosine into the system  
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
CC prevent any unwanted effects due to it

PT Substrate for use in optically detecting target materials, comprises an  
PT oxide layer having thickness that may vary to wavelength of excitation  
PT light used.

PS Example 1; SEQ ID NO 36; 20pp; English.

XX The present invention relates to a novel substrate having an oxide layer.

CC which is useful in optically detecting a target material. The thickness  
CC of the oxide layer may vary to the wavelength of excitation light used.  
CC Also claimed is a method for detecting a target material, comprising  
CC immobilizing a probe material on a substrate, reacting the immobilized  
CC probe material and the target material, illuminating a reaction product  
CC with excitation light, and measuring light emitted from the reaction  
CC product by the excitation light. In an example from the invention,  
CC microarrays were fabricated by forming fused silica (SiO2) layers on  
CC silicon wafers, followed by linkage with a coupling agent and  
CC immobilization of oligonucleotide probes. The microarrays were then  
CC incubated with labeled oligonucleotides and exposed to excitation light,  
CC and light emitted from the target oligonucleotides was measured, to  
CC evaluate the intensity of detected signals with respect to the thickness  
CC of the SiO2 layers. AD285128-AD285203, MODY 3 diabetes-associated probes  
CC used with the target sequence of human glyceraldehyde-3-phosphate  
CC dehydrogenase (GAPDH), were used to show that when a target  
CC oligonucleotide is detected using a microarray including a substrate with  
CC an oxide layer a good signal is obtained compared to that with no oxide  
CC layers.

XX  
XX Enzymatic nucleic acid molecules having a hammer-head motif - used for  
XX the treatment of arthritis, induction of graft tolerance or treatment of  
XX auto-immune diseases.  
XX  
XX Claim 10; Page 204; 307pp; English.  
XX  
XX The present invention describes a novel enzymatic nucleic acid (ENA)  
XX having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues  
XX; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least  
XX ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's  
XX can inhibit collagenase and streptomycin production in the synovial  
XX membrane of joints for the treatment or prevention of arthritis,  
XX particularly osteoarthritis or rheumatoid arthritis. The ENA's can also  
XX be used to treat antigen presenting cells of a donor to induce tolerance  
XX in a recipient to an alloantigen of a donor. They can also be used for  
XX enhancing graft tolerance or for treating autoimmune disease, and for  
XX treating allergies and other inflammatory conditions. The ENA's can also  
XX be used in diagnosis. Ribozyme therapy impacts on the expression of  
XX streptomycin without introducing the non-specific effects upon gene  
XX expression which accompany treatment with retinoids and dexamethasone.  
XX The concentration of ribozyme required to affect a therapeutic treatment  
XX is lower than that required of antisense molecules, and is highly  
XX specific. The present sequence is used in the exemplification of the  
XX present invention

XX Enzymatic nucleic acid molecules having a hammer-head motif - used for  
XX the treatment of arthritis, induction of graft tolerance or treatment of  
XX auto-immune diseases.  
XX  
XX Claim 10; Page 209; 307pp; English.  
XX  
XX The present invention describes a novel enzymatic nucleic acid (ENA)  
XX having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues  
XX; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least  
XX ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's  
XX can inhibit collagenase and streptomycin production in the synovial  
XX membrane of joints for the treatment or prevention of arthritis,  
XX particularly osteoarthritis or rheumatoid arthritis. The ENA's can also  
XX be used to treat antigen presenting cells of a donor to induce tolerance  
XX in a recipient to an alloantigen of a donor. They can also be used for  
XX enhancing graft tolerance or for treating autoimmune disease, and for  
XX treating allergies and other inflammatory conditions. The ENA's can also  
XX be used in diagnosis. Ribozyme therapy impacts on the expression of  
XX streptomycin without introducing the non-specific effects upon gene  
XX expression which accompany treatment with retinoids and dexamethasone.  
XX The concentration of ribozyme required to affect a therapeutic treatment  
XX is lower than that required of antisense molecules, and is highly  
XX specific. The present sequence is used in the exemplification of the  
XX present invention

XX Determining protein function from only partial cDNA sequence - by  
PT assessing change in biological activity on addition of anti-sense  
PT molecule.  
XX Example 2; Page 17; 25pp; English.

CC AAT15252-n15257 represent antisense sequences used in the method of the

CC invention. These sequences are antisense to a partial cDNA sequence (see

CC AAT15251) for a protein with unknown function. The method of the

CC invention is for probing the function of a protein encoded by a cDNA of

CC partially known sequence. The method comprises assessing the change of

CC ratio of intensity of the donor and acceptor fluorescence peaks is  
CC measured to indicate the amount of interaction of the donor and acceptor  
CC labels, which is a measure of the quantity of probes which are hybridised  
CC to the completed RNA molecules. The process provides a highly sensitive  
CC and simple method for monitoring the progress of RNA transcription in  
CC vitro

PT Preparation of antisense oligo:nucleotide(s) which lack long runs of  
PT consecutive guanosine or inosine - and have specific ratio of residues  
PT able to form two or three hydrogen bonds, have greater activity and  
PT reduced toxicity, used therapeutically or to modulate growth of cells in  
PT culture.  
XX  
PS Claim 10; Fig 5a; 286pp; English.  
XX  
AAV48564-708 represent antisense oligonucleotides directed against the  
CC jund and jund genes. Of these, only oligonucleotides AAV48565-614  
CC resulted in effective downregulation of negative growth control by jund  
CC or jund, while AAV48615-708 had little effect. The oligonucleotides  
CC exemplify the invention. The specification describes oligonucleotides  
CC that contain 8-30 nucleotides, which contain at most 8 nucleotides that  
CC can each form three hydrogen bonds to cytosine; do not contain four  
CC consecutive nucleotides able to form three H-bonds each to four  
CC consecutive cytosines; do not contain two sequences of three consecutive  
CC nucleotides each able to form three H-bonds to three consecutive  
CC cytosines, and the ratio between residues able to form two H-bonds each  
CC (2R) or three such bonds (3R) is given by 2R/3R = 0.33-0.72. The  
CC oligonucleotides are used to modulate expression of genes, particularly  
CC the genes for p53, ErbB-2, jund, jund, TGF-beta 1 or beta 2 to control  
CC proliferation of primary cell cultures (e.g. bone marrow stem, liver or  
CC kidney cells, osteoclasts, osteoblasts and/or keratinocytes). The  
CC oligonucleotides can also be used to analyse function of proteins (by  
CC altering their expression or activity) and therapeutically, e.g. in cases

CC of cancer or (targeting TGF) for stimulating the immune system

XX
PS Example 1; Page 13; 25pp; Japanese.
XX
CC This sequence represents a probe for the mRNA encoding the Xenopus laevis
CC elongation factor-1 (XELFI-1 alpha) alpha chain. The invention relates to a
CC method for the determination and screening of the biological activity of
CC a drug, with real-time monitoring of RNA transcription and synthesis
CC without using electrophoresis. The method for the determination and
CC screening of the biological activity of a drug in an RNA transcription
CC and synthesis system, comprises: addition of the test drug to the system
CC to alter the transcription and synthesis of the RNA; and determining the
CC fluorescence of 2 probe sequences capable of hybridising with the base
CC sequence of the transcribed and synthesized RNA, where one probe is a
CC donor probe labelled with an energy donor fluorescent molecule and the
CC other probe is an acceptor probe labelled with an energy acceptor
CC fluorescent molecule. The method is used for the determination and
CC screening of the biological activity of a drug. The method allows for the
CC automatic determination of the biological activity of a drug

PS Claim 8; Page 50; 83pp; Japanese.
XX
CC The present invention describes a method for distinguishing a human
XX leukocyte antigen (HLA) class I antigen or allele by a combination of
XX polymerase chain reaction (PCR) using a primer pair whereby all HLA-A, -B
XX or -C alleles can be amplified or using reverse hybridisation analysis
XX comprising a DNA probe covalently bonded to microtitre plate wells which
XX are hybridisable specifically with the base sequence of at least one
XX specific HLA-A, -B or -C allele. The method is applicable in gene typing,
XX judging donor-recipient compatibility during organ transplant and
XX correlation analysis for diagnosis of various diseases. The method is
XX simple, rapid and accurate, with possibility of mechanisation and
XX automation, without the problems encountered by using the prior-art
XX techniques. AAA66943 to AAA67072 represent oligonucleotide probes and PCR
XX primers for use in the method of the present invention

 XX Ameliorating the effects of a disorder, e.g. psoriasis, by administering  
 PT UV (ultra-violet) treatment (optional) and an antisense nucleic acid that  
 PT inhibits or reduces growth factor mediated cell proliferation and/or  
 PT inflammation.  
 XX  
 PS Example 8; Page 83; 201pp; English.  
 XX  
 CC The present invention relates to a method for ameliorating the effects of  
 CC skin disorders. The method comprises contacting the skin with an  
 CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1  
 CC receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of  
 CC inhibiting or reducing growth factor mediated cell proliferation,  
 CC inflammation and/or other disorders. The present sequence is an  
 CC oligonucleotide which can be used to design the antisense  
 CC oligonucleotides of the present invention (see AAF45151 and AAF45153-  
 CC F45161). The method is useful for ameliorating the effects of psoriasis,  
 CC ichthyosis, pityriasis, rubea, pilaris, seborrhoea, keloids, keratosis,  
 CC neoplasias, scleroderma, warts, benign growths, cancers of the skin, a  
 CC hyperneovascular condition such as a neovascular condition of the retina,  
 CC brain or skin, growth factor-mediated malignancies, other sclerotic  
 CC disease, kidney disease, hyperproliferation of the inside of blood  
 CC vessels or any other hyperplasia

 PT polynucleotides comprising single nucleotide polymorphisms in the human  
 PT dopamine receptor D2, useful for detecting mutations associated with,  
 PT e.g. schizophrenia, Parkinson's and myoclonus dystonia.  
 XX  
 PS Claim 15; Page 24; 135pp; English.  
 XX  
 CC The present invention describes polynucleotides comprising single  
 CC nucleotide polymorphisms (SNPs) in the human dopamine receptor D2 (DRD2).  
 CC The polynucleotides may be used in assays to detect and characterise  
 CC polymorphisms in DRD2 that affect its expression and activity and are  
 CC involved in disorders such as schizophrenia, Parkinson's and myoclonus  
 CC dystonia (MD). This information would be useful for studying the  
 CC biological function of DRD2 as well as in identifying drug targeting  
 CC this protein for the treatment of disorders related to its abnormal  
 CC expression or function. Polymorphisms in the DRD2 gene affect the  
 CC expression of active and functional polypeptides. Therefore it is  
 CC advantageous to detect polymorphisms in the DRD2 gene and how those  
 CC polymorphisms are combined in different copies of the gene. AAF70261 to  
 CC AAF70308 represent human DRD2 allele specific oligonucleotide probes, and  
 CC AAF70309 to AAF70404 represent human DRD2 allele specific oligonucleotide  
 CC primers which are used in the detection of DRD2 polymorphisms. AAF70405  
 CC to AAF70452 represent oligonucleotide primers for the detection of human  
 CC DRD2 polymorphisms which are given in the exemplification of the present  
 CC invention. AAF70453 to AAF70538 represent PCR primers for the human DRD2  
 CC gene which are used in examples from the present invention

 XX  
 XX The present invention relates to the use of enzymatic nucleic acid  
 CC molecules (e.g. ribozymes) to modulate gene expression. The invention of  
 CC also methods for their use to down regulate or inhibit the expression of  
 CC genes encoding protein-tyrosine-phosphatase-1b (PTN-1B), methionine  
 CC aminopeptidase (MeAP-2), human telomerase (hTERT), protein kinase C  
 CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor  
 CC receptor-2 (HER2/c-erbB2/neu), phospholamban (PLN), presenilin-1 (ps-1),  
 CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic  
 CC nucleic acid molecules used to inhibit the expression of the said genes  
 CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,  
 CC zincyme, and/or DNAzyme motifs. The methods of the invention are useful  
 CC for treating cancer, in particular breast cancer, Alzheimer's disease,  
 CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related  
 CC diseases, hepatitis B infections, and hepatitis and hepatocellular  
 CC carcinoma. The enzymatic nucleic acid molecules can also be used as  
 CC diagnostic tools to examine genetic drift and mutations within diseased  
 CC cells and to detect the presence of specific RNA in a cell. The present  
 CC sequence represents a substrate/target sequence for an anti-HER2 NCH  
 CC ribozyme used in the examples of the present invention. Note: Some SEQ ID  
 CC Nos are repeated more than once in the specification, but these have  
 CC different sequences associated with them.

PT	Identifying oligonucleotides hybridizing to nucleic acids containing
PT	secondary structure, useful in clinical diagnosis, comprises identifying
PT	primers that interact with the target to form an extension product under
PT	amplification conditions.
XX	
PS	Claim 48; Fig 79A; 40pp; English.
XX	
CC	The present invention describes a method for identifying oligonucleotides
CC	with desired hybridisation properties to nucleic acid targets containing
CC	secondary structure. The method comprises amplifying a target nucleic
CC	acid having at least one accessible and one inaccessible site. Primers
CC	that form an extension product are identified as the oligonucleotides
CC	which can interact with the folded target nucleic acid. Oligonucleotides
CC	from the present invention can be used in novel detection methods for
CC	clinical diagnostic purposes, including the detection and identification
CC	of pathogenic organisms (e.g., HIV). The method allows the ability to
CC	rapidly analyse nucleic acid structures. ABL46034 to ABL46367 represent
CC	sequences used in the exemplification of the present invention

XX PT Novel enzymatic nucleic acid molecules which down regulates expression of  
XX PT a sequence encoding a subunit of nuclear factor kappa B useful for  
XX PT treating cancer, inflammatory disorders and autoimmune diseases.  
XX PS Claim 3; Page 61; 72pp; English.  
XX CC The invention describes an enzymatic nucleic acid molecule (I) which down  
XX CC regulates expression of a sequence encoding a subunit of nuclear factor

CC kappa B (NFkB), where (I) is an inozyme, zinzyme, G-cleaver or amberyze  
 CC configuration. The enzymatic nucleic acid molecule is adapted to treat  
 CC cancer and is useful for down-regulating RBL-A activity in a cell, for  
 CC treating a patient having a condition associated with the level of RBL-A.  
 CC (I) is useful for cleaving RNA comprising a sequence of RBL-A gene, in  
 CC the presence of a divalent cation, especially Mg<sup>2+</sup>. The enzymatic and  
 CC antisense nucleic acid molecules are useful for treating breast, lung,  
 CC prostate, colorectal, brain, oesophageal, stomach, bladder, pancreatic,  
 CC cervical, head and neck, ovarian cancer, melanoma, lymphoma, glioma or  
 CC multidrug resistant cancer. The method involves use of other drug  
 CC therapies such as monoclonal antibodies, RBL-A-specific inhibitors or  
 CC chemotherapy including paclitaxel, docetaxel, cisplatin, methotrexate,  
 CC cyclophosphamide, doxorubicin, fluorouracil carboplatin, edatrexate,  
 CC gemcitabine or radiation therapy. The enzymatic and antisense nucleic  
 CC acid molecules are also useful for treating inflammatory disease such as  
 CC rheumatoid arthritis, restenosis, asthma, Crohn's disease, diabetes,  
 CC obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft  
 CC rejection, gene therapy applications, ischemia/reperfusion injury  
 CC (central nervous system (CNS) and myocardial), glomerulonephritis,  
 CC sepsis, allergic airway inflammation, inflammatory bowel disease or  
 CC infection. This sequence represents the substrate of a novel enzymatic  
 CC nucleic acid molecule

PT particularly antisense oligonucleotides directed against androgen  
PT receptor or 5alpha reductase.  
XX  
PS Example 1; Page 18; 36pp; German.  
XX  
CC This invention describes a novel method for treatment of acne and  
CC acneform skin disorders, including rosacea, using a non-viral active  
CC agent, prepared by molecular biological methods. The method comprises an  
CC antisense oligonucleotide; (stabilised) ribozyme; (mirror) aptamer;  
CC chimeric RNA/DNA oligonucleotide; naked plasmid DNA or DNA encapsulated  
CC in a liposome, especially an antisense oligonucleotide specific for a  
CC gene that encodes a steroid hormone receptor or steroid hormone  
CC metabolising enzyme, particularly the androgen receptor and/or 5alpha-  
CC reductase. The products of the invention have dermatological and  
CC antiseborrheic activity and can inhibit the androgen-induced stimulation  
CC of sebaceous gland activity. The method of the invention provides  
CC effective treatment with reduced side effects and without the  
CC difficulties associated with systemic administration. This sequence  
CC represents a RT-PCR primer used to amplify the beta-actin gene, which is  
CC used as a control during the amplification of the human androgen receptor  
CC described in the disclosure of the invention

PT Novel enzymatic nucleic acid that down-regulates expression of neurite  
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or  
PT protein kinase PKR genes, for treating cancer and inflammatory disease.  
XX  
PS Claim 59; SEQ ID NO 4406; 317pp; English.  
XX  
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)  
CC that down regulate the expression or inhibit the function of a receptor  
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),  
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the  
CC invention are useful for treating: cerebrovascular accident, central  
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,  
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,  
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune  
CC disease, lupus, multiple sclerosis, transplant/graft rejection,  
CC ischemia/reperfusion injury, glomerulonephritis, sepsis, and allergic  
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The  
CC nucleic acids of the invention are also useful for down-regulating the  
CC expression of a target gene and as a diagnostic tool to examine genetic  
CC drifts and mutations within diseased cells or to detect the presence of a  
CC target RNA in a cell. The present RNA sequence represents a human PKR  
CC substrate sequence.

CC The present invention relates to novel binding agents comprising at least  
CC one peptide capable of binding myostatin and inhibiting its activity. In  
CC one embodiment, the binding agent comprises at least one myostatin-  
CC binding peptide attached directly or indirectly to at least one vehicle  
CC such as a polymer or an Fc domain. Myostatin (also known as  
CC growth/differentiation factor 8, GDF-8) is a transforming growth factor-  
CC beta (TGF-beta) family member known to be involved in regulation of  
CC skeletal muscle mass. The binding agents increase lean muscle mass when  
CC administered to animals and decrease fat to muscle ratios. The binding  
CC agents are useful for treating muscle-wasting disease, e.g. muscular  
CC dystrophy, amyotrophic lateral sclerosis, congestive obstructive  
CC pulmonary disease, chronic heart failure, cancer, AIDS, renal failure,  
CC uremia, rheumatoid arthritis, age-related sarcopenia, muscle-wasting due  
CC to prolonged bedrest, spinal cord injury, stroke, bone fracture, or  
CC aging, and myosin-related metabolic disorder, e.g. diabetes, obesity,  
CC hyperlipaemia, bone loss, or osteoporosis. The present sequence is a  
CC linker peptide coding sequence used to illustrate the invention.

XX PT useful for diagnosing or developing a compound for treating inflammatory

XX PT bowel diseases or related disease e.g., Crohn's disease and ulcerative

XX PT colitis.

XX Example 1; SEQ ID NO 6; 63pp; English.

XX This invention relates to a novel diagnostic composition that comprises  
CC nucleic acid molecules bound to a solid support (or microarray), wherein  
CC each nucleic acid can hybridise to an mRNA of a gene that shows abnormal  
CC expression in an gastrointestinal condition. Specifically, it refers to  
CC DNA oligos useful for preparing a microarray chip for the diagnosis of  
CC inflammatory bowel disease, Crohn's disease, ulcerative colitis or a  
CC disposition thereof. The present invention describes nucleic acid

CC molecules useful for screening methods to identify compounds that can be  
CC used for therapy or to prevent progression of the aforementioned  
CC conditions. As such, the pharmaceutical compositions developed  
CC according exhibit antiinflammatory and antitumor activities. This  
CC oligonucleotide sequence is an RT-PCR primer used to amplify human beta-  
CC actin, an endogenous control gene used in an exemplification of the  
CC invention.

XX Determining whether an individual has a response marker I or II comprises  
XX determining whether the individual has zero copies or at least one copy  
XX of any of the CHRNA2 haplotypes.  
XX Claim 42; SEQ ID NO 13; 52pp; English.  
XX The present invention relates to a method for determining whether an  
XX individual has a response marker I or II. The method involves determining  
XX whether the individual has zero copies or at least one copy of any of the  
XX cholinergic receptor, nicotinic, alpha polypeptide 2 (CHRNA2) haplotypes.  
XX The composition and methods are useful for diagnosing and creating a  
XX cognitive disorder, e.g. mild or moderate dementia of the Alzheimer's  
XX type, or dementia associated with Parkinson's disease. The method of the  
XX invention is also useful for predicting the expected therapeutic response  
XX of an individual to treatment with galantamine and for gene therapy. The  
XX present sequence is the human CHRNA2 gene polymorphic site 2 (P52)  
XX detecting allele-specific oligonucleotide (ASO) primer.

XX Novel bispecific antibody substituting for function of cofactor that

PT enhances enzyme reaction, and recognizing both enzyme and substrates of  
PT enzyme, useful for treating hemophilia A.  
PS Disclosure; SEQ ID NO 245; 69bp; Japanese.  
XX  
CC This invention describes a novel bispecific antibody which can act as a  
CC cofactor to enhance an enzyme reaction and can recognize the enzyme and  
CC the enzyme substrate. The antibody specifically binds to blood  
CC coagulation factor VIII. The invention also describes a composition  
CC comprising the antibody and a carrier, a kit useful in preventing and/or  
CC treating bleeding associated with a disorder or from a disease caused by  
CC bleeding. The composition includes blood coagulation factor VIII. The  
CC antibody of the invention can be a blood-coagulation fibrinolytic related  
CC factor including blood-coagulation factor VIII, blood coagulation factor  
CC X, or blood-coagulation factor IX. The antibody comprises a complementary  
CC determining region (CDR) of anti-blood-coagulation factor IX/Xa factor  
CC antibody. The novel antibody or composition is useful for preventing  
CC and/or treating a disease accompanying bleeding, or the disease resulting  
CC from bleeding, where the disease accompanying bleeding or the disease  
CC resulting from bleeding develops and/or progresses by an active reduction  
CC or deletion of the blood coagulation factor VIII. The disease the  
CC develops and/or progresses by an active reduction or deletion of the  
CC blood coagulation factor VIII and/or activation blood coagulation factor  
CC VIII, is hemophilia A or von Willebrand disease, where the hemophilia is  
CC an acquired hemophilia A. This sequence encodes a fragment of the  
CC antibody described in the method of the invention. Note: The sequence  
CC data for this patent did not form part of the printed specification, but  
CC was obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX Variable region gene of high neutralization activity monoclonal antibody  
PT of tumor necrosis factor and its preparation.  
PS Claim 1; Page 3; 20pp; Chinese.  
XX  
XX The invention relates to a method for preparing variable region genes of  
CC high neutralization activity tumor necrosis factor (TNF) resistant  
CC monoclonal antibody (D2 mAb). The method comprises using recombinant  
CC human TNF immune BALB/c mouse to prepare a plurality of mouse anti-TNF  
CC monoclonal antibody, carrying out an extracorporeal blocking-up  
CC experiment to screen anti-TNF monoclonal antibody with high  
CC neutralization activity. By cloning the monoclonal antibody light chain  
CC and heavy chain variable region (VL and VH respectively) genes, the  
CC monoclonal antibody light chain and heavy chain variable region gene  
CC sequence and amino acid sequence can be obtained, and the utility of the  
CC gene sequence and protein sequence can be confirmed. This sequence  
CC represents DNA encoding the complementarity determining region, CDR1 of  
CC D2VH.

PT Modulating production of amyloidogenic peptide in, e.g. Alzheimer's  
PT disease, by contacting cell and Nogo polypeptide with Nogo antagonist.  
XX  
XX  
PS Disclosure; SEQ ID NO 22; 53pp; English.  
XX  
CC The invention describes a method of modulating production of an  
CC amyloidogenic peptide comprising contacting a cell which is expressing  
CC the precursor from which the amyloidogenic peptide is derived and a Nogo  
CC polypeptide, with a Nogo antagonist. Also described are: use of a Nogo  
CC antagonist in the manufacture of a medicament for the treatment or  
CC prophylaxis of a disease involving amyloidosis; and a method of treatment  
CC or prophylaxis of Alzheimer's disease comprising administering to the  
CC human in need an anti-Nogo antibody. The invention is used for modulating  
CC production of amyloidogenic peptide in, e.g. Alzheimer's disease, stroke,  
CC traumatic brain injury and spinal cord injury, fronto-temporal dementias,  
CC peripheral neuropathy, Parkinson's disease, Huntington's disease,  
CC Creutzfeldt-Jakob disease, amyotrophic lateral sclerosis, multiple  
CC sclerosis, or inclusion body myositis. The invention provides an  
CC unexpected route for therapeutic intervention in particularly Alzheimer's  
CC disease. This sequence encodes anti-Nogo-antibody 2A10/3 heavy chain  
CC complementarily determining region (CDR) 1.

XX  
XX  
PS Disclosure; SEQ ID NO 22; 143pp; English.  
XX  
XX  
CC The invention describes an antibody (A1) or its functional fragment, that  
CC binds with and neutralizes human neurite outgrowth (NOCO). Also described  
CC are: providing a first vector encoding a heavy chain of the antibody;  
CC providing a second vector encoding a light chain of the antibody; co-  
CC transfecting a mammalian host cell with the first and second vectors;  
CC culturing the host cell in culture media (preferably serum free) under  
CC conditions permissive to the secretion of the antibody from the host cell  
CC into the culture media; recovering (and optionally purifying) the  
CC secreted antibody; and promoting axonal sprouting involving contacting a  
CC human axon with an anti-NOCO antibody. The antibody is useful in the  
CC preparation of a medicament for treating or prophylaxis of stroke and  
CC other neurological diseases/disorders (e.g. traumatic brain injury, spinal  
CC cord injury, Alzheimer's disease, frontotemporal dementias (taupathies),  
CC peripheral neuropathy, Parkinson's disease, Huntington's disease and  
CC multiple sclerosis); Creutzfeldt-Jakob disease (CJD), Schizophrenia,  
CC amyotrophic lateral sclerosis (ALS), inclusion body myositis. The  
CC antibody inhibits neurodegeneration and/or promotes functional recovery  
CC in a human patient suffering, or at risk of developing, stroke or other  
CC neurological diseases/disorder. This sequence encodes an antibody 2A10  
CC heavy chain complementarily region (CDR) that can be used in the creation  
CC of anti-NOCO-antibody of the invention.

TITLE Gene-specific universal mammalian sequence-tagged sites:  
application to the canine genome  
JOURNAL Unpublished (1996)  
COMMENT Original source text: Canis familiaris DNA.  
Gene-specific universal mammalian sequence-tagged site for ADRB2.  
Primer for the 3' end is in exon 1. Human product is 360 bp. Canine  
product is 360 bp. PCR conditions: 1 min, 94 C, 2 min, 57 C, 3 min,  
94 C, 35 cycles.

Balzergue, S.

Direct Submission

Submitted (23-OCT-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Evry cedex, FRANCE

PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at <http://dbgap.versailles.inra.fr/publiclines/>. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (<http://www.genoplante.com> and <http://genoplante-info.infobiogen.fr/>).

COMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana

```

plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at <http://dbsgap.versailles.inra.fr/publiclines/>. This sequence has been generated in the framework of the French plant genomics program "Genoplante" (<http://www.genoplante.com> and <http://genoplante-info.infobiogen.fr>).

Vector pBluescript II KS(+).R. Site1:EcoRI.R. Site2:NotI.5'. Seg  
Primer T7 Strain Lohman Brown layer/Ross 308 broiler cross This  
normalized library was constructed from 1 million independent  
clones. cDNA synthesis was initiated using an oligo(dT) primer,  
using methylated C in the first strand synthesis reaction.  
Following this first strand reaction, double-stranded cDNA was  
blunted, ligated to NotI adapters, digested with EcoRI,  
size-selected, and cloned into the NotI and EcoRI compatible sites  
of a custom modified MCS of the pBluescript (KS+) vector. The  
library was normalized in 2 rounds using conditions adapted from  
Scores et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome  
Research 6 (1996): 791, except that a significantly longer

reannealing hybridization was used. Clones available from the ARK-Genomics Centre for Functional Genomics in Farm Animals, Roslin Institute, Midlothian, EH25 9PS, UK see [www.ark-genomics.org](http://www.ark-genomics.org).

Submitted (21-NOV-2002) Balzerque S., UMRGV, INRA/CNRS, 2 rue

Gaston Cremieux, 91057 Evry cedex, FRANCE

PCR was performed on DNA from transformants of Arabidopsis thaliana

plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at <http://dbgap.versailles.inra.fr/publiclines/>. This sequence has been generated in the framework of the French plant genomics program "Genoplante" (<http://www.genoplante.com> and <http://genoplante-info.infobiogen.fr>).

 PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at <http://dbsgap.versailles.inra.fr/publiclines/>. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (<http://www.genoplante.com> and <http://genoplante-info.infobiogen.fr>).

 JOURNAL Submitted (23-OCT-2003) Balzerque S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Evry cedex, FRANCE  
 PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at <http://dbsgap.versailles.inra.fr/publiclines/>. This sequence has been generated in the framework of the French plant genomics

program 'Genoplatne' (<http://www.genoplatne.com> and  
<http://genoplatne-info.infobiogen.fr>).

Balzerque, S.  
Direct Submision  
Submitted (23-OCT-2003) Balzerque S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Evry cedex, FRANCE  
PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at <http://dbsgap.versailles.inra.fr/publiclines/>. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (<http://www.genoplante.com> and <http://genoplante-info.infobiogen.fr>).

Gaston Creteil, 91057 Evry cedex, FRANCE  
COMMENT PCR was performed on DNA from transformants of Arabidopsis thaliana  
plants from INRA (Versailles). The DNA fragment(s) resulting from  
the PCR were directly sequenced from the left or the right border  
to determine the genomic sequence flanking the insertion. T-DNA  
derived sequences were removed. Information to order the  
graphical display of the insertion site are available at  
<http://dbsgap.versailles.inra.fr/publiclines/>. This sequence has  
been generated in the framework of the French plant genomics  
program 'Genoplante' (<http://www.genoplante.com> and  
<http://genoplante-info.infobiogen.fr>).

**COMMENT** This GSS is part of a random genomic sequencing program of thirteen yeast species: *Saccharomyces bayanus* var. uvarum, *Saccharomyces exiguus*, *Saccharomyces servazii*, *Zygosaccharomyces rouxii*, *Saccharomyces kluyveri*, *Kluyveromyces thermotolerans*, *Kluyveromyces lactis* var. *lactis*, *Kluyveromyces marxianus* var. *marxianus*, *Pichia angusta*, *Debaryomyces hansenii* var. *hansenii*, *Pichia sorbitophila*, *Candida tropicalis* and *Yarrowia lipolytica*. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.

 TITLE Submitted (23-OCT-2003) Balergue S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Evry cedex, FRANCE  
 COMMENT PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at <http://dbsgap.versailles.inra.fr/publiclines/>. This sequence has been generated in the framework of the French plant genomes program 'Genoplante' (<http://www.genoplante.com> and <http://genoplante-info.infobiogen.fr>). Location/Qualifiers

Single pass sequencing. Bases called and trimmed with phred v0.020425.c. Vector identified by cross\_match with the -mismscore 20 and -mismatch 12 options. Vector:pbLuescriptII(KS+). R. Site 1: EcoRI R. Site 2: NotI Description: Normalised library constructed from pooled tissue from day 30 placentas. Clones available from UK Centre for Functional Genomics in Farm Animals, Roslin Institute, Roslin, Midlothian, UK, EH25 9PS, www.atkgenomics.org.

## COMMENT

This GSS is part of a random genomic sequencing program of thirteen  
 yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces  
 ecklinus, Saccharomyces servazzii, Zygosaccharomyces rouxii,  
 Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces  
 lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia  
 angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,  
 Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to  
 5 kb were prepared and both extremities were sequenced. See  
 keywords for description of this sequence and for the sequence of  
 the other extremity of this insert.
